Mr. Douglas R. Sherwood
Hanford Project Manager
U. S. Environmental Protection Agency
712 Swift Boulevard, Suite 5
Richland, Washington 99352

Dear Messrs. Lundstrom and Sherwood:

SUBMITTAL OF VALIDATED DATA FOR THE 218 E-8 BORROW PIT DEMOLITION SITE SOIL SAMPLING (T-2-1) AND THE 200 WEST AREA ASH PIT DEMOLITION SITE SOIL SAMPLING (T-2-2)

Enclosed are the data validation packages for the 218 E-8 Borrow Pit Demolition Site (218 E-8) and the 200 West Area Ash Pit Demolition Site (Ash Pit). The 218 E-8 is an interim status treatment unit, which is located in the 200 East Area of the Hanford Site. The Ash Pit is an interim status treatment unit, which is located in the 200 West Area of the Hanford Site. Both the 218 E-8 and the Ash Pit are being closed under the Resource Conversation and Recovery Act. The data packages include inorganic and organic analyses on soil samples collected at both sites in July 1994. The analyses were performed by IT-Quanterra Laboratory.

The data packages have been validated by Golder Associates, Incorporated for Westinghouse Hanford Company (WHC). Data validation activities were performed in accordance with Level D as defined in Data Validation Procedures for Chemical Analysis (WHC-SD-EN-SPP-002). Level D validation includes evaluation and qualification of results based on analytical holding times, method blank results, matrix spikes and duplicates, surrogate recoveries, and analytical method blanks.

MEMORANDUM

TO: Borrow Pit Demo Project QA Record — October 3, 1994

FR: Sandra Schildt, Golder Associates Inc.

RE: NITROEXPLOSIVES DATA VALIDATION SUMMARY FOR DATA PACKAGE W0131-QES-139 (943-1610.005,W0131.GC)

INTRODUCTION

This memorandum presents the results of data validation on data package W0131-QES-139 prepared by International Technology Corporation. A list of the samples validated along with the analytes reported and the method of analysis is provided in the following table.

SAMPLE ID	SAMPLE DATE	MEDIA	ANALYSIS
B0C961	7/12/94	SOIL	SEE NOTE 1
B0C962	7/12/94	SOIL	
B0C963	7/12/94	SOIL	
B0C964	7/12/94	SOIL	
B0C965	7/12/94	SOIL	
B0C966	7/12/94	SOIL	
B0C967	7/12/94	SOIL	
B0C968	7/12/94	SOIL	
B0C969	7/12/94	SOIL	
B0CBN1	7/12/94	SOIL	

OCT 1994
RECEIVED
TQO

Note 1: The samples were analyzed for nitroexplosives using SW-846 8330 methods.

Data validation was conducted in accordance with the WHC statement of work (WHC 1994) and validation procedures (WHC 1993). Attachments 1 through 5 to this memo provide the following information:

Attachment 1. Glossary of Data Reporting Qualifiers
Attachment 2. Summary of Data Qualifications
Attachment 3. Qualified Data Summary and Annotated Laboratory Reports
Attachment 4. Laboratory Narrative and Chain-of-Custody Documentation
Attachment 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

This section presents a summary of the data quality in terms of the referenced validation criteria.

Precision. Goals for precision were met.

Accuracy. Goals for accuracy were met.

Sample Result Verification. All sample results were supported in the raw data.

Detection Limit. Detection limit goals were met for all sample results as specified in the reference analytical method.

Completeness. The data package was complete for all requested analyses. Ten samples (10) were validated in this data set with a total of 120 determinations reported, all of which were deemed valid. This results in a completeness of 100% which meets normal work plan objectives of 90%.

MAJOR DEFICIENCIES

No major deficiencies were identified during data validation which required qualification of data as unusable.

MINOR DEFICIENCIES

The no minor deficiencies were identified during validation which required qualification of data.

FIELD QUALITY CONTROL

Sample B0C962 was identified as a field duplicate, and sample B0C964 was identified as an equipment blank.

- Relative percent difference (RPD) values were within control limits for the field duplicate.
- No compounds were detected in the field blank.

GLOSSARY OF DATA REPORTING QUALIFIERS

GLOSSARY OF ORGANIC DATA REPORTING QUALIFIERS

B - Indicates the constituent was analyzed for and detected in the associated laboratory blank. This qualifier is applied by the laboratory. During the process of data validation this qualifier may be replaced by other appropriate qualifiers as defined by the validation procedures. The associated data should be considered usable for decision making purposes.

U - Indicates the constituent was analyzed for and not detected. The concentration reported is the sample quantitation limit corrected for aliquot size, dilution and percent solids (in the case of solid matrices) by the laboratory. The associated data should be considered usable for decision making purposes.

UJ - Indicates the constituent was analyzed for and not detected. Due to a minor quality control deficiency identified during data validation the concentration reported may not accurately reflect the sample quantitation limit. The associated data should be considered usable for decision making purposes.

J - Indicates the constituent was analyzed for and detected. This qualifier may be applied by the laboratory to indicate a concentration which is less than the contract required quantitation limit (CRQL) but greater than the instrument detection limit (IDL). During data validation this qualifier may be applied to indicate a minor quality control deficiency. However in either case, the associated data should be considered usable for decision making purposes.

NJ - Indicates presumptive evidence of a constituent at an estimated value. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

N - Indicates presumptive evidence of a constituent. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

JN - Indicates a tentatively identified compound (TIC) whose concentration and identification have been determined to be valid as a result of data validation. The associated data should be considered usable for decision making purposes.

UJN- Indicates a tentatively identified compound (TIC) that has been determined to be presumptive and valid (JN) in terms of identification and quantitation and has been qualified as undetected due to associated blank contamination.

UR - Indicates the constituent was analyzed for and not detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

R - Indicates the constituent was analyzed for and detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

CERTIFICATE OF ANALYSIS

IT Corporation
2800 George Washington Way
Richland, WA 99352
Attn: Van Pettey

August 22, 1994

SEP 1994
RECEIVED
SDLA

Job Number: 855

This is the Certificate of Analysis for the following samples:

SDG:	W0131
Client Project ID:	WHC SAF 94-330 218-E-8 Borrow Pit Demolition Site Closure Plan
Received by Knoxville:	July 19, 1994
Number of Samples:	Eleven (11)
Sample Type:	Soil

I. Introduction

On July 15, 1994, eleven (11) soil samples arrived at ITAS-Richland, Washington and were transferred to ITAS-Knoxville for chemical analysis. The list of analytical tests performed, as well as date of receipt and analysis, can be found in the attached report.

II. Analytical Results/Methodology

The analytical results for this report are presented by analytical test. Each set of data will include sample identification information and the analytical results.

The samples were analyzed for Appendix IX volatile and semivolatile organic compounds by gas chromatography/mass spectroscopy (GS/MS) based on EPA SW-846 methods 8240 and 8270.

II. Analytical Results/Methodology (Continued)

The samples were analyzed for nitrate-nitrite based on EPA method 353.2.

The samples were analyzed for anions by ion chromatography using EPA method 300.0.

The samples were analyzed for nitroexplosives by high performance liquid chromatography (HPLC) based on draft EPA method 8330.

III. Quality Control

The volatiles analyses were performed by purge and trap with a J & W DB-624 capillary column on a Finnigan INCOS 500 GC/MS/DS. A matrix spike and matrix spike duplicate were analyzed using sample BOC961. All QC results met method specified limits.

The semivolatiles analyses were performed by direct injection of sample extract on a Restek XTI-5 capillary column on a Finnigan 4500 GC/MS/DS. Daily calibrations were performed for the usual 8270 targets and for the additional Appendix IX compounds. The samples did not contain any Appendix IX compounds. A matrix spike and matrix spike duplicate were analyzed using sample BOC961. The matrix spike and matrix spike duplicate passed all QC criteria as did the laboratory control sample.

Data were reported with qualifiers as follows:

U - Compound analyzed for but not detected; value given is quantitation limit.
E - Compound exceeded calibration range.
D - Compound analyzed at a secondary dilution factor.
J - Compound detected but below quantitation limit; value estimated.
S - Spiked compound.
B - Compound found in method blank.
A - Suspected aldol condensation product.
Y - Indistinguishable isomer in tentatively identified compounds.
N - Presumptive evidence of compound presence.

The samples were analyzed for nitrate/nitrite on July 26, 1994. A matrix spike and matrix spike duplicate were analyzed using sample BOC961. All QC results were acceptable.

III. Quality Control (Continued)

The samples were analyzed for fluoride, chloride, phosphate, nitrate, nitrite and sulfate by EPA method 300.0 on August 2 and 3, 1994. A matrix spike and matrix spike duplicate were analyzed using sample BOC961. All quality control results were acceptable; chloride for the matrix spike was slightly outside acceptance limits due to matrix interferences. The laboratory control sample (LCS) results were within acceptance limits.

The samples were analyzed for nitroexplosives on August 12 and 13, 1994. A matrix spike and matrix spike duplicate were analyzed using sample BOC961. All QC results were acceptable.

MEMORANDUM

TO: Borrow Pit Demo Project QA Record October 3, 1994

FR: Sandra Schildt, Golder Associates Inc.

RE: GENERAL CHEMISTRY DATA VALIDATION SUMMARY FOR DATA PACKAGE W0131-QES-139 (943-1610.005,W0131.VOA)

INTRODUCTION

This memorandum presents the results of data validation on data package W0131-QES-139 prepared by International Technology Corporation. A list of the samples validated along with the analytes reported and the method of analysis is provided in the following table.

SAMPLE ID	SAMPLE DATE	MEDIA	ANALYSIS
B0C961	7/12/94	SOIL	SEE NOTE 1
B0C962	7/12/94	SOIL	
B0C963	7/12/94	SOIL	
B0C964	7/12/94	SOIL	
B0C965	7/12/94	SOIL	
B0C966	7/12/94	SOIL	
B0C967	7/12/94	SOIL	
B0C968	7/12/94	SOIL	
B0C969	7/12/94	SOIL	
B0CBN1	7/12/94	SOIL	

Note 1: The samples were analyzed for anions and nitrate/nitrite using SW-846 methods.

OCT 1994
RECEIVED
TQO

Data validation was conducted in accordance with the WHC statement of work (WHC 1994) and validation procedures (WHC 1993). Attachments 1 through 5 to this memo provide the following information:

Attachment 1. Glossary of Data Reporting Qualifiers
Attachment 2. Summary of Data Qualifications
Attachment 3. Qualified Data Summary and Annotated Laboratory Reports
Attachment 4. Laboratory Narrative and Chain-of-Custody Documentation
Attachment 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

This section presents a summary of the data quality in terms of the referenced validation criteria.

Precision. Goals for precision were met.

Accuracy. Goals for accuracy were met with the exception of minor deficiencies described below.

Sample Result Verification. All sample results were supported in the raw data.

Detection Limits. Detection limit goals specified in the data validation procedures were exceeded for all anion sample results.

Completeness. The data package was complete for all requested analyses. Ten samples (10) were validated in this data set with a total of 70 determinations reported, of which 64 were deemed valid. This results in a completeness of 91% which meets normal work plan objectives of 90%.

MAJOR DEFICIENCIES

The following major deficiencies were identified during data validation which required qualification of data as unusable.

Holding Time

- All nondetected results for nitrite and phosphate were rejected due to exceedance of the holding time by more than twice the specified holding time.

MINOR DEFICIENCIES

The following minor deficiencies were identified during validation which required qualification of data.

Holding Time

- The holding time for nitrate, nitrite, and phosphate was exceeded by more than two times the holding time. Attachments 2 and 5 provide a summary of the samples and data qualification applied.

Spike Samples

- Sample spike recovery of chloride exceeded control limits. Attachments 2 and 5 provide a summary of the samples and data qualification applied.

FIELD QUALITY CONTROL

Sample B0C962 was identified as a field duplicate, and sample B0C964 was identified as an equipment blank.

- The relative percent difference (RPD) values for the duplicate were within the limits specified in the work plan.

- Chloride, nitrate, and sulfate were detected in the equipment blank.

WHC 1993b, Data Validation Procedures for Chemical Analyses, WHC-SD-EN-SPP-002, Rev. 2, 1993, Westinghouse Hanford Company, Richland, Washington.

GLOSSARY OF DATA REPORTING QUALIFIERS

GLOSSARY OF INORGANIC DATA REPORTING QUALIFIERS

B - Indicates the constituent was analyzed for and detected. The concentration reported is less than the contract required detection limit (CRDL) but greater than the instrument detection limit (IDL). The associated data should be considered usable for decision making purposes.

U - Indicates the constituent was analyzed for and not detected. The concentration reported is the sample detection limit corrected for sample aliquot size, dilution factors and percent solids (in the case of solid matrices) by the laboratory. The associated data should be considered usable for decision making purposes.

UJ - Indicates the constituent was analyzed for and was not detected. Due to a minor quality control deficiency identified during data validation, the concentration reported may not accurately reflect the sample detection limit. The associated data have been qualified as estimated but should be considered usable for decision making purposes.

