U PLANT AREA WASTE SITES PROPOSED PLAN
(200-UW-1 OPERABLE UNIT)

FORMAL WRITTEN COMMENT

1. Basis for final extent of Hanford Cleanup must include Consideration by all Stakeholders of using the total site as a "Hanford Nuclear National Park" (Could save $Bs and lots of time and less risk to workers and less newly generated RA waste!
2. Final utilization must assure safety of public, environment, groundwater, Columbia River Corridor - but also be cost effective for our USA - don't bankrupt our Country.
3. Recharacterize waste as cleaned up - may be easier or more difficult as progresses and need different alternative applied.
4. Most all plant sites have Rail Tunnel access which now have very high R/A equipment scrap etc stored or disposed of, What approach is considered safe, cost effective and low risk to personal.
5. The real bad stuff in bottom of Tanks, Trenches, Basins cribs, etc takes lots of extra time and dollars to completely (near all) retrieve - use more realistic approach. The U.S. DOE is trying to help in this area - Quit worrying about Jobs at Hanford and work together for best of our Col River Corridor and Our USA!
