Dear Mr. Romine:

I'm writing regarding the 224-B Plutonium Concentration Facility. It is important to decontaminate these old Hanford structures. In doing so, we must be sure to not create more & worse problems. Separation of toxics from radioactive materials must not become an excuse a "by accident" event of releasing either toxics or radioactivity. I have noticed vineyards across the river. Orchards, too. Have radioactivity & toxics levels been measured there? We eat these foods, so measurements must be made in adjacent areas. High level wastes must be solidified into glass. Toxics must be treated according to best practices.

Please send a copy of my letter to Craig Cameron, too.

Thank you very much!

Sincerely,

Nancy N. Kroening