BJ - Indicates the constituent was analyzed for and detected at a concentration less than the CRDL but greater then the IDL. Due to a minor quality control deficiency identified during data validation, The associated data have been qualified as estimated, but should be considered usable for decision making purposes.

J - Indicates the constituent was analyzed for and detected. Due to a minor quality control deficiency identified during data validation the associated data have been qualified as estimated, but should be considered usable for decision making purposes.

UR - Indicates the constituent was analyzed for and not detected. Due to a major quality control deficiency identified during data validation, the associated data have been qualified as unusable for decision making purposes.

R - Indicates the constituent was analyzed for and detected. Due to a major quality control deficiency identified during data validation, the associated data have been qualified as unusable for decision making purposes.

CERTIFICATE OF ANALYSIS

IT Corporation
2800 George Washington Way
Richland, WA 99352
Attn: Van Pettey

August 22, 1994

SEP 1994 RECEIVED SDLA

Job Number: 855

This is the Certificate of Analysis for the following samples:

SDG:	W0131
Client Project ID:	WHC SAF 94-330 218-E-8 Borrow Pit Demolition Site Closure Plan
Received by Knoxville:	July 19, 1994
Number of Samples:	Eleven (11)
Sample Type:	Soil

I. Introduction

On July 15, 1994, eleven (11) soil samples arrived at ITAS-Richland, Washington and were transferred to ITAS-Knoxville for chemical analysis. The list of analytical tests performed, as well as date of receipt and analysis, can be found in the attached report.

II. Analytical Results/Methodology

The analytical results for this report are presented by analytical test. Each set of data will include sample identification information and the analytical results.

The samples were analyzed for Appendix IX volatile and semivolatile organic compounds by gas chromatography/mass spectroscopy (GS/MS) based on EPA SW-846 methods 8240 and 8270.

IT ANALYTICAL SERVICES
5815 MIDDLEBROOK PIKE
KNOXVILLE, TN

II. Analytical Results/Methodology (Continued)

The samples were analyzed for nitrate-nitrite based on EPA method 353.2.

The samples were analyzed for anions by ion chromatography using EPA method 300.0.

The samples were analyzed for nitroexplosives by high performance liquid chromatography (HPLC) based on draft EPA method 8330.

III. Quality Control

The volatiles analyses were performed by purge and trap with a J & W DB-624 capillary column on a Finnigan INCOS 500 GC/MS/DS. A matrix spike and matrix spike duplicate were analyzed using sample BOC961. All QC results met method specified limits.

The semivolatiles analyses were performed by direct injection of sample extract on a Restek XTI-5 capillary column on a Finnigan 4500 GC/MS/DS. Daily calibrations were performed for the usual 8270 targets and for the additional Appendix IX compounds. The samples did not contain any Appendix IX compounds. A matrix spike and matrix spike duplicate were analyzed using sample BOC961. The matrix spike and matrix spike duplicate passed all QC criteria as did the laboratory control sample.

Data were reported with qualifiers as follows:

U - Compound analyzed for but not detected; value given is quantitation limit.
E - Compound exceeded calibration range.
D - Compound analyzed at a secondary dilution factor.
J - Compound detected but below quantitation limit; value estimated.
S - Spiked compound.
B - Compound found in method blank.
A - Suspected aldol condensation product.
Y - Indistinguishable isomer in tentatively identified compounds.
N - Presumptive evidence of compound presence.

The samples were analyzed for nitrate/nitrite on July 26, 1994. A matrix spike and matrix spike duplicate were analyzed using sample BOC961. All QC results were acceptable.

IT Corporation
August 22, 1994
Job Number: 855
Client Project ID: WHC SAF 94-330 218-E-8 Borrow Pit Demolition Site Closure Plan

III. Quality Control (Continued)

The samples were analyzed for fluoride, chloride, phosphate, nitrate, nitrite and sulfate by EPA method 300.0 on August 2 and 3, 1994. A matrix spike and matrix spike duplicate were analyzed using sample BOC961. All quality control results were acceptable; chloride for the matrix spike was slightly outside acceptance limits due to matrix interferences. The laboratory control sample (LCS) results were within acceptance limits.

The samples were analyzed for nitroexplosives on August 12 and 13, 1994. A matrix spike and matrix spike duplicate were analyzed using sample BOC961. All QC results were acceptable.

MEMORANDUM

TO: Borrow Pit Demo Project QA Record — October 3, 1994

FR: Sandra Schildt, Golder Associates Inc.

RE: SEMIVOLATILES DATA VALIDATION SUMMARY FOR DATA PACKAGE W0131-QES-139 (943-1610.005,W0131.SV)

INTRODUCTION

This memorandum presents the results of data validation on data package W0131-QES-139 prepared by International Technology Corporation. A list of the samples validated along with the analytes reported and the method of analysis is provided in the following table.

SAMPLE ID	SAMPLE DATE	MEDIA	ANALYSIS
B0C961	7/12/94	SOIL	SEE NOTE 1
B0C962	7/12/94	SOIL	
B0C963	7/12/94	SOIL	
B0C964	7/12/94	SOIL	

Note 1: The samples were analyzed for semivolatile organics using SW-846 8240/8270 methods.

Data validation was conducted in accordance with the WHC statement of work (WHC 1994) and validation procedures (WHC 1993). Attachments 1 through 5 to this memo provide the following information:

Attachment 1. Glossary of Data Reporting Qualifiers
Attachment 2. Summary of Data Qualifications
Attachment 3. Qualified Data Summary and Annotated Laboratory Reports
Attachment 4. Laboratory Narrative and Chain-of-Custody Documentation
Attachment 5. Data Validation Supporting Documentation

OCT 1994
RECEIVED
TQO

DATA QUALITY OBJECTIVES

This section presents a summary of the data quality in terms of the referenced validation criteria.

Precision. Goals for precision were met.

Accuracy. Goals for accuracy were met.

Sample Result Verification. All sample results were supported in the raw data.

Detection Limits. Detection limit goals were met for all sample results as specified in the reference analytical method.

Completeness. The data package was complete for all requested analyses. Four samples (4) were validated in this data set with a total of 460 determinations reported, all of which were deemed valid. This results in a completeness of 100% which meets normal work plan objectives of 90%.

MAJOR DEFICIENCIES

No major deficiencies were identified during data validation which required qualification of data as unusable.

MINOR DEFICIENCIES

The following minor deficiencies were identified during validation which required qualification of data.

FIELD QUALITY CONTROL

Sample B0C962 was identified as a field duplicate and sample B0C964 was identified as an equipment blank.

- The field duplicate sample contained tentatively identified compounds (TICs) not found in the original sample. No other constituents were detected in the duplicate with the exception of di-n-butylphthalate which was reported at a concentration less than the quantitation limit. Detection limits for the remaining compounds were comparable between the original and duplicate sample.

- Bis(2-ethylhexyl)phthalate, di-N-butylphthalate, and TICs were detected in the equipment blank.

TENTATIVELY IDENTIFIED COMPOUND EVALUATION

- One unknown TIC was re-evaluated and identified as 2-methoxy-2-propoxy propane.

- One TIC was reported in the laboratory blanks and the samples at concentrations within 5x the blank concentration. The associated sample results have been qualified as undetected (U).

- Aldol reaction products have been rejected (R).

- Tentatively identified compounds were detected and deemed estimated and presumptive (JN).

ATTACHMENT 1

GLOSSARY OF DATA REPORTING QUALIFIERS

GLOSSARY OF ORGANIC DATA REPORTING QUALIFIERS

B - Indicates the constituent was analyzed for and detected in the associated laboratory blank. This qualifier is applied by the laboratory. During the process of data validation this qualifier may be replaced by other appropriate qualifiers as defined by the validation procedures. The associated data should be considered usable for decision making purposes.

U - Indicates the constituent was analyzed for and not detected. The concentration reported is the sample quantitation limit corrected for aliquot size, dilution and percent solids (in the case of solid matrices) by the laboratory. The associated data should be considered usable for decision making purposes.

UJ - Indicates the constituent was analyzed for and not detected. Due to a minor quality control deficiency identified during data validation the concentration reported may not accurately reflect the sample quantitation limit. The associated data should be considered usable for decision making purposes.

J - Indicates the constituent was analyzed for and detected. This qualifier may be applied by the laboratory to indicate a concentration which is less than the contract required quantitation limit (CRQL) but greater than the instrument detection limit (IDL). During data validation this qualifier may be applied to indicate a minor quality control deficiency. However in either case, the associated data should be considered usable for decision making purposes.

NJ - Indicates presumptive evidence of a constituent at an estimated value. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

N - Indicates presumptive evidence of a constituent. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

JN - Indicates a tentatively identified compound (TIC) whose concentration and identification have been determined to be valid as a result of data validation. The associated data should be considered usable for decision making purposes.

UJN- Indicates a tentatively identified compound (TIC) that has been determined to be presumptive and valid (JN) in terms of identification and quantitation and has been qualified as undetected due to associated blank contamination.

UR - Indicates the constituent was analyzed for and not detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

R - Indicates the constituent was analyzed for and detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

CERTIFICATE OF ANALYSIS

IT Corporation
2800 George Washington Way
Richland, WA 99352
Attn: Van Pettey

August 22, 1994

SEP 1994 RECEIVED SDLA

Job Number: 855

This is the Certificate of Analysis for the following samples:

SDG:	W0131
Client Project ID:	WHC SAF 94-330 218-E-8 Borrow Pit Demolition Site Closure Plan
Received by Knoxville:	July 19, 1994
Number of Samples:	Eleven (11)
Sample Type:	Soil

I. Introduction

On July 15, 1994, eleven (11) soil samples arrived at ITAS-Richland, Washington and were transferred to ITAS-Knoxville for chemical analysis. The list of analytical tests performed, as well as date of receipt and analysis, can be found in the attached report.

II. Analytical Results/Methodology

The analytical results for this report are presented by analytical test. Each set of data will include sample identification information and the analytical results.

The samples were analyzed for Appendix IX volatile and semivolatile organic compounds by gas chromatography/mass spectroscopy (GS/MS) based on EPA SW-846 methods 8240 and 8270.

IT ANALYTICAL SERVICES
5815 MIDDLEBROOK PIKE
KNOXVILLE, TN

II. Analytical Results/Methodology (Continued)

The samples were analyzed for nitrate-nitrite based on EPA method 353.2.

The samples were analyzed for anions by ion chromatography using EPA method 300.0.

The samples were analyzed for nitroexplosives by high performance liquid chromatography (HPLC) based on draft EPA method 8330.

III. Quality Control

The volatiles analyses were performed by purge and trap with a J & W DB-624 capillary column on a Finnigan INCOS 500 GC/MS/DS. A matrix spike and matrix spike duplicate were analyzed using sample BOC961. All QC results met method specified limits.

The semivolatiles analyses were performed by direct injection of sample extract on a Restek XTI-5 capillary column on a Finnigan 4500 GC/MS/DS. Daily calibrations were performed for the usual 8270 targets and for the additional Appendix IX compounds. The samples did not contain any Appendix IX compounds. A matrix spike and matrix spike duplicate were analyzed using sample BOC961. The matrix spike and matrix spike duplicate passed all QC criteria as did the laboratory control sample.

Data were reported with qualifiers as follows:

U - Compound analyzed for but not detected; value given is quantitation limit.
E - Compound exceeded calibration range.
D - Compound analyzed at a secondary dilution factor.
J - Compound detected but below quantitation limit; value estimated.
S - Spiked compound.
B - Compound found in method blank.
A - Suspected aldol condensation product.
Y - Indistinguishable isomer in tentatively identified compounds.
N - Presumptive evidence of compound presence.

The samples were analyzed for nitrate/nitrite on July 26, 1994. A matrix spike and matrix spike duplicate were analyzed using sample BOC961. All QC results were acceptable.

KNOXVILLE, TN

III. Quality Control (Continued)

The samples were analyzed for fluoride, chloride, phosphate, nitrate, nitrite and sulfate by EPA method 300.0 on August 2 and 3, 1994. A matrix spike and matrix spike duplicate were analyzed using sample BOC961. All quality control results were acceptable; chloride for the matrix spike was slightly outside acceptance limits due to matrix interferences. The laboratory control sample (LCS) results were within acceptance limits.

The samples were analyzed for nitroexplosives on August 12 and 13, 1994. A matrix spike and matrix spike duplicate were analyzed using sample BOC961. All QC results were acceptable.

MEMORANDUM

TO: Borrow Pit Demo Project QA Record October 3, 1994

FR: Sandra Schildt, Golder Associates Inc.

RE: VOLATILES DATA VALIDATION SUMMARY FOR DATA PACKAGE W0131-QES-139 (943-1610.005,W0131.VOA)

INTRODUCTION

This memorandum presents the results of data validation on data package W0131-QES-139 prepared by International Technology Corporation. A list of the samples validated along with the analytes reported and the method of analysis is provided in the following table.

