HANFORD ... SCIENCE
JUL 1 8 2001

July 12, 2001

To Whom it May Concern,

I am writing in support of Alternative #3 for Hanford Reactor B. My mother was a young teen when she and her family were required to leave their home in Hanford. Knowing only that this abrupt departure was necessary in support of the United States war effort, they willingly disrupted their lives and were proud to do their patriotic duty. I, and my family, believe that it is important that the history of Hanford/Whitebluffs before, during and after WWII be preserved; and that it be preserved in such a way as to emphasize the impact on the individuals and families involved, and not only our society as a whole.

Choosing option #3 creates the possibility for Reactor B to become a museum in the future where many can come to experience the Hanford that is much more than just a toxic waste dump. Choosing option #3 provides a poignant opportunity for those who would come to visit to consider the bigger picture of what Hanford really represents. Please choose Alternative #3.

Sincerely Yours,

Carol Stickney
