T PLANT OPERATION LOGBOOK

0033513

0650: Operators completed the liquid waste transfer from Tank 5-7 and the 2706-T Sump to the 15-1 Tank. A total of 8100 gallons of liquid waste was transferred. Efforts will be made to obtain process samples and ship these samples to the labs for analysis.

0740: Reviewed the 234-5Z power operators logbook, essential equipment log and OSR data sheet. No abnormal conditions were reported.

0750: Fire department has taken the linear detectors out of service in the T-Plant galleries to support maintenance.

0840: Operators have entered the 221-T Tunnel to continue repackaging "T-Farm" soil drums, per SDAR.

0925: Operators and HPT held pre-job safety meeting and then entered the 221-T Canyon to obtain the tank 15-1 process samples.

1010: Maintenance Instrument tech. attempted to blow down the tank dip legs per work plan and discovered that additional steps need to be added to work package. Therefore a J-7 will be incorporated into work package and work will continue.

1020: Members of Geo Engineering are at T-Plant to obtain an additional ten core samples near the "R" doors. These samples will be 2" diameter.

1100: Operator contacted B-Plant to have them pick-up the tank 15-1 process sample.

1200: HPT manager reports that an HPT has found direct contamination outside of a controlled area at R-13 and R-15. The contamination level is 65,000 d/m. Occurrence Report Rep. was notified.