SAMPLE ID	SAMPLE DATE	MEDIA	ANALYSIS
B0C961	7/12/94	SOIL	SEE NOTE 1
B0C962	7/12/94	SOIL	
B0C963	7/12/94	SOIL	
B0C964	7/12/94	SOIL	
B0C965	7/12/94	SOIL	
B0C966	7/12/94	SOIL	
B0C967	7/12/94	SOIL	
B0C968	7/12/94	SOIL	
B0C969	7/12/94	SOIL	
B0CBN1	7/12/94	SOIL	
B0CBN2	7/11/94	SOIL	

OCT 1994
RECEIVED
TQO

Note 1: The samples were analyzed for volatile organics using SW-846 methods.

Data validation was conducted in accordance with the WHC statement of work (WHC 1994) and validation procedures (WHC 1993). Attachments 1 through 5 to this memo provide the following information:

Attachment 1. Glossary of Data Reporting Qualifiers
Attachment 2. Summary of Data Qualifications
Attachment 3. Qualified Data Summary and Annotated Laboratory Reports
Attachment 4. Laboratory Narrative and Chain-of-Custody Documentation
Attachment 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

This section presents a summary of the data quality in terms of the referenced validation criteria.

Precision. Goals for precision were met.

Accuracy. Goals for accuracy were met.

Sample Result Verification. All sample results were supported in the raw data.

Detection Limits. Detection limit goals were met for all sample results as specified in the reference analytical method.

Completeness. The data package was complete for all requested analyses. Eleven samples (11) were validated in this data set with a total of 638 determinations reported, all of which were deemed valid. This results in a completeness of 100% which meets normal work plan objectives of 90%.

MAJOR DEFICIENCIES

No major deficiencies were identified during data validation which required qualification of data as unusable.

MINOR DEFICIENCIES

The following minor deficiencies were identified during validation which required qualification of data.

Blanks

- Methylene chloride and acetone were detected in the laboratory blank. Attachments 2 and 5 provide a summary of the samples and data qualification applied.

FIELD QUALITY CONTROL

Sample B0C962 was identified as a field duplicate, sample B0C964 an equipment blank, and B0CBN2 a trip blank.

- The relative percent difference (RPD) for the field duplicate was within data quality objectives outlined in the work plan.
- Tentatively identified compounds (TICs) were identified in the equipment blank and the trip blank.

TENTATIVELY IDENTIFIED COMPOUND EVALUATION

Tentatively identified compounds (TICs) were reported in the samples and deemed estimated and presumptive (JN).

ATTACHMENT 1

GLOSSARY OF DATA REPORTING QUALIFIERS

GLOSSARY OF ORGANIC DATA REPORTING QUALIFIERS

B - Indicates the constituent was analyzed for and detected in the associated laboratory blank. This qualifier is applied by the laboratory. During the process of data validation this qualifier may be replaced by other appropriate qualifiers as defined by the validation procedures. The associated data should be considered usable for decision making purposes.

U - Indicates the constituent was analyzed for and not detected. The concentration reported is the sample quantitation limit corrected for aliquot size, dilution and percent solids (in the case of solid matrices) by the laboratory. The associated data should be considered usable for decision making purposes.

UJ - Indicates the constituent was analyzed for and not detected. Due to a minor quality control deficiency identified during data validation the concentration reported may not accurately reflect the sample quantitation limit. The associated data should be considered usable for decision making purposes.

J - Indicates the constituent was analyzed for and detected. This qualifier may be applied by the laboratory to indicate a concentration which is less than the contract required quantitation limit (CRQL) but greater than the instrument detection limit (IDL). During data validation this qualifier may be applied to indicate a minor quality control deficiency. However in either case, the associated data should be considered usable for decision making purposes.

NJ - Indicates presumptive evidence of a constituent at an estimated value. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

N - Indicates presumptive evidence of a constituent. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

JN - Indicates a tentatively identified compound (TIC) whose concentration and identification have been determined to be valid as a result of data validation. The associated data should be considered usable for decision making purposes.

UJN- Indicates a tentatively identified compound (TIC) that has been determined to be presumptive and valid (JN) in terms of identification and quantitation and has been qualified as undetected due to associated blank contamination.

UR - Indicates the constituent was analyzed for and not detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

R - Indicates the constituent was analyzed for and detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

CERTIFICATE OF ANALYSIS

IT Corporation
2800 George Washington Way
Richland, WA 99352
Attn: Van Pettey

August 22, 1994

SEP 1994 RECEIVED SDLA

Job Number: 855

This is the Certificate of Analysis for the following samples:

SDG:	W0131
Client Project ID:	WHC SAF 94-330 218-E-8 Borrow Pit Demolition Site Closure Plan
Received by Knoxville:	July 19, 1994
Number of Samples:	Eleven (11)
Sample Type:	Soil

I. Introduction

On July 15, 1994, eleven (11) soil samples arrived at ITAS-Richland, Washington and were transferred to ITAS-Knoxville for chemical analysis. The list of analytical tests performed, as well as date of receipt and analysis, can be found in the attached report.

II. Analytical Results/Methodology

The analytical results for this report are presented by analytical test. Each set of data will include sample identification information and the analytical results.

The samples were analyzed for Appendix IX volatile and semivolatile organic compounds by gas chromatography/mass spectroscopy (GS/MS) based on EPA SW-846 methods 8240 and 8270.

RECORD COPY

IT ANALYTICAL SERVICES
5815 MIDDLEBROOK PIKE
KNOXVILLE, TN

II. Analytical Results/Methodology (Continued)

The samples were analyzed for nitrate-nitrite based on EPA method 353.2.

The samples were analyzed for anions by ion chromatography using EPA method 300.0.

The samples were analyzed for nitroexplosives by high performance liquid chromatography (HPLC) based on draft EPA method 8330.

III. Quality Control

The volatiles analyses were performed by purge and trap with a J & W DB-624 capillary column on a Finnigan INCOS 500 GC/MS/DS. A matrix spike and matrix spike duplicate were analyzed using sample BOC961. All QC results met method specified limits.

The semivolatiles analyses were performed by direct injection of sample extract on a Restek XTI-5 capillary column on a Finnigan 4500 GC/MS/DS. Daily calibrations were performed for the usual 8270 targets and for the additional Appendix IX compounds. The samples did not contain any Appendix IX compounds. A matrix spike and matrix spike duplicate were analyzed using sample BOC961. The matrix spike and matrix spike duplicate passed all QC criteria as did the laboratory control sample.

Data were reported with qualifiers as follows:

U - Compound analyzed for but not detected; value given is quantitation limit.
E - Compound exceeded calibration range.
D - Compound analyzed at a secondary dilution factor.
J - Compound detected but below quantitation limit; value estimated.
S - Spiked compound.
B - Compound found in method blank.
A - Suspected aldol condensation product.
Y - Indistinguishable isomer in tentatively identified compounds.
N - Presumptive evidence of compound presence.

The samples were analyzed for nitrate/nitrite on July 26, 1994. A matrix spike and matrix spike duplicate were analyzed using sample BOC961. All QC results were acceptable.

III. Quality Control (Continued)

The samples were analyzed for fluoride, chloride, phosphate, nitrate, nitrite and sulfate by EPA method 300.0 on August 2 and 3, 1994. A matrix spike and matrix spike duplicate were analyzed using sample BOC961. All quality control results were acceptable; chloride for the matrix spike was slightly outside acceptance limits due to matrix interferences. The laboratory control sample (LCS) results were within acceptance limits.

The samples were analyzed for nitroexplosives on August 12 and 13, 1994. A matrix spike and matrix spike duplicate were analyzed using sample BOC961. All QC results were acceptable.

MEMORANDUM

TO: 200 West Ash Pit Project QA Record September 30, 1994

FR: Thomas Stapp, Golder Associates Inc.

RE: INORGANIC DATA VALIDATION SUMMARY FOR DATA PACKAGE W0130-QES-143 (943-1610.004 143MET.004)

INTRODUCTION

This memo presents the results of data validation on data package W0130-QES-143 prepared by International Technology laboratory. A list of samples validated along with the analyses reported and the methods of analysis is provided in the following table.

SAMPLE ID	SAMPLE DATE	MEDIA	ANALYSES
B0C950	7/12/94	SEDIMENT	SEE NOTE 1
B0C951	7/12/94	SEDIMENT	
B0C952	7/12/94	SEDIMENT	
B0C953	7/12/94	SEDIMENT	
B0C954	7/12/94	SEDIMENT	
B0C955	7/12/94	SEDIMENT	
B0C956	7/12/94	SEDIMENT	
B0C957	7/12/94	SEDIMENT	
B0C958	7/12/94	SEDIMENT	
B0C959	7/12/94	SEDIMENT	
B0C960	7/12/94	SEDIMENT	
B0CBM9	7/12/94	SEDIMENT	

Notes:

1. Indicates the samples were analyzed for target analyte list (TAL) metals, mercury and titanium.

OCT 1994 RECEIVED TQO

Data validation was conducted in accordance with the WHC statement of work (WHC 1994) and validation procedures (WHC 1993). Attachments 1 through 5 provide the following information as indicated below:

Attachment 1. Glossary of Data Reporting Qualifiers
Attachment 2. Summary of Data Qualifications
Attachment 3. Qualified Data Summary and Annotated Laboratory Reports
Attachment 4. Laboratory Narrative and Chain-of-Custody Documentation
Attachment 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

This section presents a summary of the data quality in terms of the referenced validation criteria.

Precision. Goals for precision were met with the exception of deficiencies as indicated below.

Accuracy. Goals for accuracy were met with the exception of deficiencies as indicated below.

Sample Result Verification. All sample results were supported in the raw data.

Detection Limits. Detection limit goals have been met.

Completeness. The data package was complete for all requested analyses. A total of twelve (12) samples were validated in this data package with a total of 276 determinations reported, all of which were deemed valid. This results in a completeness of 100 percent which meets the work plan completeness objective of 90 percent.

MAJOR DEFICIENCIES

No major deficiencies were identified during data validation which required qualification of data as unusable.

MINOR DEFICIENCIES

The following minor deficiencies were identified during data validation which required qualification of data.

Laboratory Blanks

- Copper and arsenic were detected in the laboratory blanks at negative concentrations. Attachments 2 and 5 provide a summary of samples affected, qualification applied and supporting documentation.
- Aluminum, calcium and zinc were detected in the preparation blank. Attachments 2 and 5 provide a summary of samples affected, qualification applied and supporting documentation.

Matrix Spike

- Spike recoveries for antimony, arsenic, copper, manganese and zinc were unacceptabled. Attachments 2 and 5 provide a summary of samples affected, qualification applied and supporting documentation.

ICP Serial Dilution

- The serial dilution result for copper was unacceptable. Attachments 2 and 5 provide a summary of samples affected, qualification applied and supporting documentation.

Analytical Spikes

- The analytical spike recovery for selenium for sample B0C960 was unacceptable. Attachments 2 and 5 provide a summary of qualification applied and supporting documentation.

- Method of standard additions (MSA) was required for arsenic analysis of samples B0C952 and B0C953 but was not performed, therefore associated results have been qualified as estimated (J).

- The correlation coefficient of lead MSA analysis for samples B0C954 and B0C957 was below 0.995, therefore associated results were qualified as estimated (J).

FIELD QC

Equipment Blanks

- Sample B0CBM9 is identified as the equipment blank with positive results reported for iron, titanium, and sodium. See blank summary form B-3. No qualification is required based upon field QC results.

Field Duplicate

- Sample B0C953 is identified as the field duplicate of sample B0C952. The relative percent difference (RPD) was exceeded for aluminum, iron, magnesium, manganese, zinc and titanium. See precision summary form B-5. No qualification is required based upon field QC results.

GLOSSARY OF DATA REPORTING QUALIFIERS

GLOSSARY OF INORGANIC DATA REPORTING QUALIFIERS

B - Indicates the constituent was analyzed for and detected. The concentration reported is less than the contract required detection limit (CRDL) but greater than the instrument detection limit (IDL). The associated data should be considered usable for decision making purposes.

U - Indicates the constituent was analyzed for and not detected. The concentration reported is the sample detection limit corrected for aliquot size, dilution and percent solids (in the case of solid matrices) by the laboratory. The associated data should be considered usable for decision making purposes.

UJ - Indicates the constituent was analyzed for and not detected. Due to a minor quality control deficiency identified during data validation the concentration may not accurately reflect the sample detection limit. The associated data have been qualified as estimated but should be considered usable for decision making purposes.

BJ - Indicates the constituent was analyzed for and detected at a concentration less than the contract required detection limit (CRDL) but greater than the instrument detection limit (IDL). Due to a minor quality control deficiency identified during data validation the associated data have been qualified as estimated, but should be considered usable for decision making purposes.

J - Indicates the constituent was analyzed for and detected. Due to a minor quality control deficiency identified during data validation the associated data have been qualified as estimated, but should be considered usable for decision making purposes.

UR - Indicates the constituent was analyzed for and not detected. Due to a major quality control deficiency identified during data validation, the associated data have been qualified as unusable for decision making purposes.

