Dear Sir:

In regard to your request for comment on the Proposed Cleanup Plan for Hanford's 105 B Reactor Facility, I would like to make a strong recommendation for alternative #3.

I was a shift supervisor in the control room of 105B when it first went into operation. I was involved in reactor operation until August 1945 when du Pont transferred me back to Charleston, W. Va.

I have been disappointed that the United States has not developed nuclear power to the degree that France & Japan and other countries have.

I believe a B reactor museum can help educate our country in what has been done & can be done in the future.

Yours truly, Thomas B. Kelly