R - Indicates the constituent was analyzed for and detected. Due to a major quality control deficiency identified during data validation, the associated data have been qualified as unusable for decision making purposes.

Richland, WA 99352
Attn: Van Pettey

August 22, 1994

Job Number: 854

This is the Certificate of Analysis for the following samples:

SDG:	W0130
Client Project ID:	WHC SAF 94-329 200 West Ash Pit Demolition Site Closure Plan
Received by Knoxville:	July 19, 1994
Number of Samples:	Thirteen (13)
Sample Type:	Soil

I. Introduction

On July 15, 1994, thirteen (13) soil samples arrived at ITAS-Richland, Washington and were transferred to ITAS-Knoxville for chemical analysis. The list of analytical tests performed, as well as date of receipt and analysis, can be found in the attached report.

II. Analytical Results/Methodology

The analytical results for this report are presented by analytical test. Each set of data will include sample identification information and the analytical results.

The samples were analyzed for Appendix IX volatile and semivolatile organic compounds by gas chromatography/mass spectroscopy (GS/MS) based on EPA SW-846 methods 8240 and 8270.

Reviewed and Approved:

Sheree A. Schneider

Sheree' A. Schneider

KNOXVILLE, TN

II. Analytical Results/Methodology (Continued)

The samples were analyzed for Target Analyte List (TAL) metals by cold vapor atomic absorption spectroscopy (CVAA), graphite furnace atomic absorption spectroscopy (GFAA), and inductively coupled plasma spectroscopy (ICP) in accordance with the EPA CLP ILM03.0 Statement of Work.

The samples were analyzed for nitrate-nitrite based on EPA method 353.2.

The samples were analyzed for anions by ion chromatography using EPA method 300.0.

The samples were analyzed for nitroexplosives by high performance liquid chromatography (HPLC) based on draft EPA method 8330.

III. Quality Control

The volatiles analyses were performed by purge and trap with a J & W DB-624 capillary column on a Finnigan INCOS 500 GC/MS/DS. A matrix spike and matrix spike duplicate were analyzed using sample BOC950. All QC results met method specified limits.

The semivolatiles analyses were performed by direct injection of sample extract on a Restek XTI-5 capillary column on a Finnigan 4500 XL GC/MS/DS. Sample BOC954 was initially analyzed at a five-fold dilution due to the appearance of the extract. BOC954 required an additional fifty-fold dilution due to target compound concentrations that were greater than the calibration range in the five-fold dilution run. Four surrogate standards were diluted out in the fifty-fold dilution run. Daily calibrations were performed for the usual 8270 targets and for the additional Appendix IX compounds, with the excetpion of the fifty-fold dilution of BOC954. No Appendix IX calibration was performed on the fifty-fold dilution of BOC954 due to no Appendix IX compounds being identified in the five-fold dilution. The samples did not contain any Appendix IX compounds. A matrix spike and matrix spike duplicate were analyzed using sample BOC950. The matrix spike and matrix spike duplicate passed all QC criteria with the exception of 2,4-dinitrotoluene in the matrix spike duplicate, which was one percentage point above the criteria. However, the laboratory control sample did meet all QC criteria.

Data were reported with qualifiers as follows:

U - Compound analyzed for but not detected; value given is quantitation limit.
E - Compound exceeded calibration range.
D - Compound analyzed at a secondary dilution factor.
J - Compound detected but below quantitation limit; value estimated.
S - Spiked compound.

5815 MIDDLEBROOK PIKE
KNOXVILLE, TN

III. Quality Control (Continued)

B - Compound found in method blank.
A - Suspected aldol condensation product.
Y - Indistinguishable isomer in tentatively identified compounds.
N - Presumptive evidence of compound presence.

The samples were digested on July 22, 1994 for ICP and July 22 and August 2, 1994 for GFAA. The CVAA analysis for mercury was performed on July 25, 1994; the GFAA analyses for arsenic, lead, selenium and thallium were performed July 22 thru August 5, 1994; the remaining metals were analyzed by ICP on July 25, 1994. All run QC was acceptable. A duplicate/spike pair was prepared using sample number BOC950. Spike recovery (accuracy) results were within acceptance limits for all parameters except for antimony, arsenic, copper, manganese and zinc. Poor spike recovery for these analytes appears to be attributable to sample nonhomogeneity and matrix interference. Duplicate RPD (precision) results were within acceptance limits for all parameters except for chromium, zinc and titanium, which exhibited slight variations due to sample nonhomogeneity.

Data were reported with qualifiers as follows:

"C" Qualifiers

U - Compound was analyzed for but not detected. The number is the detection limit for the sample.
B - Value greater than instrument detection limit, but less than contract required quantitation limit.

"Q" Qualifiers

* - Duplicate analysis outside control limits.
N - Spiked sample recovery outside control limits.
W - Post-digestion spike for GFAA was out of control limits (85-115%), while sample absorbance was less than 50% of spike absorbance.
S - The reported value was determined by method of standard additions.

"M" Qualifiers

P - Analysis performed by ICP.
V - Analysis performed by CVAA.
F - Analysis performed by GFAA.
C - Cyanide analysis by manual distillation/colorimetric determination.

III. Quality Control (Continued)

Miscellaneous

D - Duplicate.
S - Spike.
NR - Not required.
G - Native analyte > 4 times spike added, therefore, acceptance criteria do not apply.
X - Detection limits higher than normal due to sample matrix interferences.

The samples were analyzed for nitrate/nitrite on July 26, 1994. A matrix spike and matrix spike duplicate were analyzed using sample BOC950. All QC results were acceptable.

The samples were analyzed for fluoride, chloride, phosphate, nitrate, nitrite and sulfate by EPA method 300.0 on August 1 and 2, 1994. A matrix spike and matrix spike duplicate were analyzed using sample BOC950. All QC results were acceptable.

The samples were analyzed for nitroexplosives on August 12, 1994. A matrix spike and matrix spike duplicate were analyzed using sample BOC950. All QC results were acceptable.

6. PRECISION

Were laboratory duplicates analyzed? . . . . . Yes No N/A

Are laboratory duplicate samples RPD values acceptable? ~~Note ①~~ . . . Yes ~~No~~ N/A 9-28

Were ICP serial dilution samples analyzed? . . . . . Yes No N/A

Are ICP serial dilution %D values acceptable? . Note ① . . . Yes No N/A

Are field duplicate RPD values acceptable? . . Note ② . . . Yes No N/A

Are field split RPD values acceptable? . . . . . Yes No N/A

Comments: ① See ICP Serial dilution summary page.
② See Precision summary form B-5. No qualification is required based upon field QC results.

7. FURNACE AA QUALITY CONTROL

Were duplicate injections performed as required? . . . . . Yes No N/A

Are duplicate injection %RSD values acceptable? . . . . . Yes No N/A

Were analytical spikes performed as required? . . . . . Yes No N/A

Are analytical spike recoveries acceptable? . . Note ① . . . Yes No N/A

Was MSA performed as required? . . . . . ② . . . Yes No N/A

Are MSA results acceptable? . . . . . ③ . . . Yes No N/A

Comments: ① See applicable notes on comments page A-22.

8. REPORTED RESULTS AND DETECTION LIMITS

Are results reported for all requested analyses? Note ① . . Yes No N/A

Are all results supported in the raw data? . . . . . Yes No N/A

Are results calculated properly? . . . . . Yes No N/A

Do results meet the CRDLs? . . . . . Yes No N/A

Comments: ① Lab narrative indicates thallium was analyzed, however it was not reported and was not requested on chain of custody.

INORGANIC ANALYSIS DATA VALIDATION CHECKLIST

Comments (attach additional sheets as necessary):

~~① %RSD of 20% exceeded for duplic. injections of As for BOC8MQ; (UJ) qualified.~~

9-28-94

② MSA required for As analysis of BOC952 and BOC953, but was not done; Qualif: (J).

③ Pb analysis by MSA for BOC954 and BOC957 failed to generate correlation coefficient > than 0.995. Qualif. applied: (J).

① Se analysis spike recovery is <85% but above 40% for sample BOC960; Qualif. (UJ).

MEMORANDUM

TO: 200 West Ash Pit Project QA Record — October 3, 1994

FR: Thomas Stapp, Golder Associates Inc.

RE: GENERAL CHEMISTRY DATA VALIDATION SUMMARY FOR DATA PACKAGE W0130-QES-143 (943-1610.004 143GEN.004)

INTRODUCTION

This memo presents the results of data validation on data package W0130-QES-143 prepared by International Technology laboratory. A list of samples validated along with the analyses reported and the methods of analysis is provided in the following table.

SAMPLE ID	SAMPLE DATE	MEDIA	ANALYSES
B0C950	7/12/94	SEDIMENT	SEE NOTE 1
B0C951	7/12/94	SEDIMENT	
B0C952	7/12/94	SEDIMENT	
B0C953	7/12/94	SEDIMENT	
B0C954	7/12/94	SEDIMENT	
B0C955	7/12/94	SEDIMENT	
B0C956	7/12/94	SEDIMENT	
B0C957	7/12/94	SEDIMENT	
B0C958	7/12/94	SEDIMENT	
B0C959	7/12/94	SEDIMENT	
B0C960	7/12/94	SEDIMENT	
B0CBM9	7/12/94	SEDIMENT	

Notes:

1. Indicates the samples were analyzed for Nitrate/Nitrite as N (by colorimetry), and fluoride, chloride, phosphate, and sulfate anions (by ion chromatography).

OCT 1994
RECEIVED
TQO

Data validation was conducted in accordance with the WHC statement of work (WHC 1994) and validation procedures (WHC 1993). Attachments 1 through 5 provide the following information as indicated below:

Attachment 1. Glossary of Data Reporting Qualifiers
Attachment 2. Summary of Data Qualifications
Attachment 3. Qualified Data Summary and Annotated Laboratory Reports
Attachment 4. Laboratory Narrative and Chain-of-Custody Documentation
Attachment 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

This section presents a summary of the data quality in terms of the referenced validation criteria.

Precision. Goals for precision were met.

Accuracy. Goals for accuracy were met with the exception of matrix spike (MS) recoveries for nitate/nitrite as N, as indicated below.

Sample Result Verification. All sample results were supported in the raw data.

Detection Limits. Detection limit goals for fluoride, chloride, sulfate, phosphate, nitrate and nitrite were not met however, no qualification is required.

Completeness. The data package was complete for all requested analyses. A total of twelve (12) samples were validated in this data package with a total of eighty-four determinations reported, 71 of which were deemed valid. This results in a completeness of 85 percent which does not meet the work plan completeness objective of 90 percent.

MAJOR DEFICIENCIES

The following major deficiencies were identified during data validation which required qualification of data as unusable.

Holding Times

- All nitrate, nitrite and phosphate samples, with the exception of sample B0C950, were analyzed at greater than two times the acceptable holding time limit. Non-detect results for phosphate and nitrite have been qualified as unusable (UR). Attachments 2 and 5 provide a summary of the samples affected, qualifications and supporting documentation.

- Analyses for nitrate, nitrite and phosphate were requested by WHC for information purposes only and have been acknowledged to not meet the 48 hour holding time in the case narrative.

MINOR DEFICIENCIES

The following minor deficiencies were identified during data validation which required qualification of data.

Holding Times

- All nitrate, nitrite and phosphate samples, with the exception of sample B0C950, were analyzed at greater than two times the acceptable holding time. Detected results for nitrate and phosphate have been qualified as estimated (J). Attachments 2 and 5 provide a summary of the samples affected, qualifications and supporting documentation.

Spike Recovery

- The matrix spike (MS) recovery for nitrate/nitrite analysis was unacceptable. Attachments 2 and 5 provide a summary of samples affected, qualification applied and supporting documentation.

FIELD QC

Equipment Blanks

- Sample B0CBM9 is identified as an equipment blank. Chloride, nitrate, sulfate, and nitrate/nitrite as N were detected. No qualification is required based upon field blank results.

Field Duplicate

- Sample B0C953 is identified as the field duplicate of sample B0C952 and the RPD of all components are within acceptable limits.

ATTACHMENT 1

GLOSSARY OF DATA REPORTING QUALIFIERS

GLOSSARY OF ORGANIC DATA REPORTING QUALIFIERS

B - Indicates the constituent was analyzed for and detected in the associated laboratory blank. This qualifier is applied by the laboratory. During the process of data validation this qualifier may be replaced by other appropriate qualifiers as defined by the validation procedures. The associated data should be considered usable for decision making purposes.

U - Indicates the constituent was analyzed for and not detected. The concentration reported is the sample quantitation limit corrected for aliquot size, dilution and percent solids (in the case of solid matrices) by the laboratory. The associated data should be considered usable for decision making purposes.

UJ - Indicates the constituent was analyzed for and not detected. Due to a minor quality control deficiency identified during data validation the concentration reported may not accurately reflect the sample quantitation limit. The associated data should be considered usable for decision making purposes.

J - Indicates the constituent was analyzed for and detected. This qualifier may be applied by the laboratory to indicate a concentration which is less than the contract required quantitation limit (CRQL) but greater than the instrument detection limit (IDL). During data validation this qualifier may be applied to indicate a minor quality control deficiency. However in either case, the associated data should be considered usable for decision making purposes.

NJ - Indicates presumptive evidence of a constituent at an estimated value. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

N - Indicates presumptive evidence of a constituent. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

JN - Indicates a tentatively identified compound (TIC) whose concentration and identification have been determined to be valid as a result of data validation. The associated data should be considered usable for decision making purposes.

UJN - Indicates a tentatively identified compound (TIC) that has been determined to be presumptive and valid (JN) in terms of identification and quantitation and has been qualified as undetected (U) due to associated blank contamination.

UR - Indicates the constituent was analyzed for and not detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

R - Indicates the constituent was analyzed for and detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

CERTIFICATE OF ANALYSIS

IT Corporation
2800 George Washington Way
Richland, WA 99352
Attn: Van Pettey

August 22, 1994

Job Number: 854

This is the Certificate of Analysis for the following samples:

SDG:	W0130
Client Project ID:	WHC SAF 94-329 200 West Ash Pit Demolition Site Closure Plan
Received by Knoxville:	July 19, 1994
Number of Samples:	Thirteen (13)
Sample Type:	Soil

I. Introduction

On July 15, 1994, thirteen (13) soil samples arrived at ITAS-Richland, Washington and were transferred to ITAS-Knoxville for chemical analysis. The list of analytical tests performed, as well as date of receipt and analysis, can be found in the attached report.

II. Analytical Results/Methodology

The analytical results for this report are presented by analytical test. Each set of data will include sample identification information and the analytical results.

The samples were analyzed for Appendix IX volatile and semivolatile organic compounds by gas chromatography/mass spectroscopy (GS/MS) based on EPA SW-846 methods 8240 and 8270.

Reviewed and Approved:

Sheree A. Schneider

Job Number: 854
Client Project ID: WHC SAF 94-329 200 West Ash Pit Demolition Site Closure Plan

II. Analytical Results/Methodology (Continued)

The samples were analyzed for Target Analyte List (TAL) metals by cold vapor atomic absorption spectroscopy (CVAA), graphite furnace atomic absorption spectroscopy (GFAA), and inductively coupled plasma spectroscopy (ICP) in accordance with the EPA CLP ILM03.0 Statement of Work.

The samples were analyzed for nitrate-nitrite based on EPA method 353.2.

The samples were analyzed for anions by ion chromatography using EPA method 300.0.

The samples were analyzed for nitroexplosives by high performance liquid chromatography (HPLC) based on draft EPA method 8330.

III. Quality Control

The volatiles analyses were performed by purge and trap with a J & W DB-624 capillary column on a Finnigan INCOS 500 GC/MS/DS. A matrix spike and matrix spike duplicate were analyzed using sample BOC950. All QC results met method specified limits.

The semivolatiles analyses were performed by direct injection of sample extract on a Restek XTI-5 capillary column on a Finnigan 4500 XL GC/MS/DS. Sample BOC954 was initially analyzed at a five-fold dilution due to the appearance of the extract. BOC954 required an additional fifty-fold dilution due to target compound concentrations that were greater than the calibration range in the five-fold dilution run. Four surrogate standards were diluted out in the fifty-fold dilution run. Daily calibrations were performed for the usual 8270 targets and for the additional Appendix IX compounds, with the excetpion of the fifty-fold dilution of BOC954. No Appendix IX calibration was performed on the fifty-fold dilution of BOC954 due to no Appendix IX compounds being identified in the five-fold dilution. The samples did not contain any Appendix IX compounds. A matrix spike and matrix spike duplicate were analyzed using sample BOC950. The matrix spike and matrix spike duplicate passed all QC criteria with the exception of 2,4-dinitrotoluene in the matrix spike duplicate, which was one percentage point above the criteria. However, the laboratory control sample did meet all QC criteria.

Data were reported with qualifiers as follows:

U - Compound analyzed for but not detected; value given is quantitation limit.
E - Compound exceeded calibration range.
D - Compound analyzed at a secondary dilution factor.
J - Compound detected but below quantitation limit; value estimated.
S - Spiked compound.

III. Quality Control (Continued)

B - Compound found in method blank.
A - Suspected aldol condensation product.
Y - Indistinguishable isomer in tentatively identified compounds.
N - Presumptive evidence of compound presence.

The samples were digested on July 22, 1994 for ICP and July 22 and August 2, 1994 for GFAA. The CVAA analysis for mercury was performed on July 25, 1994; the GFAA analyses for arsenic, lead, selenium and thallium were performed July 22 thru August 5, 1994; the remaining metals were analyzed by ICP on July 25, 1994. All run QC was acceptable. A duplicate/spike pair was prepared using sample number BOC950. Spike recovery (accuracy) results were within acceptance limits for all parameters except for antimony, arsenic, copper, manganese and zinc. Poor spike recovery for these analytes appears to be attributable to sample nonhomogeneity and matrix interference. Duplicate RPD (precision) results were within acceptance limits for all parameters except for chromium, zinc and titanium, which exhibited slight variations due to sample nonhomogeneity.

Data were reported with qualifiers as follows:

"C" Qualifiers

U - Compound was analyzed for but not detected. The number is the detection limit for the sample.
B - Value greater than instrument detection limit, but less than contract required quantitation limit.

"Q" Qualifiers

* - Duplicate analysis outside control limits.
N - Spiked sample recovery outside control limits.
W - Post-digestion spike for GFAA was out of control limits (85-115%), while sample absorbance was less than 50% of spike absorbance.
S - The reported value was determined by method of standard additions.

"M" Qualifiers

P - Analysis performed by ICP.
V - Analysis performed by CVAA.
F - Analysis performed by GFAA.
C - Cyanide analysis by manual distillation/colorimetric determination.

III. Quality Control (Continued)

Miscellaneous

D - Duplicate.
S - Spike.
NR - Not required.
G - Native analyte > 4 times spike added, therefore, acceptance criteria do not apply.
X - Detection limits higher than normal due to sample matrix interferences.

The samples were analyzed for nitrate/nitrite on July 26, 1994. A matrix spike and matrix spike duplicate were analyzed using sample BOC950. All QC results were acceptable.

The samples were analyzed for fluoride, chloride, phosphate, nitrate, nitrite and sulfate by EPA method 300.0 on August 1 and 2, 1994. A matrix spike and matrix spike duplicate were analyzed using sample BOC950. All QC results were acceptable.

The samples were analyzed for nitroexplosives on August 12, 1994. A matrix spike and matrix spike duplicate were analyzed using sample BOC950. All QC results were acceptable.

GENERAL CHEMISTRY DATA VALIDATION CHECKLIST

3. INSTRUMENT CALIBRATION

Was initial calibration performed for all applicable analyses? (Yes) No N/A

Are initial calibration results acceptable? . . . . . (Yes) No N/A

Was a calibration check performed for all applicable analyses? (Yes) No N/A NOTE (1)

Are calibration check results acceptable? . . . . . (Yes) No N/A

Comments: (1) Continuing Calibration confirmed by check of % Difference of Standards analysis.

4. BLANKS

Were laboratory blanks analyzed? . . . . . (Yes) No N/A

Are laboratory blank results acceptable? . . . . . (Yes) No N/A

Were field/trip blanks analyzed? Note (1) . . . . . (Yes) No ~~N/A~~ TS 9-27

Are field/trip blank results acceptable? Note (1) . . . . . Yes (No) ~~N/A~~ TS 9-27

Comments: ~~(1) Field/trip blanks were not identified in this SDG but have been requested and will be evaluated in the final data summary.~~ (1) Equipment Blank BCCBM9 has positive results for Chloride, Nitrate, Sulfate and NO_2/NO_3 as N. See attached Lab report sheets (FORM 1's).

TS 9-27-94

5. ACCURACY

Were spike samples analyzed at the required frequency? . . . (Yes) No N/A

Are spike recoveries acceptable? . . Note (1) . . . . . Yes (No) N/A

Were LCS analyses performed at the required frequency? Note (2) Yes (No) N/A

Are LCS recoveries acceptable? . . . . . (Yes) No N/A

Comments: (1) NO_2/NO_3 MS result (64.3%) below required limits. Associated results are qualified (J/UJ). (2) NO_2/NO_3 LCS analysis not performed, however Blank Spikes are acceptable.

6. PRECISION

Were laboratory duplicate samples analyzed at the required frequency? . . . . . (Yes) No N/A

Are laboratory duplicate sample RPD values acceptable? . . . (Yes) No N/A

Are field duplicate RPD values acceptable? Note (1) . . . . . (Yes) No ~~N/A~~ TS 9-27

Are field split RPD values acceptable? . . . . . Yes No ~~N/A~~ ~~TS 9-27~~

Stet TS 9-27

010

GENERAL CHEMISTRY DATA VALIDATION CHECKLIST

Comments: ① Field Duplicate RPD values are within limits for all components.

7. ANALYTE QUANTITATION

Was analyte quantitation performed properly? . . . . . Yes No N/A

Comments:

8. REPORTED RESULTS AND DETECTION LIMITS

Are results reported for all requested analyses? . . . . . Yes No N/A

Are results supported in the raw data? . . . . . Yes No N/A

Are results calculated properly? . . . . . Yes No N/A

Do results meet the CRDLs? . . . . Note ① . . . . . Yes No N/A

Comments:

① CRDL of 0.1 ug/ml for Fluoride, Chloride, Phosphate, Sulfate, Nitrite and Nitrate has not been met. However no qualification will be applied. 9-29-94

MEMORANDUM

TO: 200 West Ash Pit Project QA Record — September 30, 1994

FR: Thomas Stapp, Golder Associates Inc.

RE: EXPLOSIVES DATA VALIDATION SUMMARY FOR DATA PACKAGE W0130-QES-143 (943-1610.004 143EXP.004)

INTRODUCTION

This memo presents the results of data validation on data package W0130-QES-143 prepared by International Technology laboratory. A list of samples validated along with the analyses reported and the methods of analysis is provided in the following table.

SAMPLE ID	SAMPLE DATE	MEDIA	ANALYSES
B0C950	7/12/94	SEDIMENT	SEE NOTE 1
B0C951	7/12/94	SEDIMENT	
B0C952	7/12/94	SEDIMENT	
B0C953	7/12/94	SEDIMENT	
B0C954	7/12/94	SEDIMENT	
B0C955	7/12/94	SEDIMENT	
B0C956	7/12/94	SEDIMENT	
B0C957	7/12/94	SEDIMENT	
B0C958	7/12/94	SEDIMENT	
B0C959	7/12/94	SEDIMENT	
B0C960	7/12/94	SEDIMENT	
B0CBM9	7/12/94	SEDIMENT	

Notes:

1. Indicates the samples were analyzed for Nitroaromatics and Nitramines (by HPLC).

OCT 1994 RECEIVED TQO

Data validation was conducted in accordance with the WHC statement of work (WHC 1994) and validation procedures (WHC 1993). Attachments 1 through 5 provide the following information as indicated below:

Attachment 1. Glossary of Data Reporting Qualifiers
Attachment 2. Summary of Data Qualifications
Attachment 3. Qualified Data Summary and Annotated Laboratory Reports
Attachment 4. Laboratory Narrative and Chain-of-Custody Documentation
Attachment 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

This section presents a summary of the data quality in terms of the referenced validation criteria.

Precision. Goals for precision were met.

Accuracy. Goals for accuracy were met.

Sample Result Verification. All sample results were supported in the raw data.

Detection Limits. Detection limit goals have been met as specified in SW-846 method 8330.

Completeness. The data package was complete for all requested analyses. A total of twelve (12) samples were validated in this data package with a total of 144 determinations reported, all of which were deemed valid. This results in a completeness of 100 percent which meets the work plan completeness objective of 90 percent.

MAJOR DEFICIENCIES

No major deficiencies were identified during data validation which required qualification of data as unusable.

MINOR DEFICIENCIES

No minor deficiencies were identified during data validation which required qualification of data.

FIELD QC

Equipment Blanks

- Sample B0CBM9 is identified as the equipment blank with no detected compounds reported.

Field Duplicate

- Sample B0C953 is identified as the field duplicate of sample B0C952. The RPD of all components are within acceptable limits.

ATTACHMENT 1

GLOSSARY OF DATA REPORTING QUALIFIERS

GLOSSARY OF ORGANIC DATA REPORTING QUALIFIERS

B - Indicates the constituent was analyzed for and detected in the associated laboratory blank. This qualifier is applied by the laboratory. During the process of data validation this qualifier may be replaced by other appropriate qualifiers as defined by the validation procedures. The associated data should be considered usable for decision making purposes.

U - Indicates the constituent was analyzed for and not detected. The concentration reported is the sample quantitation limit corrected for aliquot size, dilution and percent solids (in the case of solid matrices) by the laboratory. The associated data should be considered usable for decision making purposes.

UJ - Indicates the constituent was analyzed for and not detected. Due to a minor quality control deficiency identified during data validation the concentration reported may not accurately reflect the sample quantitation limit. The associated data should be considered usable for decision making purposes.

J - Indicates the constituent was analyzed for and detected. This qualifier may be applied by the laboratory to indicate a concentration which is less than the contract required quantitation limit (CRQL) but greater than the instrument detection limit (IDL). During data validation this qualifier may be applied to indicate a minor quality control deficiency. However in either case, the associated data should be considered usable for decision making purposes.

NJ - Indicates presumptive evidence of a constituent at an estimated value. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

N - Indicates presumptive evidence of a constituent. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

JN - Indicates a tentatively identified compound (TIC) whose concentration and identification have been determined to be valid as a result of data validation. The associated data should be considered usable for decision making purposes.

UJN - Indicates a tentatively identified compound (TIC) that has been determined to be presumptive and valid (JN) in terms of identification and quantitation and has been qualified as undetected (U) due to associated blank contamination.

UR - Indicates the constituent was analyzed for and not detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

R - Indicates the constituent was analyzed for and detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

RECORD COPY

August 22, 1994

Job Number: 854

This is the Certificate of Analysis for the following samples:

SDG:	W0130
Client Project ID:	WHC SAF 94-329 200 West Ash Pit Demolition Site Closure Plan
Received by Knoxville:	July 19, 1994
Number of Samples:	Thirteen (13)
Sample Type:	Soil

I. Introduction

On July 15, 1994, thirteen (13) soil samples arrived at ITAS-Richland, Washington and were transferred to ITAS-Knoxville for chemical analysis. The list of analytical tests performed, as well as date of receipt and analysis, can be found in the attached report.

II. Analytical Results/Methodology

The analytical results for this report are presented by analytical test. Each set of data will include sample identification information and the analytical results.

The samples were analyzed for Appendix IX volatile and semivolatile organic compounds by gas chromatography/mass spectroscopy (GS/MS) based on EPA SW-846 methods 8240 and 8270.

Reviewed and Approved:

Sheree' A. Schneider
Project Manager

KNOXVILLE, TN

II. Analytical Results/Methodology (Continued)

The samples were analyzed for Target Analyte List (TAL) metals by cold vapor atomic absorption spectroscopy (CVAA), graphite furnace atomic absorption spectroscopy (GFAA), and inductively coupled plasma spectroscopy (ICP) in accordance with the EPA CLP ILM03.0 Statement of Work.

The samples were analyzed for nitrate-nitrite based on EPA method 353.2.

The samples were analyzed for anions by ion chromatography using EPA method 300.0.

The samples were analyzed for nitroexplosives by high performance liquid chromatography (HPLC) based on draft EPA method 8330.

III. Quality Control

The volatiles analyses were performed by purge and trap with a J & W DB-624 capillary column on a Finnigan INCOS 500 GC/MS/DS. A matrix spike and matrix spike duplicate were analyzed using sample BOC950. All QC results met method specified limits.

The semivolatiles analyses were performed by direct injection of sample extract on a Restek XTI-5 capillary column on a Finnigan 4500 XL GC/MS/DS. Sample BOC954 was initially analyzed at a five-fold dilution due to the appearance of the extract. BOC954 required an additional fifty-fold dilution due to target compound concentrations that were greater than the calibration range in the five-fold dilution run. Four surrogate standards were diluted out in the fifty-fold dilution run. Daily calibrations were performed for the usual 8270 targets and for the additional Appendix IX compounds, with the excetpion of the fifty-fold dilution of BOC954. No Appendix IX calibration was performed on the fifty-fold dilution of BOC954 due to no Appendix IX compounds being identified in the five-fold dilution. The samples did not contain any Appendix IX compounds. A matrix spike and matrix spike duplicate were analyzed using sample BOC950. The matrix spike and matrix spike duplicate passed all QC criteria with the exception of 2,4-dinitrotoluene in the matrix spike duplicate, which was one percentage point above the criteria. However, the laboratory control sample did meet all QC criteria.

Data were reported with qualifiers as follows:

U - Compound analyzed for but not detected; value given is quantitation limit.
E - Compound exceeded calibration range.
D - Compound analyzed at a secondary dilution factor.
J - Compound detected but below quantitation limit; value estimated.
S - Spiked compound.

IT Corporation

IT ANALYTICAL SERVICES
5815 MIDDLEBROOK PIKE
KNOXVILLE, TN

III. Quality Control (Continued)

B - Compound found in method blank.
A - Suspected aldol condensation product.
Y - Indistinguishable isomer in tentatively identified compounds.
N - Presumptive evidence of compound presence.

The samples were digested on July 22, 1994 for ICP and July 22 and August 2, 1994 for GFAA. The CVAA analysis for mercury was performed on July 25, 1994; the GFAA analyses for arsenic, lead, selenium and thallium were performed July 22 thru August 5, 1994; the remaining metals were analyzed by ICP on July 25, 1994. All run QC was acceptable. A duplicate/spike pair was prepared using sample number BOC950. Spike recovery (accuracy) results were within acceptance limits for all parameters except for antimony, arsenic, copper, manganese and zinc. Poor spike recovery for these analytes appears to be attributable to sample nonhomogeneity and matrix interference. Duplicate RPD (precision) results were within acceptance limits for all parameters except for chromium, zinc and titanium, which exhibited slight variations due to sample nonhomogeneity.

Data were reported with qualifiers as follows:

'C" Qualifiers

U - Compound was analyzed for but not detected. The number is the detection limit for the sample.
B - Value greater than instrument detection limit, but less than contract required quantitation limit.

"O" Qualifiers

* - Duplicate analysis outside control limits.
N - Spiked sample recovery outside control limits.
W - Post-digestion spike for GFAA was out of control limits (85-115%), while sample absorbance was less than 50% of spike absorbance.
S - The reported value was determined by method of standard additions.

"M" Qualifiers

P - Analysis performed by ICP.
V - Analysis performed by CVAA.
F - Analysis performed by GFAA.
C - Cyanide analysis by manual distillation/colorimetric determination.

III. Quality Control (Continued)

Miscellaneous

D - Duplicate.
S - Spike.
NR - Not required.
G - Native analyte > 4 times spike added, therefore, acceptance criteria do not apply.
X - Detection limits higher than normal due to sample matrix interferences.

The samples were analyzed for nitrate/nitrite on July 26, 1994. A matrix spike and matrix spike duplicate were analyzed using sample BOC950. All QC results were acceptable.

The samples were analyzed for fluoride, chloride, phosphate, nitrate, nitrite and sulfate by EPA method 300.0 on August 1 and 2, 1994. A matrix spike and matrix spike duplicate were analyzed using sample BOC950. All QC results were acceptable.

The samples were analyzed for nitroexplosives on August 12, 1994. A matrix spike and matrix spike duplicate were analyzed using sample BOC950. All QC results were acceptable.

1. DATA PACKAGE COMPLETENESS AND CASE NARRATIVE

Is technical verification documentation present? . . . . . Yes No N/A

Is a case narrative present? . . . . . Yes No N/A

Comments:

2. HOLDING TIMES

Are sample holding times acceptable? . . . . . Yes No ~~N/A~~ 9-27-94

Comments:

	Collected	Extracted	Analyzed
All Samples	7-12-94	7-23-94	8-12-94
		(≤ 14 DAYS)	(≤ 40 DAYS)

GENERAL GC DATA VALIDATION CHECKLIST

3. INSTRUMENT CALIBRATION

3.1 INITIAL CALIBRATION

Was an initial calibration performed? . . . . . Yes No N/A

Are %RSD values for calibration or response factors acceptable? . . . . . Note ① . . . . . Yes No N/A

Comments: ① A six level calibration performed with correlation coefficients >0.995.

3.2 CONTINUING CALIBRATION

Was a continuing calibration check performed? . . . . . Yes No N/A

Are %D values for calibration or response factors acceptable? . Yes No N/A

Comments: % Difference values for the recovery percentages of components are calculated from a mid-range Standard concentration.

4. BLANKS

Were laboratory blanks analyzed? . . . . . Yes No N/A

Are laboratory blank results acceptable? . . . . . Yes No N/A

Were field/trip blanks analyzed? . . . Note ① . . . . . Yes No N/A

Are field/trip blank results acceptable? . . . . . Yes No N/A

Comments: ① Equipment blank BOCBM9 is non-detect for all components.

5. ACCURACY

Were surrogates analyzed? . . . . . Yes No N/A

Are surrogate recoveries acceptable? . . . . . Yes No N/A

Were MS/MSD samples analyzed? . . . . . Yes No N/A

Are MS/MSD recoveries acceptable? . . . . . Yes No N/A

Were LCS samples analyzed? . . . . Note ① . . . . . Yes No N/A

Are LCS recoveries acceptable? . . . . . Yes No N/A

MEMORANDUM

TO: 200 WEST ASH PIT Project QA Record — October 11, 1994

FR: Thomas Stapp, Golder Associates Inc.

RE: VOLATILES DATA VALIDATION SUMMARY FOR DATA PACKAGE W0130-QES-143 (943-1610.004 143VOA.004)

INTRODUCTION

This memo presents the results of data validation on data package W0130-QES-143 prepared by International Technology laboratory. A list of samples validated along with the analyses reported and the methods of analysis is provided in the following table.

SAMPLE ID	SAMPLE DATE	MEDIA	ANALYSES
B0C950	7/12/94	SEDIMENT	SEE NOTE 1
B0C951	7/12/94	SEDIMENT	
B0C952	7/12/94	SEDIMENT	
B0C953	7/12/94	SEDIMENT	
B0C954	7/12/94	SEDIMENT	
B0C955	7/12/94	SEDIMENT	
B0C956	7/12/94	SEDIMENT	
B0C957	7/12/94	SEDIMENT	
B0C958	7/12/94	SEDIMENT	
B0C959	7/12/94	SEDIMENT	
B0C960	7/12/94	SEDIMENT	
B0CBM9	7/12/94	SEDIMENT	
B0CBN0	7/11/94	SEDIMENT	

Notes:

1. Indicates the samples were analyzed for Appendix IX volatile organics.

Data validation was conducted in accordance with the WHC statement of work (WHC 1994) and validation procedures (WHC 1993). Attachments 1 through 5 provide the following information as indicated below:

Attachment 1. Glossary of Data Reporting Qualifiers
Attachment 2. Summary of Data Qualifications
Attachment 3. Qualified Data Summary and Annotated Laboratory Reports
Attachment 4. Laboratory Narrative and Chain-of-Custody Documentation
Attachment 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

This section presents a summary of the data quality in terms of the referenced validation criteria.

Precision. Goals for precision were met.

Accuracy. Goals for accuracy were met.

Sample Result Verification. All sample results were supported in the raw data.

10-11-94
Revised

GENERAL GC DATA VALIDATION CHECKLIST

Comments: ① LCS analysis not required since MS/MSD data is provided.

6. PRECISION

Are MS/MSD sample RPD values acceptable? . . . . . Yes No N/A

Are field duplicate RPD values acceptable? . Note ① . . . . Yes No N/A

Are field split RPD values acceptable? . . . . . Yes No N/A

Comments: ① Field duplicate sample BCC953 to sample BCC952 both are non-detect for all components.

7. COMPOUND IDENTIFICATION AND QUANTITATION

Is compound identification acceptable? . . . . . Yes No N/A

Is compound quantitation acceptable? . . . . . Yes No N/A

Comments:

8. REPORTED RESULTS AND DETECTION LIMITS

Are results reported for all requested analyses? . . . . . Yes No N/A

Are all results supported in the raw data? . . . . . Yes No N/A

Do results meet the CRQLs? . Note ① . . . . . Yes No N/A

Comments: ① CRQL's have not been specified for explosives related analytes, however estimated MDL's as given in SW-846 have ~~mer~~ been met. 9-27-94

035

Detection Limits. Detection limit goals were met.

Completeness. The data package was complete for all requested analyses. A total of thirteen (13) samples were validated in this data package with a total of 754 determinations reported, all of which were deemed valid. This results in a completeness of 100 percent which meets the work plan completeness objective of 90 percent.

MAJOR DEFICIENCIES

No major deficiencies were identified during data validation which required qualification of data as unusable.

MINOR DEFICIENCIES

The following minor deficiencies were identified during data validation which required qualification of data.

Holding Times

- The holding times for samples B0C950, B0C951, B0C954, B0C957, and B0C958 were exeeded. Attachments 2 and 5 provide a summary of qualification applied and supporting documentation.

Laboratory Blanks

- Methylene chloride, acetone and toluene were detected in the laboratory method blank. Attachments 2 and 5 provide a summary of samples affected, qualification applied and supporting documentation.

Field QC

Equipment Blanks

- Sample B0CBM9 was identified as the equipment blank and was non-detect for all components except trichloroethene. An unknown TIC was reported at a retention time of 2.23 minutes.

Trip Blanks

- Sample B0CBN0 was identified as the trip blank and was non-detect for all components except an unknown hydrocarbon TIC at a retention time of 17.27 minutes.

Tentatively Identified Compounds

Tentatively identified compounds (TICs) reported by the laboratory were evaluated during validation and qualified as follows:

- TICs were detected in the samples and determined to be valid, resulting in qualification of the results as presumptive and valid (JN).
- TICs were detected in the sample and associated laboratory blank and have been qualified due to associated blank contamination and determined to be presumptive and valid (UJN). Attachments 3 and 5 provide a summary of the sample affected, data qualification applied and supporting documentation.

ATTACHMENT 1

GLOSSARY OF DATA REPORTING QUALIFIERS

GLOSSARY OF ORGANIC DATA REPORTING QUALIFIERS

B - Indicates the constituent was analyzed for and detected in the associated laboratory blank. This qualifier is applied by the laboratory. During the process of data validation this qualifier may be replaced by other appropriate qualifiers as defined by the validation procedures. The associated data should be considered usable for decision making purposes.

U - Indicates the constituent was analyzed for and not detected. The concentration reported is the sample quantitation limit corrected for aliquot size, dilution and percent solids (in the case of solid matrices) by the laboratory. The associated data should be considered usable for decision making purposes.

UJ - Indicates the constituent was analyzed for and not detected. Due to a minor quality control deficiency identified during data validation the concentration reported may not accurately reflect the sample quantitation limit. The associated data should be considered usable for decision making purposes.

J - Indicates the constituent was analyzed for and detected. This qualifier may be applied by the laboratory to indicate a concentration which is less than the contract required quantitation limit (CRQL) but greater than the instrument detection limit (IDL). During data validation this qualifier may be applied to indicate a minor quality control deficiency. However in either case, the associated data should be considered usable for decision making purposes.

NJ - Indicates presumptive evidence of a constituent at an estimated value. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

N - Indicates presumptive evidence of a constituent. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

JN - Indicates a tentatively identified compound (TIC) whose concentration and identification have been determined to be valid as a result of data validation. The associated data should be considered usable for decision making purposes.

UJN - Indicates a tentatively identified compound (TIC) that has been determined to be presumptive and valid (JN) in terms of identification and quantitation and has been qualified as undetected (U) due to associated blank contamination.

UR - Indicates the constituent was analyzed for and not detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

R - Indicates the constituent was analyzed for and detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

SAMPLES/MATRIX BOC950 through BOC960 / Sediments
BOCBN9, BOCBN0 / Sediments

1. DATA PACKAGE COMPLETENESS AND CASE NARRATIVE

Is technical verification documentation present? . . . . . (Yes) No N/A

Is a case narrative present? . . . . . (Yes) No N/A

Comments:

2. HOLDING TIMES

Are sample holding times acceptable? . . . . . Yes (No) N/A

Comments:

	Collected	Analyzed	DAYS
All Samples(*)	7-12-94	7-26 and 7-28	14 and 16
* BOCBN0	7-11-94	7-25-94	14
BOC950	7-12-94	7-28-94	16
BOC951			16
BOC954			16
BOC957			16
BOC958			16

(*) - Results qualified as J/UJ. See form B-7. 9-29

GC/MS ORGANIC DATA VALIDATION CHECKLIST

3. INSTRUMENT TUNING AND CALIBRATION

Is the GC/MS tuning/performance check acceptable? . . . . . Yes No N/A

Are initial calibrations acceptable? . . . . . Yes No N/A

Are continuing calibrations acceptable? . . . . . Yes No N/A

Comments:

4. BLANKS

Were laboratory blanks analyzed? . . . . . Yes No N/A

Are laboratory blank results acceptable? . . Note ① . . . . . Yes No N/A

Were field/trip blanks analyzed? . . . . . Note ② . . . . . Yes No ~~N/A~~ 9-27

Are field/trip blank results acceptable? . . Note ② . . . . . Yes No ~~N/A~~

Comments: ① See attached Method Blank Summaries.
9-27-91 ~~② Field QC was not identified in this SDG but it has been requested. Results will be evaluated in the final Validation Summary.~~ ② Equipment Blank BCCBM9 and trip blank BCCBN0 are non-detect for all components except 2ug/Kgm Trichloroethene in BCCBM9. (★ See Below)

5. ACCURACY

Were surrogates/System Monitoring Compounds analyzed? . . . . . Yes No N/A

Are surrogate/System Monitoring Compound recoveries acceptable? Yes No N/A

Were MS/MSD samples analyzed? . . . . . Yes No N/A

Are MS/MSD results acceptable? . . . . . Yes No N/A

Comments:

★ No qualification is required based upon field QC results.

070

GC/MS ORGANIC DATA VALIDATION CHECKLIST

6. PRECISION

Are MS/MSD RPD values acceptable? . . . . . Yes No N/A

Are field duplicate RPD values acceptable? . Note ① . . . . Yes No ~~N/A~~ 9-27

Are field split RPD values acceptable? . . . . . Yes No N/A

Comments: ~~① Field Duplicate precision can not be generated since Field QC Samples were not identified in this SDG. However, identification has been requested and Field QC will be evaluated in the final validation summary.~~ 9-27

① Field duplicate BQC953 of Sample BQC952 is within acceptable RPD limits. No qualifications applied.

7. SYSTEM PERFORMANCE

Were internal standards analyzed? . . . . . Yes No N/A

Are internal standard areas acceptable? . . . . . Yes No N/A

Are internal standard retention times acceptable? . . . . . Yes No N/A

Comments:

8. COMPOUND IDENTIFICATION AND QUANTITATION

Is compound identification acceptable? . . . . . Yes No N/A

Is compound quantitation acceptable? . . . . . Yes No N/A

Comments:

9. REPORTED RESULTS AND QUANTITATION LIMITS

Are results reported for all requested analyses? . . . . . Yes No N/A

Are all results supported in the raw data? . . . . . Yes No N/A

Do results meet the CRQLs? . . . . . Yes No N/A

Has the laboratory properly identified and coded all TIC? . . . Yes No N/A

Comments:

MEMORANDUM

TO: 200 West Ash Pit Project QA Record — September 30, 1994

FR: Thomas Stapp, Golder Associates Inc.

RE: SEMIVOLATILE DATA VALIDATION SUMMARY FOR DATA PACKAGE W0130-QES-143 (943-1610.004 143SEMI.004)

INTRODUCTION

This memo presents the results of data validation on data package W0130-QES-143 prepared by International Technology laboratory. A list of samples validated along with the analyses reported and the methods of analysis is provided in the following table.

SAMPLE ID	SAMPLE DATE	MEDIA	ANALYSES
B0C950	7/12/94	SEDIMENT	SEE NOTE 1
B0C951	7/12/94	SEDIMENT	
B0C952	7/12/94	SEDIMENT	
B0C953	7/12/94	SEDIMENT	
B0C954	7/12/94	SEDIMENT	
B0C955	7/12/94	SEDIMENT	
B0C956	7/12/94	SEDIMENT	
B0C957	7/12/94	SEDIMENT	
B0C958	7/12/94	SEDIMENT	
B0C959	7/12/94	SEDIMENT	
B0C960	7/12/94	SEDIMENT	
B0CBM9	7/12/94	SEDIMENT	

Notes:

1. Indicates the samples were analyzed for Appendix IX semivolatile organics.

OCT 1994
RECEIVED
TQO

Data validation was conducted in accordance with the WHC statement of work (WHC 1994) and validation procedures (WHC 1993). Attachments 1 through 5 provide the following information as indicated below:

Attachment 1. Glossary of Data Reporting Qualifiers
Attachment 2. Summary of Data Qualifications
Attachment 3. Qualified Data Summary and Annotated Laboratory Reports
Attachment 4. Laboratory Narrative and Chain-of-Custody Documentation
Attachment 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

This section presents a summary of the data quality in terms of the referenced validation criteria.

Precision. Goals for precision were met.

Accuracy. Goals for accuracy were met.

Sample Result Verification. All sample results were supported in the raw data. One sample was analyzed at dilution and has been reported.

Detection Limits. Detection limit goals were met.

Completeness. The data package was complete for all requested analyses. A total of twelve (12) samples were validated in this data package with a total of 1,380 determinations reported, all of which were deemed valid. This results in a completeness of 100 percent which meets normal work plan objectives of 90 percent.

MAJOR DEFICIENCIES

No major deficiencies were identified during data validation which required qualification of data as unusable.

MINOR DEFICIENCIES

The following minor deficiencies were identified during data validation which required qualification of data.

Laboratory Matrix Spikes

- The matrix spike duplicate recovery of 2,4-dinitrotoluene was unacceptable. Attachments 2 and 5 provide a summary of samples affected, qualification applied and supporting documentation.

TENTATIVELY IDENTIFIED COMPOUNDS

Tentatively identified compounds (TICs) reported by the laboratory were evaluated during validation and qualified as follows:

- TICs were detected in the samples and determined to be valid, resulting in qualification of the results as presumptive and valid (JN).

- TICs were detected in the sample and associated laboratory blank and have been qualified due to associated blank contamination and determined to be presumptive and valid (UJN). Attachments 3 and 5 provide a summary of the sample affected, data qualification applied and supporting documentation.

- TICs reported by the laboratory as unknowns have been corrected to 2-methoxy-2-propoxy propane following review of the spectra and qualified as estimated and presumptive (JN).

- TICs were detected in the samples and identified as common laboratory contaminants, resulting in qualification of the results as unusable (R) as shown in Attachment 3.

Field QC

Field Blank

- Sample B0CBM9 was identified as an equipment blank

Field Duplicate

- Sample B0C953 was identified as the field duplicate of sample B0C952.

ATTACHMENT 1

GLOSSARY OF DATA REPORTING QUALIFIERS

GLOSSARY OF ORGANIC DATA REPORTING QUALIFIERS

B - Indicates the constituent was analyzed for and detected in the associated laboratory blank. This qualifier is applied by the laboratory. During the process of data validation this qualifier may be replaced by other appropriate qualifiers as defined by the validation procedures. The associated data should be considered usable for decision making purposes.

U - Indicates the constituent was analyzed for and not detected. The concentration reported is the sample quantitation limit corrected for aliquot size, dilution and percent solids (in the case of solid matrices) by the laboratory. The associated data should be considered usable for decision making purposes.

UJ - Indicates the constituent was analyzed for and not detected. Due to a minor quality control deficiency identified during data validation the concentration reported may not accurately reflect the sample quantitation limit. The associated data should be considered usable for decision making purposes.

J - Indicates the constituent was analyzed for and detected. This qualifier may be applied by the laboratory to indicate a concentration which is less than the contract required quantitation limit (CRQL) but greater than the instrument detection limit (IDL). During data validation this qualifier may be applied to indicate a minor quality control deficiency. However in either case, the associated data should be considered usable for decision making purposes.

NJ - Indicates presumptive evidence of a constituent at an estimated value. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

N - Indicates presumptive evidence of a constituent. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

JN - Indicates a tentatively identified compound (TIC) whose concentration and identification have been determined to be valid as a result of data validation. The associated data should be considered usable for decision making purposes.

UJN - Indicates a tentatively identified compound (TIC) that has been determined to be presumptive and valid (JN) in terms of identification and quantitation and has been qualified as undetected (U) due to associated blank contamination.

UR - Indicates the constituent was analyzed for and not detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

R - Indicates the constituent was analyzed for and detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

CERTIFICATE OF ANALYSIS

IT Corporation
2800 George Washington Way
Richland, WA 99352
Attn: Van Pettey

August 22, 1994

Job Number: 854

This is the Certificate of Analysis for the following samples:

SDG:	W0130
Client Project ID:	WHC SAF 94-329 200 West Ash Pit Demolition Site Closure Plan
Received by Knoxville:	July 19, 1994
Number of Samples:	Thirteen (13)
Sample Type:	Soil

I. Introduction

On July 15, 1994, thirteen (13) soil samples arrived at ITAS-Richland, Washington and were transferred to ITAS-Knoxville for chemical analysis. The list of analytical tests performed, as well as date of receipt and analysis, can be found in the attached report.

II. Analytical Results/Methodology

The analytical results for this report are presented by analytical test. Each set of data will include sample identification information and the analytical results.

The samples were analyzed for Appendix IX volatile and semivolatile organic compounds by gas chromatography/mass spectroscopy (GS/MS) based on EPA SW-846 methods 8240 and 8270.

Reviewed and Approved:

Sheree A. Schneider

Sheree' A. Schneider
Project Manager

II. Analytical Results/Methodology (Continued)

The samples were analyzed for Target Analyte List (TAL) metals by cold vapor atomic absorption spectroscopy (CVAA), graphite furnace atomic absorption spectroscopy (GFAA), and inductively coupled plasma spectroscopy (ICP) in accordance with the EPA CLP ILM03.0 Statement of Work.

The samples were analyzed for nitrate-nitrite based on EPA method 353.2.

The samples were analyzed for anions by ion chromatography using EPA method 300.0.

The samples were analyzed for nitroexplosives by high performance liquid chromatography (HPLC) based on draft EPA method 8330.

III. Quality Control

The volatiles analyses were performed by purge and trap with a J & W DB-624 capillary column on a Finnigan INCOS 500 GC/MS/DS. A matrix spike and matrix spike duplicate were analyzed using sample BOC950. All QC results met method specified limits.

The semivolatiles analyses were performed by direct injection of sample extract on a Restek XTI-5 capillary column on a Finnigan 4500 XL GC/MS/DS. Sample BOC954 was initially analyzed at a five-fold dilution due to the appearance of the extract. BOC954 required an additional fifty-fold dilution due to target compound concentrations that were greater than the calibration range in the five-fold dilution run. Four surrogate standards were diluted out in the fifty-fold dilution run. Daily calibrations were performed for the usual 8270 targets and for the additional Appendix IX compounds, with the excetpion of the fifty-fold dilution of BOC954. No Appendix IX calibration was performed on the fifty-fold dilution of BOC954 due to no Appendix IX compounds being identified in the five-fold dilution. The samples did not contain any Appendix IX compounds. A matrix spike and matrix spike duplicate were analyzed using sample BOC950. The matrix spike and matrix spike duplicate passed all QC criteria with the exception of 2,4-dinitrotoluene in the matrix spike duplicate, which was one percentage point above the criteria. However, the laboratory control sample did meet all QC criteria.

Data were reported with qualifiers as follows:

U - Compound analyzed for but not detected; value given is quantitation limit.
E - Compound exceeded calibration range.
D - Compound analyzed at a secondary dilution factor.
J - Compound detected but below quantitation limit; value estimated.
S - Spiked compound.

Client Project ID: WHC SAF 94-329 200 West Ash Pit Demolition Site Closure Plan

IT ANALYTICAL SERVICES
5815 MIDDLEBROOK PIKE
KNOXVILLE, TN

III. Quality Control (Continued)

B - Compound found in method blank.
A - Suspected aldol condensation product.
Y - Indistinguishable isomer in tentatively identified compounds.
N - Presumptive evidence of compound presence.

The samples were digested on July 22, 1994 for ICP and July 22 and August 2, 1994 for GFAA. The CVAA analysis for mercury was performed on July 25, 1994; the GFAA analyses for arsenic, lead, selenium and thallium were performed July 22 thru August 5, 1994; the remaining metals were analyzed by ICP on July 25, 1994. All run QC was acceptable. A duplicate/spike pair was prepared using sample number BOC950. Spike recovery (accuracy) results were within acceptance limits for all parameters except for antimony, arsenic, copper, manganese and zinc. Poor spike recovery for these analytes appears to be attributable to sample nonhomogeneity and matrix interference. Duplicate RPD (precision) results were within acceptance limits for all parameters except for chromium, zinc and titanium, which exhibited slight variations due to sample nonhomogeneity.

Data were reported with qualifiers as follows:

"C" Qualifiers

U - Compound was analyzed for but not detected. The number is the detection limit for the sample.
B - Value greater than instrument detection limit, but less than contract required quantitation limit.

"Q" Qualifiers

* - Duplicate analysis outside control limits.
N - Spiked sample recovery outside control limits.
W - Post-digestion spike for GFAA was out of control limits (85-115%), while sample absorbance was less than 50% of spike absorbance.
S - The reported value was determined by method of standard additions.

"M" Qualifiers

P - Analysis performed by ICP.
V - Analysis performed by CVAA.
F - Analysis performed by GFAA.
C - Cyanide analysis by manual distillation/colorimetric determination.

IT ANALYTICAL SERVICES
5815 MIDDLEBROOK PIKE
KNOXVILLE, TN

III. Quality Control (Continued)

Miscellaneous

D - Duplicate.
S - Spike.
NR - Not required.
G - Native analyte > 4 times spike added, therefore, acceptance criteria do not apply.
X - Detection limits higher than normal due to sample matrix interferences.

The samples were analyzed for nitrate/nitrite on July 26, 1994. A matrix spike and matrix spike duplicate were analyzed using sample BOC950. All QC results were acceptable.

The samples were analyzed for fluoride, chloride, phosphate, nitrate, nitrite and sulfate by EPA method 300.0 on August 1 and 2, 1994. A matrix spike and matrix spike duplicate were analyzed using sample BOC950. All QC results were acceptable.

The samples were analyzed for nitroexplosives on August 12, 1994. A matrix spike and matrix spike duplicate were analyzed using sample BOC950. All QC results were acceptable.

Attn: Van Pettey

August 22, 1994

Job Number: 854

This is the Certificate of Analysis for the following samples:

SDG:	W0130
Client Project ID:	WHC SAF 94-329 200 West Ash Pit Demolition Site Closure Plan
Received by Knoxville:	July 19, 1994
Number of Samples:	Thirteen (13)
Sample Type:	Soil

I. Introduction

On July 15, 1994, thirteen (13) soil samples arrived at ITAS-Richland, Washington and were transferred to ITAS-Knoxville for chemical analysis. The list of analytical tests performed, as well as date of receipt and analysis, can be found in the attached report.

II. Analytical Results/Methodology

The analytical results for this report are presented by analytical test. Each set of data will include sample identification information and the analytical results.

The samples were analyzed for Appendix IX volatile and semivolatile organic compounds by gas chromatography/mass spectroscopy (GS/MS) based on EPA SW-846 methods 8240 and 8270.

Reviewed and Approved:

Sheree A. Schneider

IT ANALYTICAL SERVICES
5815 MIDDLEBROOK PIKE
KNOXVILLE, TN

II. Analytical Results/Methodology (Continued)

The samples were analyzed for Target Analyte List (TAL) metals by cold vapor atomic absorption spectroscopy (CVAA), graphite furnace atomic absorption spectroscopy (GFAA), and inductively coupled plasma spectroscopy (ICP) in accordance with the EPA CLP ILM03.0 Statement of Work.

The samples were analyzed for nitrate-nitrite based on EPA method 353.2.

The samples were analyzed for anions by ion chromatography using EPA method 300.0.

The samples were analyzed for nitroexplosives by high performance liquid chromatography (HPLC) based on draft EPA method 8330.

III. Quality Control

The volatiles analyses were performed by purge and trap with a J & W DB-624 capillary column on a Finnigan INCOS 500 GC/MS/DS. A matrix spike and matrix spike duplicate were analyzed using sample BOC950. All QC results met method specified limits.

The semivolatiles analyses were performed by direct injection of sample extract on a Restek XTI-5 capillary column on a Finnigan 4500 XL GC/MS/DS. Sample BOC954 was initially analyzed at a five-fold dilution due to the appearance of the extract. BOC954 required an additional fifty-fold dilution due to target compound concentrations that were greater than the calibration range in the five-fold dilution run. Four surrogate standards were diluted out in the fifty-fold dilution run. Daily calibrations were performed for the usual 8270 targets and for the additional Appendix IX compounds, with the excetpion of the fifty-fold dilution of BOC954. No Appendix IX calibration was performed on the fifty-fold dilution of BOC954 due to no Appendix IX compounds being identified in the five-fold dilution. The samples did not contain any Appendix IX compounds. A matrix spike and matrix spike duplicate were analyzed using sample BOC950. The matrix spike and matrix spike duplicate passed all QC criteria with the exception of 2,4-dinitrotoluene in the matrix spike duplicate, which was one percentage point above the criteria. However, the laboratory control sample did meet all QC criteria.

Data were reported with qualifiers as follows:

U - Compound analyzed for but not detected; value given is quantitation limit.
E - Compound exceeded calibration range.
D - Compound analyzed at a secondary dilution factor.
J - Compound detected but below quantitation limit; value estimated.
S - Spiked compound.

III. Quality Control (Continued)

B - Compound found in method blank.
A - Suspected aldol condensation product.
Y - Indistinguishable isomer in tentatively identified compounds.
N - Presumptive evidence of compound presence.

The samples were digested on July 22, 1994 for ICP and July 22 and August 2, 1994 for GFAA. The CVAA analysis for mercury was performed on July 25, 1994; the GFAA analyses for arsenic, lead, selenium and thallium were performed July 22 thru August 5, 1994; the remaining metals were analyzed by ICP on July 25, 1994. All run QC was acceptable. A duplicate/spike pair was prepared using sample number BOC950. Spike recovery (accuracy) results were within acceptance limits for all parameters except for antimony, arsenic, copper, manganese and zinc. Poor spike recovery for these analytes appears to be attributable to sample nonhomogeneity and matrix interference. Duplicate RPD (precision) results were within acceptance limits for all parameters except for chromium, zinc and titanium, which exhibited slight variations due to sample nonhomogeneity.

Data were reported with qualifiers as follows:

"C" Qualifiers

U - Compound was analyzed for but not detected. The number is the detection limit for the sample.
B - Value greater than instrument detection limit, but less than contract required quantitation limit.

"O" Qualifiers

* - Duplicate analysis outside control limits.
N - Spiked sample recovery outside control limits.
W - Post-digestion spike for GFAA was out of control limits (85-115%), while sample absorbance was less than 50% of spike absorbance.
S - The reported value was determined by method of standard additions.

"M" Qualifiers

P - Analysis performed by ICP.
V - Analysis performed by CVAA.
F - Analysis performed by GFAA.
C - Cyanide analysis by manual distillation/colorimetric determination.

III. Quality Control (Continued)

Miscellaneous

D - Duplicate.
S - Spike.
NR - Not required.
G - Native analyte > 4 times spike added, therefore, acceptance criteria do not apply.
X - Detection limits higher than normal due to sample matrix interferences.

The samples were analyzed for nitrate/nitrite on July 26, 1994. A matrix spike and matrix spike duplicate were analyzed using sample BOC950. All QC results were acceptable.

The samples were analyzed for fluoride, chloride, phosphate, nitrate, nitrite and sulfate by EPA method 300.0 on August 1 and 2, 1994. A matrix spike and matrix spike duplicate were analyzed using sample BOC950. All QC results were acceptable.

The samples were analyzed for nitroexplosives on August 12, 1994. A matrix spike and matrix spike duplicate were analyzed using sample BOC950. All QC results were acceptable.

Are initial calibrations acceptable? . Note ①+② . . . . (Yes) No N/A

Are continuing calibrations acceptable? . . . . . (Yes) No N/A

Comments: ① Minimum of 5 levels for initial Calib. not provided for 2,4,5-Trichlorophenol, Benzoic Acid, 2-Nitroaniline, 3-Nitroaniline, 2,4-DiNitrophenol, 4Nitrophenol, 4-Nitroaniline, 4,6-DiNitro-2methylphenol and Pentachlorophenol. ② Initial Calib. not provided for Appendix IX cmpnds however RRF and ICAL Dates are given.

4. BLANKS

Were laboratory blanks analyzed? . . . . . (Yes) No N/A

Are laboratory blank results acceptable? Note ① . . . . . (Yes) No N/A

Were field/trip blanks analyzed? . . . . Note ② . . . . . (Yes) No N/A

Are field/trip blank results acceptable? . . . . . (Yes) No N/A

Comments: ① See method blank summary page attached. ② Equipment Blank BOCBM9 is non-detect for all components except some TIC cmpnds.

5. ACCURACY

Were surrogates/System Monitoring Compounds analyzed? . . . . . (Yes) No N/A

Are surrogate/System Monitoring Compound recoveries acceptable? (Yes) No N/A

Were MS/MSD samples analyzed? . . . . . (Yes) No N/A

Are MS/MSD results acceptable? . . . . Note ① . . . . . Yes (No) N/A

Comments: ① MSD recovery of 2,4-Dinitrotoluene outside of lab control limits of 89% (89.9) ~~however default control limits of 50-150% are satisfied and no~~ qualification will be applied to associated Sample results. (J/UJ)

GC/MS ORGANIC DATA VALIDATION CHECKLIST

6. PRECISION

Are MS/MSD RPD values acceptable? . . . . . Yes No N/A

Are field duplicate RPD values acceptable? Note ①. . . . . Yes No ~~N/A~~ 9-27

Are field split RPD values acceptable? . . ~~Note ①~~ 9-27. . Yes No N/A

Comments: ~~① Field duplicate/split samples were not identified in this SDG but have been requested and will be evaluated in the final data summary~~ ① Field duplicate BOC953 of sample BOC952 is within acceptable RPD limits.

9-27-94

7. SYSTEM PERFORMANCE

Were internal standards analyzed? . . . . . Yes No N/A

Are internal standard areas acceptable? . . . . . Yes No N/A

Are internal standard retention times acceptable? . . . . . Yes No N/A

Comments:

8. COMPOUND IDENTIFICATION AND QUANTITATION

Is compound identification acceptable? . . . . . Yes No N/A

Is compound quantitation acceptable? . . . . . Yes No N/A

Comments:

9. REPORTED RESULTS AND QUANTITATION LIMITS

Are results reported for all requested analyses? . . . . . Yes No N/A

Are all results supported in the raw data? . . . . . Yes No N/A

Do results meet the CRQLs? . . . . . Yes No N/A

Has the laboratory properly identified and coded all TIC? . . . Yes No N/A

Comments:
