Mr. Douglas R. Sherwood
Hanford Project Manager
U.S. Environmental Protection Agency
712 Swift Boulevard, Suite 5
Richland, Washington 99352

Dear Messrs. Nylander and Sherwood:

SUBMITTAL OF 200-UP-2 VALIDATED DATA PACKAGES

Attatched are validated data packages from the 200-UP-2 Limited Field Investigation (LFI). The validated data packages represent data from the 200-UP-2 vadose zone boreholes. This transmittal does not represent all of the data packages from the 200-UP-2 LFI. Submittal of these validated data packages partially fulfills pending Hanford Federal Facility Agreement and Consent Order Interim Milestone of M-15-15A. As other data packages become available, they will be transmitted under separate cover.

If you have any questions, please contact Mr. Paul M. Pak at 376-4798.

Sincerely,

Patrick W. Willison
Acting Hanford Project Manager

GENERAL GC DATA VALIDATION SUMMARY FOR DATA PACKAGE:
B09325-TMA-620 (923-E418,Filename B09325.GC)

9413225.0004

MEMORANDUM

MAR 1994 RECEIVED TQO

TO: 200-UP-2 Project QA Record

March 1, 1994

FR: Susan Winter, Golder Associates Inc.

RE: GENERAL GC DATA VALIDATION SUMMARY FOR DATA PACKAGE: B09325-TMA-620 (923-E418, Filename B09325.GC)

INTRODUCTION

This memo presents the results of data validation on data package B09325-TMA-620 prepared by the Thermo Analytical (TMA) laboratory. A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

SAMPLE ID	SAMPLE DATE	MEDIA	ANALYSIS
B09325	09/07/93	SOIL	SEE NOTE 1
B09326	09/07/93	SOIL	
B09327	09/08/93	SOIL	
B09328	09/08/93	SOIL	
B09329	09/08/93	SOIL	
B09330	09/08/93	SOIL	

Note 1. All samples were analyzed for kerosene according to the 8015 Modified method.

MAR 7 1994

Data validation was conducted in accordance with the WHC statement of work (WHC 1993a) and validation procedures (WHC 1993b). Attachments 1 through 5 provide the following information as indicated below:

Attachment 1. Glossary of Data Reporting Qualifiers
Attachment 2. Summary of Data Qualifications
Attachment 3. Qualified Data Summary and Annotated Laboratory Reports
Attachment 4. Laboratory Narrative and Chain-of-Custody Documentation
Attachment 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

Precision. Goals for precision were met.

Accuracy. Goals for accuracy were met.

Sample Result Verification. All sample results were supported in the raw data.

Detection Limits. Detection limit goals were met for all sample results as specified in the reference analytical method.

Completeness. The data package was complete for all requested analyses. A total of six samples were validated in this data package with a total of 6 determinations reported, all of

·001

which were deemed valid. This results in a completeness of 100 percent, which meets normal work plan objectives of 90%.

MAJOR DEFICIENCIES

No major deficiencies were identified during data validation which required qualification of data as unusable.

MINOR DEFICIENCIES

No minor deficiencies were identified during data validation which required qualification of data.

GLOSSARY OF DATA REPORTING QUALIFIERS

9413225.0007

GLOSSARY OF ORGANIC DATA REPORTING QUALIFIERS

B - Indicates the constituent was analyzed for and detected in the associated laboratory blank. This qualifier is applied by the laboratory. During the process of data validation this qualifier may be replaced by other appropriate qualifiers as defined by the validation procedures. The associated data should be considered usable for decision making purposes.

U - Indicates the constituent was analyzed for and not detected. The concentration reported is the sample quantitation limit corrected for aliquot size, dilution and percent solids (in the case of solid matrices) by the laboratory. The associated data should be considered usable for decision making purposes.

UJ - Indicates the constituent was analyzed for and not detected. Due to a minor quality control deficiency identified during data validation the concentration reported may not accurately reflect the sample quantitation limit. The associated data should be considered usable for decision making purposes.

J - Indicates the constituent was analyzed for and detected. This qualifier may be applied by the laboratory to indicate a concentration which is less than the contract required quantitation limit (CRQL) but greater than the instrument detection limit (IDL). During data validation this qualifier may be applied to indicate a minor quality control deficiency. However in either case, the associated data should be considered usable for decision making purposes.

NJ - Indicates presumptive evidence of a constituent at an estimated value. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

N - Indicates presumptive evidence of a constituent. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

JN - Indicates a tentatively identified compound (TIC) whose concentration and identification have been determined to be valid as a result of data validation. The associated data should be considered usable for decision making purposes.

UR - Indicates the constituent was analyzed for and not detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

R - Indicates the constituent was analyzed for and detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

LABORATORY NARRATIVE AND CHAIN-OF-CUSTODY DOCUMENTATION

GW3225.0019

CASE NARRATIVE

LABORATORY : TMA/ARLI

CASE : 09-021

CONTRACT ID : WESTINGHOUSE HANFORD COMPANY

SDG RECEIPT DATE : September 10, 1993

1.0 DESCRIPTION OF CASE :

Seven soil samples were analyzed for TCL Organics- Volatiles and Semivolatiles according to the USEPA Contract Laboratory Program (CLP) Statement of Work for Organic Analysis, Revision OLM01.8. The Extractable Hydrocarbons for Kerosene (K) were analyzed according to the SW-846 Method 8015M.

9413225.0020

3.0 COMMENTS :

3.1 SHIPPING AND DOCUMENTATION :

All of the samples were received intact and properly documented.

3.2 ANALYSIS

3.2.1 VOLATILE ANALYSIS COMMENTS :

LOW LEVEL SOIL :

The samples were analyzed by heated purge within the CLP SOW holding times.

All of the QC results were within the limits specified by the EPA CLP SOW.

TUNES :

All BFB tunes were injected directly into the GC/MS instrument.

3.2.2 SEMIVOLATILE ANALYSIS COMMENTS :

LOW LEVEL SOIL :

The samples were extracted and analyzed within the CLP SOW holding times.

Sample B09327 had a Terphenyl-d14 surrogate recovery slightly above the QC limits. Sample B09326MSD had matrix spike recoveries for Phenol and 2,4-Dinitrotoluene that were slightly above the QC limits. In accordance with CLP protocol, no further action was required.

Pyrene was detected in sample B09327 at a concentration below the CRQL.

All of the other QC results were within the limits specified by the EPA CLP SOW.

3.2.3 EXTRACTABLE HYDROCARBONS "KEROSENE RANGE" COMMENTS :

SEQUENCE NOTES :

The sequence was started on 09/16/93 and was analyzed according to the SW-846 Method 8015M. The initial calibration consisted of 5 different levels of the Kerosene standard that ranged from 200ppm to 2000ppm. The continuing calibration at the 1000ppm level was injected amongst a series of samples, in order to verify the instrument stability. The %RSD in the initial calibration and the %D in the continuing calibration were below their 20% and 15% limits, respectively.

9413225.0021

SAMPLE NOTES :

LOW LEVEL SOIL :

The samples were extracted and analyzed for extractable hydrocarbons in the Kerosene range within the required holding times. Approximately 20 g of each sample was extracted and concentrated to 5 mL.

There were no hydrocarbons in the Kerosene range detected in any of the samples. Sample B09330 was spiked with Kerosene and the matrix spike recoveries were between 81% and 84%. A blank spike was prepared at the same time, and had an 86% recovery.

All of the QC results were within the limits specified by the SW-846 Method 8015M.

9413225.0022

We certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data in this hardcopy data package and in the computer-readable data submitted on diskette is authorized by the Laboratory Manager or his designee, as verified by the following signatures.

RE: GENERAL GC DATA VALIDATION SUMMARY FOR DATA PACKAGE: B09325-TMA-620 (923-E418, Filename B09325.GC)

INTRODUCTION

This memo presents the results of data validation on data package B09325-TMA-620 prepared by the Thermo Analytical (TMA) laboratory. A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

SAMPLE ID	SAMPLE DATE	MEDIA	ANALYSIS
B09325	09/07/93	SOIL	SEE NOTE 1
B09326	09/07/93	SOIL	
B09327	09/08/93	SOIL	
B09328	09/08/93	SOIL	
B09329	09/08/93	SOIL	
B09330	09/08/93	SOIL	

Note 1. All samples were analyzed for kerosene according to the 8015 Modified method.

MAR 7 1994

Data validation was conducted in accordance with the WHC statement of work (WHC 1993a) and validation procedures (WHC 1993b). Attachments 1 through 5 provide the following information as indicated below:

Attachment 1. Glossary of Data Reporting Qualifiers
Attachment 2. Summary of Data Qualifications
Attachment 3. Qualified Data Summary and Annotated Laboratory Reports
Attachment 4. Laboratory Narrative and Chain-of-Custody Documentation
Attachment 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

Precision. Goals for precision were met.

Accuracy. Goals for accuracy were met.

Sample Result Verification. All sample results were supported in the raw data.

Detection Limits. Detection limit goals were met for all sample results as specified in the reference analytical method.

Completeness. The data package was complete for all requested analyses. A total of six samples were validated in this data package with a total of 6 determinations reported, all of

·001

which were deemed valid. This results in a completeness of 100 percent, which meets normal work plan objectives of 90%.

MAJOR DEFICIENCIES

No major deficiencies were identified during data validation which required qualification of data as unusable.

MINOR DEFICIENCIES

No minor deficiencies were identified during data validation which required qualification of data.

GLOSSARY OF DATA REPORTING QUALIFIERS

9413225.0034

GLOSSARY OF ORGANIC DATA REPORTING QUALIFIERS

B - Indicates the constituent was analyzed for and detected in the associated laboratory blank. This qualifier is applied by the laboratory. During the process of data validation this qualifier may be replaced by other appropriate qualifiers as defined by the validation procedures. The associated data should be considered usable for decision making purposes.

U - Indicates the constituent was analyzed for and not detected. The concentration reported is the sample quantitation limit corrected for aliquot size, dilution and percent solids (in the case of solid matrices) by the laboratory. The associated data should be considered usable for decision making purposes.

UJ - Indicates the constituent was analyzed for and not detected. Due to a minor quality control deficiency identified during data validation the concentration reported may not accurately reflect the sample quantitation limit. The associated data should be considered usable for decision making purposes.

J - Indicates the constituent was analyzed for and detected. This qualifier may be applied by the laboratory to indicate a concentration which is less than the contract required quantitation limit (CRQL) but greater than the instrument detection limit (IDL). During data validation this qualifier may be applied to indicate a minor quality control deficiency. However in either case, the associated data should be considered usable for decision making purposes.

NJ - Indicates presumptive evidence of a constituent at an estimated value. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

N - Indicates presumptive evidence of a constituent. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

JN - Indicates a tentatively identified compound (TIC) whose concentration and identification have been determined to be valid as a result of data validation. The associated data should be considered usable for decision making purposes.

UR - Indicates the constituent was analyzed for and not detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

R - Indicates the constituent was analyzed for and detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

SDG RECEIPT DATE : September 10, 1993

1.0 DESCRIPTION OF CASE :

Seven soil samples were analyzed for TCL Organics- Volatiles and Semivolatiles according to the USEPA Contract Laboratory Program (CLP) Statement of Work for Organic Analysis, Revision OLM01.8. The Extractable Hydrocarbons for Kerosene (K) were analyzed according to the SW-846 Method 8015M.

2.0 SAMPLE LIST :

B09331	A3-09-021-07A	V	SOIL

3.0 COMMENTS :

3.1 SHIPPING AND DOCUMENTATION :

All of the samples were received intact and properly documented.

3.2 ANALYSIS

3.2.1 VOLATILE ANALYSIS COMMENTS :

LOW LEVEL SOIL :

The samples were analyzed by heated purge within the CLP SOW holding times.

All of the QC results were within the limits specified by the EPA CLP SOW.

TUNES :

All BFB tunes were injected directly into the GC/MS instrument.

3.2.2 SEMIVOLATILE ANALYSIS COMMENTS :

LOW LEVEL SOIL :

The samples were extracted and analyzed within the CLP SOW holding times.

Sample B09327 had a Terphenyl-d14 surrogate recovery slightly above the QC limits. Sample B09326MSD had matrix spike recoveries for Phenol and 2,4-Dinitrotoluene that were slightly above the QC limits. In accordance with CLP protocol, no further action was required.

Pyrene was detected in sample B09327 at a concentration below the CRQL.

All of the other QC results were within the limits specified by the EPA CLP SOW.

3.2.3 EXTRACTABLE HYDROCARBONS "KEROSENE RANGE" COMMENTS :

SEQUENCE NOTES :

The sequence was started on 09/16/93 and was analyzed according to the SW-846 Method 8015M. The initial calibration consisted of 5 different levels of the Kerosene standard that ranged from 200ppm to 2000ppm. The continuing calibration at the 1000ppm level was injected amongst a series of samples, in order to verify the instrument stability. The %RSD in the initial calibration and the %D in the continuing calibration were below their 20% and 15% limits, respectively.

9413225.0048

SAMPLE NOTES :

LOW LEVEL SOIL :

The samples were extracted and analyzed for extractable hydrocarbons in the Kerosene range within the required holding times. Approximately 20 g of each sample was extracted and concentrated to 5 mL.

There were no hydrocarbons in the Kerosene range detected in any of the samples. Sample B09330 was spiked with Kerosene and the matrix spike recoveries were between 81% and 84%. A blank spike was prepared at the same time, and had an 86% recovery.

All of the QC results were within the limits specified by the SW-846 Method 8015M.

9413225.0049

We certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data in this hardcopy data package and in the computer-readable data submitted on diskette is authorized by the Laboratory Manager or his designee, as verified by the following signatures.

RE: GENERAL GC DATA VALIDATION SUMMARY FOR DATA PACKAGE: B09325-TMA-620 (923-E418, Filename B09325.GC)

INTRODUCTION

This memo presents the results of data validation on data package B09325-TMA-620 prepared by the Thermo Analytical (TMA) laboratory. A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

SAMPLE ID	SAMPLE DATE	MEDIA	ANALYSIS
B09325	09/07/93	SOIL	SEE NOTE 1
B09326	09/07/93	SOIL	
B09327	09/08/93	SOIL

Note 1. All samples were analyzed for kerosene according to the 8015 Modified method.			

Data validation was conducted in accordance with the WHC statement of work (WHC 1993a) and validation procedures (WHC 1993b). Attachments 1 through 5 provide the following information as indicated below:

Attachment 1. Glossary of Data Reporting Qualifiers
Attachment 2. Summary of Data Qualifications
Attachment 3. Qualified Data Summary and Annotated Laboratory Reports
Attachment 4. Laboratory Narrative and Chain-of-Custody Documentation
Attachment 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

This section presents a summary of the data quality in terms of the referenced validation criteria.

Precision. Goals for precision were met.

Accuracy. Goals for accuracy were met.

Sample Result Verification. All sample results were supported in the raw data.

Detection Limits. Detection limit goals were met for all sample results as specified in the reference analytical method.

Reused 4/20/94

001

9413225.0059

Completeness. The data package was complete for all requested analyses. A total of six samples were validated in this data package with a total of 6 determinations reported, all of which were deemed valid. This results in a completeness of 100 percent, which meets normal work plan objectives of 90%.

MAJOR DEFICIENCIES

No major deficiencies were identified during data validation which required qualification of data as unusable.

MINOR DEFICIENCIES

No minor deficiencies were identified during data validation which required qualification of data.

GLOSSARY OF DATA REPORTING QUALIFIERS

9413225.0061

GLOSSARY OF ORGANIC DATA REPORTING QUALIFIERS

B - Indicates the constituent was analyzed for and detected in the associated laboratory blank. This qualifier is applied by the laboratory. During the process of data validation this qualifier may be replaced by other appropriate qualifiers as defined by the validation procedures. The associated data should be considered usable for decision making purposes.

U - Indicates the constituent was analyzed for and not detected. The concentration reported is the sample quantitation limit corrected for aliquot size, dilution and percent solids (in the case of solid matrices) by the laboratory. The associated data should be considered usable for decision making purposes.

UJ - Indicates the constituent was analyzed for and not detected. Due to a minor quality control deficiency identified during data validation the concentration reported may not accurately reflect the sample quantitation limit. The associated data should be considered usable for decision making purposes.

J - Indicates the constituent was analyzed for and detected. This qualifier may be applied by the laboratory to indicate a concentration which is less than the contract required quantitation limit (CRQL) but greater than the instrument detection limit (IDL). During data validation this qualifier may be applied to indicate a minor quality control deficiency. However in either case, the associated data should be considered usable for decision making purposes.

NJ - Indicates presumptive evidence of a constituent at an estimated value. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

N - Indicates presumptive evidence of a constituent. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

JN - Indicates a tentatively identified compound (TIC) whose concentration and identification have been determined to be valid as a result of data validation. The associated data should be considered usable for decision making purposes.

UR - Indicates the constituent was analyzed for and not detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

R - Indicates the constituent was analyzed for and detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

LABORATORY NARRATIVE AND CHAIN-OF-CUSTODY DOCUMENTATION

9417225.0070

CASE NARRATIVE

LABORATORY : TMA/ARLI

CASE : 09-028

CONTRACT ID : WESTINGHOUSE HANFORD COMPANY

SDG RECEIPT DATE : September 14, 1993

1.0 DESCRIPTION OF CASE :

Four soil samples were analyzed for TCL Organics- Volatiles and Semivolatiles according to the USEPA Contract Laboratory Program (CLP) Statement of Work for Organic Analysis, Revision OLM01.8. The Extractable Hydrocarbons in the Kerosene Range (K) were analyzed according to the SW-846 Method 8015M.

2.0 SAMPLE LIST :

WESTINGHOUSE ID	LAB ID	ANALYSIS REQUESTED	MATRIX
B09332	A3-09-028-01A	V	SOIL
B09332 MS	A3-09-028-01B	V	SOIL
B09332 MSD	A3-09-028-01C	V	SOIL
B09332	A3-09-028-01D	SV	SOIL
B09332	A3-09-028-01G	K	SOIL
B09333	A3-09-028-02A	V	SOIL
B09333	A3-09-028-02B	SV	SOIL
B09333 MS	A3-09-028-02C	SV	SOIL

B09335	A3-09-028-04A	V	SOIL

3.0 COMMENTS :

3.1 SHIPPING AND DOCUMENTATION :

All of the samples were received intact and properly documented.

3.2 ANALYSIS

3.2.1 VOLATILE ANALYSIS COMMENTS :

LOW LEVEL SOIL :

The samples were analyzed by heated purge within the CLP SOW holding times.

All of the QC results were within the limits specified by the EPA CLP SOW.

TUNES :

All BFB tunes were injected directly into the GC/MS instrument.

3.2.2 SEMIVOLATILE ANALYSIS COMMENTS :

LOW LEVEL SOIL :

The samples were extracted and analyzed within the CLP SOW holding times. Phenol was detected in sample B09336 at a concentration that was below the CRQL.

The matrix spike recovery of 2,4-Dinitrotoluene in sample B09333MS was slightly above the QC limits. In accordance with the protocol, no further action was required.

All of the other QC results were within the limits specified by the EPA CLP SOW.

3.2.3 EXTRACTABLE HYDROCARBONS "KEROSENE RANGE" COMMENTS :

SEQUENCE NOTES :

The sequence was started on 09/16/93 and was analyzed according to the SW-846 Method 8015M. The initial calibration consisted of 5 different levels of the Kerosene standard that ranged from 200ppm to 2000ppm. The continuing calibration at the 1000ppm level was injected amongst a series of samples, in order to verify the instrument stability. The %RSD in the initial calibration and the %D in the continuing calibration were below their 20% and 15% limits, respectively.

SAMPLE NOTES :

LOW LEVEL SOIL :

The samples were extracted and analyzed for extractable hydrocarbons in the Kerosene range within the required holding times. Approximately 20 g of each sample was extracted and concentrated to 5 mL.

There were no hydrocarbons detected in any of the samples. Sample B09336 was spiked with Kerosene and the matrix spike recoveries were 85% and 93%. A blank spike was prepared at the same time, and had an 79% recovery.

All of the QC results were within the limits specified by the SW-846 Method 8015M.

We certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data in this hardcopy data package and in the computer-readable data submitted on diskette is authorized by the Laboratory Manager or his designee, as verified by the following signatures.

RE: GENERAL CHEMISTRY DATA VALIDATION SUMMARY FOR DATA PACKAGE: B09325-TMA-620 (923-E418, Filename B09325.GCH)

INTRODUCTION

This memo presents the results of data validation on data package B09325-TMA-611 prepared by the Thermo Analytical (TMA) laboratory. A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

SAMPLE ID	SAMPLE DATE	MEDIA	ANALYSIS
B09325	09/07/93	SOIL	SEE NOTE 1
B09326	09/07/93	SOIL	
B09327	09/08/93	SOIL	
B09328	09/08/93	SOIL	
B09329	09/08/93	SOIL	
B09330	09/08/93	SOIL	

Note 1. All samples were analyzed for chloride, fluoride, and sulfate using Method 300.0 (ion chromatography) and nitrate+nitrite-N using Method 353.2 modified.

MAR 7 1994 SCLA

Data validation was conducted in accordance with the WHC statement of work (WHC 1993a) and validation procedures (WHC 1993b). Attachments 1 through 5 provide the following information as indicated below:

Attachment 1. Glossary of Data Reporting Qualifiers
Attachment 2. Summary of Data Qualifications
Attachment 3. Qualified Data Summary and Annotated Laboratory Reports
Attachment 4. Laboratory Narrative and Chain-of-Custody Documentation
Attachment 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

Precision. Goals for precision were met.

Accuracy. Goals for accuracy were met.

Sample Result Verification. All sample results were supported in the raw data.

Detection Limits. Detection limit goals were met for all sample results as specified in the reference analytical method.

Completeness. The data package was complete for all requested analyses. A total of six samples were validated in this data package with a total of 24 determinations reported, all of

001

which were deemed valid. This results in a completeness of 100 percent, which meets normal work plan objectives of 90%.

MAJOR DEFICIENCIES

No major deficiencies were identified during data validation which required qualification of data as unusable.

MINOR DEFICIENCIES

No minor deficiencies were identified during data validation which required qualification of data.

GLOSSARY OF DATA REPORTING QUALIFIERS

9413225.0084

GLOSSARY OF INORGANIC DATA REPORTING QUALIFIERS

B - Indicates the constituent was analyzed for and detected. The concentration reported is less than the contract required detection limit (CRDL) but greater than the instrument detection limit (IDL). The associated data should be considered usable for decision making purposes.

U - Indicates the constituent was analyzed for and not detected. The concentration reported is the sample detection limit corrected for aliquot size, dilution and percent solids (in the case of solid matrices) by the laboratory. The associated data should be considered usable for decision making purposes.

UJ - Indicates the constituent was analyzed for and not detected. Due to a minor quality control deficiency identified during data validation the concentration may not accurately reflect the sample detection limit. The associated data have been qualified as estimated but should be considered usable for decision making purposes.

BJ - Indicates the constituent was analyzed for and detected at a concentration less than the contract required detection limit (CRDL) but greater than the instrument detection limit (IDL). Due to a minor quality control deficiency identified during data validation the associated data have been qualified as estimated, but should be considered usable for decision making purposes.

J - Indicates the constituent was analyzed for and detected. Due to a minor quality control deficiency identified during data validation the associated data have been qualified as estimated, but should be considered usable for decision making purposes.

UR - Indicates the constituent was analyzed for and not detected. Due to a major quality control deficiency identified during data validation, the associated data have been qualified as unusable for decision making purposes.

R - Indicates the constituent was analyzed for and detected. Due to a major quality control deficiency identified during data validation, the associated data have been qualified as unusable for decision making purposes.

CASE NARRATIVE

The holding time for the pH analysis was exceeded. Careful review of the QC analysis indicates that the data is reliable.

No problems were encountered during sample analysis. All QC results were acceptable.

RE: GENERAL CHEMISTRY DATA VALIDATION SUMMARY FOR DATA PACKAGE: B09325-TMA-620 (923-E418, Filename B09325.GCH)

INTRODUCTION

This memo presents the results of data validation on data package B09325-TMA-611 prepared by the Thermo Analytical (TMA) laboratory. A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

SAMPLE ID	SAMPLE DATE	MEDIA	ANALYSIS
B09325	09/07/93	SOIL	SEE NOTE 1
B09326	09/07/93	SOIL	
B09327	09/08/93	SOIL	
B09328	09/08/93	SOIL	
B09329	09/08/93	SOIL	
B09330	09/08/93	SOIL	

Note 1. All samples were analyzed for chloride, fluoride, and sulfate using Method 300.0 (ion chromatography) and nitrate+nitrite-N using Method 353.2 modified.

Data validation was conducted in accordance with the WHC statement of work (WHC 1993a) and validation procedures (WHC 1993b). Attachments 1 through 5 provide the following information as indicated below:

Attachment 1. Glossary of Data Reporting Qualifiers
Attachment 2. Summary of Data Qualifications
Attachment 3. Qualified Data Summary and Annotated Laboratory Reports
Attachment 4. Laboratory Narrative and Chain-of-Custody Documentation
Attachment 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

Precision. Goals for precision were met.

Accuracy. Goals for accuracy were met.

Sample Result Verification. All sample results were supported in the raw data.

Detection Limits. Detection limit goals were met for all sample results as specified in the reference analytical method.

Completeness. The data package was complete for all requested analyses. A total of six samples were validated in this data package with a total of 24 determinations reported, all of

9413225.0108
001

which were deemed valid. This results in a completeness of 100 percent, which meets normal work plan objectives of 90%.

MAJOR DEFICIENCIES

No major deficiencies were identified during data validation which required qualification of data as unusable.

MINOR DEFICIENCIES

No minor deficiencies were identified during data validation which required qualification of data.

GLOSSARY OF DATA REPORTING QUALIFIERS

9413225.0110

GLOSSARY OF INORGANIC DATA REPORTING QUALIFIERS

B - Indicates the constituent was analyzed for and detected. The concentration reported is less than the contract required detection limit (CRDL) but greater than the instrument detection limit (IDL). The associated data should be considered usable for decision making purposes.

U - Indicates the constituent was analyzed for and not detected. The concentration reported is the sample detection limit corrected for aliquot size, dilution and percent solids (in the case of solid matrices) by the laboratory. The associated data should be considered usable for decision making purposes.

UJ - Indicates the constituent was analyzed for and not detected. Due to a minor quality control deficiency identified during data validation the concentration may not accurately reflect the sample detection limit. The associated data have been qualified as estimated but should be considered usable for decision making purposes.

BJ - Indicates the constituent was analyzed for and detected at a concentration less than the contract required detection limit (CRDL) but greater than the instrument detection limit (IDL). Due to a minor quality control deficiency identified during data validation the associated data have been qualified as estimated, but should be considered usable for decision making purposes.

J - Indicates the constituent was analyzed for and detected. Due to a minor quality control deficiency identified during data validation the associated data have been qualified as estimated, but should be considered usable for decision making purposes.

UR - Indicates the constituent was analyzed for and not detected. Due to a major quality control deficiency identified during data validation, the associated data have been qualified as unusable for decision making purposes.

R - Indicates the constituent was analyzed for and detected. Due to a major quality control deficiency identified during data validation, the associated data have been qualified as unusable for decision making purposes.

CASE NARRATIVE

The holding time for the pH analysis was exceeded. Careful review of the QC analysis indicates that the data is reliable.

No problems were encountered during sample analysis. All QC results were acceptable.

FR: Susan Winter, Golder Associates Inc.

RE: METALS DATA VALIDATION SUMMARY FOR DATA PACKAGE: B09325-TMA-620 (923-E418, Filename B09325.MET)

INTRODUCTION

This memo presents the results of data validation on data package B09325-TMA-620 prepared by the Thermo Analyticals (TMA) laboratory. A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

SAMPLE ID	SAMPLE DATE	MEDIA	ANALYSIS
B09325	09/07/93	SOIL	SEE NOTE 1
B09326	09/07/93	SOIL	
B09327	09/08/93	SOIL	
B09328	09/08/93	SOIL	
B09329	09/08/93	SOIL	
B09330	09/08/93	SOIL	
Note 1. All samples were analyzed for CLP TAL metals, titanium and cyanide.			

MAR 7 1994

Data validation was conducted in accordance with the WHC statement of work (WHC 1993a) and validation procedures (WHC 1993b). Attachments 1 through 5 provide the following information as indicated below:

Attachment 1. Glossary of Data Reporting Qualifiers
Attachment 2. Summary of Data Qualifications
Attachment 3. Qualified Data Summary and Annotated Laboratory Reports
Attachment 4. Laboratory Narrative and Chain-of-Custody Documentation
Attachment 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

Precision. Goals for precision were met.

Accuracy. Goals for accuracy were met with the exception of the deficiencies identified below.

Sample Result Verification. All sample results were supported in the raw data.

Detection Limits. Detection limit goals were met for all sample results as specified in the reference analytical method.

Completeness. The data package was complete for all requested analyses. A total of two samples were validated in this data package with a total of 150 determinations reported, all of

which were deemed valid. This results in a completeness of 100 percent, which meets normal work plan objectives of 90%.

MAJOR DEFICIENCIES

No major deficiencies were identified during data validation which required qualification of data as unusable.

MINOR DEFICIENCIES

The following minor deficiencies were identified during data validation which required qualification of data as estimated.

Laboratory Blanks

- Copper, antimony and beryllium were detected in the laboratory blanks at concentrations greater than the IDL but less than the CRDL. Attachments 2 and 5 provide a summary of the sample affected, data qualification applied and supporting documentation.

Matrix Spike

- The matrix spike percent recovery (MS %R) for antimony was unacceptable. Attachments 2 and 5 provide a summary of the samples affected, data qualifications applied and supporting documentation.

GLOSSARY OF DATA REPORTING QUALIFIERS

9413275.0136

GLOSSARY OF INORGANIC DATA REPORTING QUALIFIERS

B - Indicates the constituent was analyzed for and detected. The concentration reported is less than the contract required detection limit (CRDL) but greater than the instrument detection limit (IDL). The associated data should be considered usable for decision making purposes.

U - Indicates the constituent was analyzed for and not detected. The concentration reported is the sample detection limit corrected for aliquot size, dilution and percent solids (in the case of solid matrices) by the laboratory. The associated data should be considered usable for decision making purposes.

UJ - Indicates the constituent was analyzed for and not detected. Due to a minor quality control deficiency identified during data validation the concentration may not accurately reflect the sample detection limit. The associated data have been qualified as estimated but should be considered usable for decision making purposes.

BJ - Indicates the constituent was analyzed for and detected at a concentration less than the contract required detection limit (CRDL) but greater than the instrument detection limit (IDL). Due to a minor quality control deficiency identified during data validation the associated data have been qualified as estimated, but should be considered usable for decision making purposes.

J - Indicates the constituent was analyzed for and detected. Due to a minor quality control deficiency identified during data validation the associated data have been qualified as estimated, but should be considered usable for decision making purposes.

UR - Indicates the constituent was analyzed for and not detected. Due to a major quality control deficiency identified during data validation, the associated data have been qualified as unusable for decision making purposes.

R - Indicates the constituent was analyzed for and detected. Due to a major quality control deficiency identified during data validation, the associated data have been qualified as unusable for decision making purposes.

Quality Control Narrative

Scope
Six (6) soil samples were submitted to TMA/Skinner & Sherman Laboratories, Inc. on September 14, 1993 from TMA/Norcal. The samples were analyzed for the USEPA CLP Target Analyte List metals, titanium, and cyanide. The analyses were performed under TMA/Skinner and Sherman work order S309093.

Methodology
The samples were prepared, analyzed and reported in accordance with the USEPA Contract Laboratory Program Statement of Work ILM02.

Discussion
All quality control requirements were met for the samples with the following exceptions;

The antimony digestion spike recovery exceeded control limit requirements.

Please feel free to call if there are any questions concerning this package.

Respectfully submitted,

TMA/SKINNER & SHERMAN LABORATORIES, INC.

1. DATA PACKAGE COMPLETENESS AND CASE NARRATIVE

Is technical verification documentation present? . . . . . (Yes) No N/A

Is a case narrative present? . . . . . (Yes) No N/A

Comments:

2. HOLDING TIMES

Are sample holding times acceptable? . . . . . (Yes) No N/A

Comments:

·021

INORGANIC ANALYSIS DATA VALIDATION CHECKLIST

3. INSTRUMENT PERFORMANCE AND CALIBRATIONS

Were initial calibrations performed on all instruments? . . . . Yes No N/A

Are initial calibrations acceptable? . . . . . Yes No N/A

Are ICP interference checks acceptable? . . . . . Yes No N/A

Were ICV and CCV checks performed on all instruments? . . . . Yes No N/A

Are ICV and CCV checks acceptable? . . . . . Yes No N/A

Comments:

4. BLANKS

Were ICB and CCB checks performed for all applicable analyses? Yes No N/A

Are ICB and CCB results acceptable? . . . . . ~~Yes~~ No N/A 2/24/94

Were preparation blanks analyzed? . . . . . Yes No N/A

Are preparation blank results acceptable? . . . . . Yes No N/A

Were field/trip blanks analyzed? . . . . . Yes No N/A

Are field/trip blank results acceptable? . . . . . Yes No N/A

Comments: Several analytes were detected in the lab blanks. However, only copper, beryllium and antimony sample results required qualification as undetected (U). See Attachment 2 for specific samples and qualifications. 3/3/94

5. ACCURACY

Were spike samples analyzed? . . . . . Yes No N/A

Are spike sample recoveries acceptable? . . . . . Yes No N/A

Were laboratory control samples (LCS) analyzed? . . . . . Yes No N/A

Are LCS recoveries acceptable? . . . . . Yes No N/A

Comments: The LCS % R for iron was 46.8%, however the LCS result for iron is within the specific laboratory limits. Therefore, no qualification is required.
Also, the LCS % R for Cr was 72.3% and Mg was 79.1%. However, since the LCS is within the laboratory limits, no qualification is required.

9413225.0155

022

INORGANIC ANALYSIS DATA VALIDATION CHECKLIST

6. PRECISION

Were laboratory duplicates analyzed? . . . . . Yes No N/A

Are laboratory duplicate samples RPD values acceptable? . . . . Yes No N/A

Were ICP serial dilution samples analyzed? . . . . . Yes No N/A

Are ICP serial dilution %D values acceptable? . . . . . Yes No N/A

Are field duplicate RPD values acceptable? . . . . . Yes No N/A

Are field split RPD values acceptable? . . . . . Yes No N/A

Comments:

9413225.0156

7. FURNACE AA QUALITY CONTROL

Were duplicate injections performed as required? . . . . . Yes No N/A

Are duplicate injection %RSD values acceptable? . . . . . Yes No N/A

Were analytical spikes performed as required? . . . . . Yes No N/A

Are analytical spike recoveries acceptable? . . . . . Yes No N/A

Was MSA performed as required? . . . . . Yes No N/A

Are MSA results acceptable? . . . . . Yes No N/A

Comments: The analytes As, Pb, Se and Tl were analyzed by ICP, & the qualification is omitted since the required detection limits have been met.

8. REPORTED RESULTS AND DETECTION LIMITS

Are results reported for all requested analyses? . . . . . Yes No N/A

Are all results supported in the raw data? . . . . . Yes No N/A

Are results calculated properly? . . . . . Yes No N/A

Do results meet the CRDLs? . . . . . Yes No N/A

METALS DATA VALIDATION SUMMARY FOR DATA PACKAGE:
B09325-TMA-620 (923-E418, Filename B09325.MET)

B09325.D160

MEMORANDUM

TO: 200-UP-2 Project QA Record March 3, 1994

FR: Susan Winter, Golder Associates Inc.

RE: METALS DATA VALIDATION SUMMARY FOR DATA PACKAGE: B09325-TMA-620 (923-E418, Filename B09325.MET)

INTRODUCTION

This memo presents the results of data validation on data package B09325-TMA-620 prepared by the Thermo Analyticals (TMA) laboratory. A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

SAMPLE ID	SAMPLE DATE	MEDIA	ANALYSIS
B09325	09/07/93	SOIL	SEE NOTE 1
B09326	09/07/93	SOIL	
B09327	09/08/93	SOIL	
B09328	09/08/93	SOIL	
B09329	09/08/93	SOIL	
B09330	09/08/93	SOIL	

Note 1. All samples were analyzed for CLP TAL metals, titanium and cyanide.

MAR 7 1994

Data validation was conducted in accordance with the WHC statement of work (WHC 1993a) and validation procedures (WHC 1993b). Attachments 1 through 5 provide the following information as indicated below:

Attachment 1. Glossary of Data Reporting Qualifiers
Attachment 2. Summary of Data Qualifications
Attachment 3. Qualified Data Summary and Annotated Laboratory Reports
Attachment 4. Laboratory Narrative and Chain-of-Custody Documentation
Attachment 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

Precision. Goals for precision were met.

Accuracy. Goals for accuracy were met with the exception of the deficiencies identified below.

Sample Result Verification. All sample results were supported in the raw data.

Detection Limits. Detection limit goals were met for all sample results as specified in the reference analytical method.

Completeness. The data package was complete for all requested analyses. A total of two samples were validated in this data package with a total of 150 determinations reported, all of

which were deemed valid. This results in a completeness of 100 percent, which meets normal work plan objectives of 90%.

MAJOR DEFICIENCIES

No major deficiencies were identified during data validation which required qualification of data as unusable.

MINOR DEFICIENCIES

The following minor deficiencies were identified during data validation which required qualification of data as estimated.

9413225.0162

Laboratory Blanks

- Copper, antimony and beryllium were detected in the laboratory blanks at concentrations greater than the IDL but less than the CRDL. Attachments 2 and 5 provide a summary of the sample affected, data qualification applied and supporting documentation.

Matrix Spike

- The matrix spike percent recovery (MS %R) for antimony was unacceptable. Attachments 2 and 5 provide a summary of the samples affected, data qualifications applied and supporting documentation.

GLOSSARY OF DATA REPORTING QUALIFIERS

9413225.0163

GLOSSARY OF INORGANIC DATA REPORTING QUALIFIERS

B - Indicates the constituent was analyzed for and detected. The concentration reported is less than the contract required detection limit (CRDL) but greater than the instrument detection limit (IDL). The associated data should be considered usable for decision making purposes.

U - Indicates the constituent was analyzed for and not detected. The concentration reported is the sample detection limit corrected for aliquot size, dilution and percent solids (in the case of solid matrices) by the laboratory. The associated data should be considered usable for decision making purposes.

UJ - Indicates the constituent was analyzed for and not detected. Due to a minor quality control deficiency identified during data validation the concentration may not accurately reflect the sample detection limit. The associated data have been qualified as estimated but should be considered usable for decision making purposes.

BJ - Indicates the constituent was analyzed for and detected at a concentration less than the contract required detection limit (CRDL) but greater than the instrument detection limit (IDL). Due to a minor quality control deficiency identified during data validation the associated data have been qualified as estimated, but should be considered usable for decision making purposes.

J - Indicates the constituent was analyzed for and detected. Due to a minor quality control deficiency identified during data validation the associated data have been qualified as estimated, but should be considered usable for decision making purposes.

UR - Indicates the constituent was analyzed for and not detected. Due to a major quality control deficiency identified during data validation, the associated data have been qualified as unusable for decision making purposes.

R - Indicates the constituent was analyzed for and detected. Due to a major quality control deficiency identified during data validation, the associated data have been qualified as unusable for decision making purposes.

Quality Control Narrative

Scope
Six (6) soil samples were submitted to TMA/Skinner & Sherman Laboratories, Inc. on September 14, 1993 from TMA/Norcal. The samples were analyzed for the USEPA CLP Target Analyte List metals, titanium, and cyanide. The analyses were performed under TMA/Skinner and Sherman work order S309093.

Methodology
The samples were prepared, analyzed and reported in accordance with the USEPA Contract Laboratory Program Statement of Work ILM02.

Discussion
All quality control requirements were met for the samples with the following exceptions;

The antimony digestion spike recovery exceeded control limit requirements.

Please feel free to call if there are any questions concerning this package.

Respectfully submitted,

TMA/SKINNER & SHERMAN LABORATORIES, INC.

INORGANIC ANALYSIS DATA VALIDATION CHECKLIST

3. INSTRUMENT PERFORMANCE AND CALIBRATIONS

Were initial calibrations performed on all instruments? . . . . Yes No N/A

Are initial calibrations acceptable? . . . . . Yes No N/A

Are ICP interference checks acceptable? . . . . . Yes No N/A

Were ICV and CCV checks performed on all instruments? . . . . . Yes No N/A

Are ICV and CCV checks acceptable? . . . . . Yes No N/A

Comments:

4. BLANKS

Were ICB and CCB checks performed for all applicable analyses? Yes No N/A

Are ICB and CCB results acceptable? . . . . . Yes No N/A 2/24/94

Were preparation blanks analyzed? . . . . . Yes No N/A

Are preparation blank results acceptable? . . . . . Yes No N/A

Were field/trip blanks analyzed? . . . . . Yes No N/A

Are field/trip blank results acceptable? . . . . . Yes No N/A

Comments: Several analytes were detected in the lab blanks. However, only copper, beryllium and antimony sample results required qualification as undetected (U). See Attachment 2 for specific samples and qualifications. 3/3/94

5. ACCURACY

Were spike samples analyzed? . . . . . Yes No N/A

Are spike sample recoveries acceptable? . . . . . Yes No N/A

Were laboratory control samples (LCS) analyzed? . . . . . Yes No N/A

Are LCS recoveries acceptable? . . . . . Yes No N/A

Comments: The LCS %R for iron was 66.8%, however the LCS result for iron is within the specific laboratory limits. Therefore, no qualification is required.
Also, the LCS %R for Cr was 72.3% and Mg was 79.1%. However since the LCS is within the laboratory limits, no qualification is required.

9413225.0182

INORGANIC ANALYSIS DATA VALIDATION CHECKLIST

6. PRECISION

Were laboratory duplicates analyzed? . . . . . Yes No N/A

Are laboratory duplicate samples RPD values acceptable? . . . . Yes No N/A

Were ICP serial dilution samples analyzed? . . . . . Yes No N/A

Are ICP serial dilution %D values acceptable? . . . . . Yes No N/A

Are field duplicate RPD values acceptable? . . . . . Yes No N/A

Are field split RPD values acceptable? . . . . . Yes No N/A

Comments:

7. FURNACE AA QUALITY CONTROL

Were duplicate injections performed as required? . . . . . Yes No N/A

Are duplicate injection %RSD values acceptable? . . . . . Yes No N/A

Were analytical spikes performed as required? . . . . . Yes No N/A

Are analytical spike recoveries acceptable? . . . . . Yes No N/A

Was MSA performed as required? . . . . . Yes No N/A

Are MSA results acceptable? . . . . . Yes No N/A

Comments: The analytes As, Pb, Se and Tl were analyzed by ICP, et. No qualification is required since the required detection limits have been met.

8. REPORTED RESULTS AND DETECTION LIMITS

Are results reported for all requested analyses? . . . . . Yes No N/A

Are all results supported in the raw data? . . . . . Yes No N/A

Are results calculated properly? . . . . . Yes No N/A

Do results meet the CRDLs? . . . . . Yes No N/A

RE: SEMIVOLATILE ORGANIC DATA VALIDATION SUMMARY FOR DATA PACKAGE: B09325-TMA-620 (923-E418, Filename B09325.BNA)

INTRODUCTION

This memo presents the results of data validation on data package B09325-TMA-620 prepared by the Thermo Analytical (TMA) laboratory. A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

SAMPLE ID	SAMPLE DATE	MEDIA	ANALYSIS
B09325	09/07/93	SOIL	~~SEE NOTE 1~~
B09326	09/07/93	SOIL	
B09327	09/08/93	SOIL	
B09328	09/08/93	SOIL	
B09329	09/08/93	SOIL	
B09330	09/08/93	SOIL	

Note 1. All samples were analyzed for CLP TCL Semivolatile Organic Constituents.

Data validation was conducted in accordance with the WHC statement of work (WHC 1993a) and validation procedures (WHC 1993b). Attachments 1 through 5 provide the following information as indicated below:

Attachment 1. Glossary of Data Reporting Qualifiers
Attachment 2. Summary of Data Qualifications
Attachment 3. Qualified Data Summary and Annotated Laboratory Reports
Attachment 4. Laboratory Narrative and Chain-of-Custody Documentation
Attachment 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

This section presents a summary of the data quality in terms of the referenced validation criteria.

Precision. Goals for precision were met.

Accuracy. Goals for accuracy were met.

Sample Result Verification. All sample results were supported in the raw data and properly reported with the exception of the results for 2-chlorophenol, 1,4-dichlorobenzene, 4-chloro-3-methylphenol, and acenaphthene in sample B09327 which were reported as undetected. Attachments 3 and 5 provide a summary of the laboratory results, corrected laboratory report forms and supporting documentation.

Revised 4/21/94

-001

Detection Limits. Detection limit goals were met for all sample results as specified in the reference analytical method.

Completeness. The data package was complete for all requested analyses. A total of six samples were validated in this data package with a total of 384 determinations reported, all of which were deemed valid. This results in a completeness of 100 percent, which meets normal work plan objectives of 90%.

MAJOR DEFICIENCIES

No major deficiencies were identified during data validation which required qualification of data as unusable.

MINOR DEFICIENCIES

The following minor deficiencies were identified during data validation which required qualification of data.

Laboratory Blanks

- Di-n-butylphthalate, bis(2-ethylhexyl)phthalate, and pyrene were detected in the associated laboratory blanks. Attachments 2 and 5 provide a summary of the samples affected, data qualifications applied and supporting documentation.

TENTATIVELY IDENTIFIED COMPOUND EVALUATION

Tentatively identified compounds (TICs) reported by the laboratory were evaluated during validation and qualified as follows:

- TICs were detected in the samples and associated laboratory blank and were common laboratory contaminants, resulting in qualification of the TICs as unusable (UR) as shown in Attachment 3.

- TICs were detected in the samples and associated laboratory blank and have been qualified due to associated blank contamination and have been determined to be presumptive and valid (UJN).

- TICs were detected in the samples and determined to be valid, resulting in qualification of the results as presumptive and valid (JN).

GLOSSARY OF ORGANIC DATA REPORTING QUALIFIERS

B - Indicates the constituent was analyzed for and detected in the associated laboratory blank. This qualifier is applied by the laboratory. During the process of data validation this qualifier may be replaced by other appropriate qualifiers as defined by the validation procedures. The associated data should be considered usable for decision making purposes.

U - Indicates the constituent was analyzed for and not detected. The concentration reported is the sample quantitation limit corrected for aliquot size, dilution and percent solids (in the case of solid matrices) by the laboratory. The associated data should be considered usable for decision making purposes.

UJ - Indicates the constituent was analyzed for and not detected. Due to a minor quality control deficiency identified during data validation the concentration reported may not accurately reflect the sample quantitation limit. The associated data should be considered usable for decision making purposes.

J - Indicates the constituent was analyzed for and detected. This qualifier may be applied by the laboratory to indicate a concentration which is less than the contract required quantitation limit (CRQL) but greater than the instrument detection limit (IDL). During data validation this qualifier may be applied to indicate a minor quality control deficiency. However in either case, the associated data should be considered usable for decision making purposes.

NJ - Indicates presumptive evidence of a constituent at an estimated value. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

N - Indicates presumptive evidence of a constituent. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

JN - Indicates a tentatively identified compound (TIC) whose concentration and identification have been determined to be valid as a result of data validation. The associated data should be considered usable for decision making purposes.

UJN - Indicates a tentatively identified compound (TIC) that has been determined to be presumptive and valid (JN) in terms of identification and quantitation and has been qualified as undetected (U) due to associated blank contamination.

UR - Indicates the constituent was analyzed for and not detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

R - Indicates the constituent was analyzed for and detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

CASE NARRATIVE

LABORATORY : TMA/ARLI

CASE : 09-021

CONTRACT ID : WESTINGHOUSE HANFORD COMPANY

SDG RECEIPT DATE : September 10, 1993

1.0 DESCRIPTION OF CASE :

Seven soil samples were analyzed for TCL Organics- Volatiles and Semivolatiles according to the USEPA Contract Laboratory Program (CLP) Statement of Work for Organic Analysis, Revision OLM01.8. The Extractable Hydrocarbons for Kerosene (K) were analyzed according to the SW-846 Method 8015M.

2.0 SAMPLE LIST :

3.0 COMMENTS :

3.1 SHIPPING AND DOCUMENTATION :

All of the samples were received intact and properly documented.

3.2 ANALYSIS

3.2.1 VOLATILE ANALYSIS COMMENTS :

LOW LEVEL SOIL :

The samples were analyzed by heated purge within the CLP SOW holding times.

All of the QC results were within the limits specified by the EPA CLP SOW.

TUNES :

All BFB tunes were injected directly into the GC/MS instrument.

3.2.2 SEMIVOLATILE ANALYSIS COMMENTS :

LOW LEVEL SOIL :

The samples were extracted and analyzed within the CLP SOW holding times.

Sample B09327 had a Terphenyl-d14 surrogate recovery slightly above the QC limits. Sample B09326MSD had matrix spike recoveries for Phenol and 2,4-Dinitrotoluene that were slightly above the QC limits. In accordance with CLP protocol, no further action was required.

Pyrene was detected in sample B09327 at a concentration below the CRQL.

All of the other QC results were within the limits specified by the EPA CLP SOW.

3.2.3 EXTRACTABLE HYDROCARBONS "KEROSENE RANGE" COMMENTS :

SEQUENCE NOTES :

The sequence was started on 09/16/93 and was analyzed according to the SW-846 Method 8015M. The initial calibration consisted of 5 different levels of the Kerosene standard that ranged from 200ppm to 2000ppm. The continuing calibration at the 1000ppm level was injected amongst a series of samples, in order to verify the instrument stability. The %RSD in the initial calibration and the %D in the continuing calibration were below their 20% and 15% limits, respectively.

94/3225.0218

SAMPLE NOTES :

LOW LEVEL SOIL :

The samples were extracted and analyzed for extractable hydrocarbons in the Kerosene range within the required holding times. Approximately 20 g of each sample was extracted and concentrated to 5 mL.

There were no hydrocarbons in the Kerosene range detected in any of the samples. Sample B09330 was spiked with Kerosene and the matrix spike recoveries were between 81% and 84%. A blank spike was prepared at the same time, and had an 86% recovery.

All of the QC results were within the limits specified by the SW-846 Method 8015M.

9475225.0219

We certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data in this hardcopy data package and in the computer-readable data submitted on diskette is authorized by the Laboratory Manager or his designee, as verified by the following signatures.

B09327
B09328
B09329

9413225.0224

1. DATA PACKAGE COMPLETENESS AND CASE NARRATIVE

Is technical verification documentation present? . . . . . (Yes) No N/A

Is a case narrative present? . . . . . (Yes) No N/A

Comments:

2. HOLDING TIMES

Are sample holding times acceptable? . . . . . (Yes) No N/A

Comments:

037

GC/MS ORGANIC DATA VALIDATION CHECKLIST

3. INSTRUMENT TUNING AND CALIBRATION

Is the GC/MS tuning/performance check acceptable? . . . . . Yes No N/A

Are initial calibrations acceptable? . . . . . Yes No N/A

Are continuing calibrations acceptable? . . . . . Yes No N/A

Comments: ~~The amount of standard~~ Half of the amount of standard stated in the SOW was used for the ICV and CCV. The ratio of Internal std. to ICV and CCV standards are the same as required therefore, no qualification was required. See comments on last page of checklist for further information.

4. BLANKS

Were laboratory blanks analyzed? . . . . . Yes No N/A

Are laboratory blank results acceptable? . . . . . Yes No N/A

Were field/trip blanks analyzed? . . . . . Yes No N/A

Are field/trip blank results acceptable? . . . . . Yes No N/A

Comments: Pyrene was detected in SBLKC91353 at 15 J ug/kg. Therefore, the sample result for B-9327 has been qualified as undetected (U).

3/3/94

5. ACCURACY

Were surrogates/System Monitoring Compounds analyzed? . . . . . Yes No N/A

Are surrogate/System Monitoring Compound recoveries acceptable? Yes No N/A See (1)

Were MS/MSD samples analyzed? . . . . . Yes No N/A

Are MS/MSD results acceptable? . . . . . Yes No N/A See (2)

Comments: (1) The surrogate terphenyl-d14 had a high recovery of 144% (upper limit is 137%) in sample B-9327. No qualification was required since 2 surrogates of the same group (base/neutrals) ~~[illegible]~~ need to be out of control limits to justify data qualification.

(2) The MSD%R for phenol and 2,4-dinitrotoluene were 94% and 98%, respectively, greater than the upper control limits. However, no qualification was applied since the surrogates for the spiked sample were in control limits and 94% and 95% are close to 100% recovery.

038

9413225.0225

GC/MS ORGANIC DATA VALIDATION CHECKLIST

6. PRECISION

Are MS/MSD RPD values acceptable? . . . . . Yes No N/A

Are field duplicate RPD values acceptable? . . . . . Yes No N/A

Are field split RPD values acceptable? . . . . . Yes No N/A

Comments:

7. SYSTEM PERFORMANCE

Were internal standards analyzed? . . . . . Yes No N/A

Are internal standard areas acceptable? . . . . . Yes No N/A

Are internal standard retention times acceptable? . . . . . Yes No N/A

Comments:

8. COMPOUND IDENTIFICATION AND QUANTITATION

Is compound identification acceptable? . . . . . Yes No N/A

Is compound quantitation acceptable? . . . . . Yes No N/A

Comments:

9. REPORTED RESULTS AND QUANTITATION LIMITS

Are results reported for all requested analyses? . . . . . Yes No N/A

Are all results supported in the raw data? . . . . . Yes No N/A

Do results meet the CRQLs? . . . . . Yes No N/A

Has the laboratory properly identified and coded all TIC? . . . Yes No N/A

Comments: TICs have been qualified according to the DV procedure.

Revised [illegible] 4/21/94

9413225.0226

GC/MS ORGANIC DATA VALIDATION CHECKLIST

Comments (attach additional sheets as necessary):

The minimum RRF for surrogate 1,2-Dichlorobenzene-d4 was recorded by the laboratory as 0.800, however, it is 0.400 according to the SOW. No qualification is required ~~Attached Information is provided, See attachments.~~ 3/3/94

2/25/94

CALCULATION SUMMARY

B09325-TMA-620

SDG:	REVIEWER: [signature]	DATE: 2/25/94	PAGE 1 OF 1

COMMENTS: Sample B09327 Calculations

$$\frac{ug}{kg} = \frac{(A_x)(I_s)(V_t)}{(A_i)(RRF)(V_i)(W_s)(D)} \times 2 \text{ for GPC} \times 2 \text{ for Internal Standard Dilution}$$

ug/kg 2-Chlorophenol (B09327)

$$= \frac{(1338)(20)(500)(2)(2)}{(25202)(1.173)(2)(30.5)(0.94)} = 31.4 = 31 \text{ ug/kg}$$

~~62.8 = 63 ug/kg~~

ug/kg 1,4-Dichlorobenzene (B09327)

$$= \frac{(948)(20)(500)(2)(2)}{(25202)(1.307)(2)(30.5)(0.94)} = 20 \text{ ug/kg}$$

ug/kg 4-Chloro-3-Methylphenol (B09327)

$$= \frac{(1090)(20)(500)(2)(2)}{(97462)(0.288)(2)(30.5)(0.94)} = 27 \text{ ug/kg}$$

ug/kg Acenaphthene (B09327)

$$= \frac{(1628)(20)(500)(2)(2)}{(51718)(0.963)(2)(30.5)(0.94)} = 25 \text{ ug/kg}$$

SEMIVOLATILE ORGANIC DATA VALIDATION SUMMARY FOR DATA PACKAGE:
B09325-TMA-620 (923-E418, Filename B09325.BNA)

9413225.0239

MEMORANDUM

MAR 1994 RECEIVED TQO

TO: 200-UP-2 Project QA Record March 3, 1994

FR: Susan Winter, Golder Associates Inc.

RE: SEMIVOLATILE ORGANIC DATA VALIDATION SUMMARY FOR DATA PACKAGE: B09325-TMA-620 (923-E418, Filename B09325.BNA)

INTRODUCTION

This memo presents the results of data validation on data package B09325-TMA-620 prepared by the Thermo Analytical (TMA) laboratory. A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

SAMPLE ID	SAMPLE DATE	MEDIA	ANALYSIS
B09325	09/07/93	SOIL	SEE NOTE 1
B09326	09/07/93	SOIL	
B09327	09/08/93	SOIL	
B09328	09/08/93	SOIL	
B09329	09/08/93	SOIL	
B09330	09/08/93	SOIL	
Note 1. All samples were analyzed for CLP TCL Semivolatile Organic Constituents.			

Data validation was conducted in accordance with the WHC statement of work (WHC 1993a) and validation procedures (WHC 1993b). Attachments 1 through 5 provide the following information as indicated below:

Attachment 1. Glossary of Data Reporting Qualifiers
Attachment 2. Summary of Data Qualifications
Attachment 3. Qualified Data Summary and Annotated Laboratory Reports
Attachment 4. Laboratory Narrative and Chain-of-Custody Documentation
Attachment 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

Precision. Goals for precision were met.

Accuracy. Goals for accuracy were met.

Sample Result Verification. All sample results were supported in the raw data and properly reported with the exception of the results for 2-chlorophenol, 1,4-dichlorobenzene, 4-chloro-3-methylphenol, and acenaphthene in sample B09327 which were reported as undetected. Attachments 3 and 5 provide a summary of the laboratory results, corrected laboratory report forms and supporting documentation.

Detection Limits. Detection limit goals were met for all sample results as specified in the reference analytical method.

001

Completeness. The data package was complete for all requested analyses. A total of six samples were validated in this data package with a total of 384 determinations reported, all of which were deemed valid. This results in a completeness of 100 percent, which meets normal work plan objectives of 90%.

MAJOR DEFICIENCIES

The following major deficiencies were identified during data validation which required qualification of data as unusable.

- Tentatively identified compounds (TIC) identified as aldol condensate compounds have been qualified as unusable (UR) since they are suspected laboratory contaminants. Attachments 2 and 5 provide a summary of the samples affected, data qualifications applied and supporting documentation. However, these qualifications do not affect the percent completeness since the TICs are not TCL compounds.

MINOR DEFICIENCIES

The following minor deficiencies were identified during data validation which required qualification of data.

Laboratory Blanks

- Di-n-butylphthalate, bis(2-ethylhexyl)phthalate, pyrene, and three TICs, as listed in Attachment 2, were detected in the associated laboratory blanks. Attachments 2 and 5 provide a summary of the samples affected, data qualifications applied and supporting documentation.

GLOSSARY OF DATA REPORTING QUALIFIERS

9417225.0242

GLOSSARY OF ORGANIC DATA REPORTING QUALIFIERS

B - Indicates the constituent was analyzed for and detected in the associated laboratory blank. This qualifier is applied by the laboratory. During the process of data validation this qualifier may be replaced by other appropriate qualifiers as defined by the validation procedures. The associated data should be considered usable for decision making purposes.

U - Indicates the constituent was analyzed for and not detected. The concentration reported is the sample quantitation limit corrected for aliquot size, dilution and percent solids (in the case of solid matrices) by the laboratory. The associated data should be considered usable for decision making purposes.

UJ - Indicates the constituent was analyzed for and not detected. Due to a minor quality control deficiency identified during data validation the concentration reported may not accurately reflect the sample quantitation limit. The associated data should be considered usable for decision making purposes.

J - Indicates the constituent was analyzed for and detected. This qualifier may be applied by the laboratory to indicate a concentration which is less than the contract required quantitation limit (CRQL) but greater than the instrument detection limit (IDL). During data validation this qualifier may be applied to indicate a minor quality control deficiency. However in either case, the associated data should be considered usable for decision making purposes.

NJ - Indicates presumptive evidence of a constituent at an estimated value. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

N - Indicates presumptive evidence of a constituent. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

JN - Indicates a tentatively identified compound (TIC) whose concentration and identification have been determined to be valid as a result of data validation. The associated data should be considered usable for decision making purposes.

UR - Indicates the constituent was analyzed for and not detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

R - Indicates the constituent was analyzed for and detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

CASE NARRATIVE

LABORATORY : TMA/ARLI

CASE : 09-021

CONTRACT ID : WESTINGHOUSE HANFORD COMPANY

SDG RECEIPT DATE : September 10, 1993

1.0 DESCRIPTION OF CASE :

Seven soil samples were analyzed for TCL Organics- Volatiles and Semivolatiles according to the USEPA Contract Laboratory Program (CLP) Statement of Work for Organic Analysis, Revision OLM01.8. The Extractable Hydrocarbons for Kerosene (K) were analyzed according to the SW-846 Method 8015M.

2.0 SAMPLE LIST :

3.0 COMMENTS :

3.1 SHIPPING AND DOCUMENTATION :

All of the samples were received intact and properly documented.

3.2 ANALYSIS

3.2.1 VOLATILE ANALYSIS COMMENTS :

LOW LEVEL SOIL :

The samples were analyzed by heated purge within the CLP SOW holding times.

All of the QC results were within the limits specified by the EPA CLP SOW.

TUNES :

All BFB tunes were injected directly into the GC/MS instrument.

3.2.2 SEMIVOLATILE ANALYSIS COMMENTS :

LOW LEVEL SOIL :

The samples were extracted and analyzed within the CLP SOW holding times.

Sample B09327 had a Terphenyl-d14 surrogate recovery slightly above the QC limits. Sample B09326MSD had matrix spike recoveries for Phenol and 2,4-Dinitrotoluene that were slightly above the QC limits. In accordance with CLP protocol, no further action was required.

Pyrene was detected in sample B09327 at a concentration below the CRQL.

All of the other QC results were within the limits specified by the EPA CLP SOW.

3.2.3 EXTRACTABLE HYDROCARBONS "KEROSENE RANGE" COMMENTS :

SEQUENCE NOTES :

The sequence was started on 09/16/93 and was analyzed according to the SW-846 Method 8015M. The initial calibration consisted of 5 different levels of the Kerosene standard that ranged from 200ppm to 2000ppm. The continuing calibration at the 1000ppm level was injected amongst a series of samples, in order to verify the instrument stability. The %RSD in the initial calibration and the %D in the continuing calibration were below their 20% and 15% limits, respectively.

9413225.0270

SAMPLE NOTES :

LOW LEVEL SOIL :

The samples were extracted and analyzed for extractable hydrocarbons in the Kerosene range within the required holding times. Approximately 20 g of each sample was extracted and concentrated to 5 mL.

There were no hydrocarbons in the Kerosene range detected in any of the samples. Sample B09330 was spiked with Kerosene and the matrix spike recoveries were between 81% and 84%. A blank spike was prepared at the same time, and had an 86% recovery.

All of the QC results were within the limits specified by the SW-846 Method 8015M.

9417225.0271

We certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data in this hardcopy data package and in the computer-readable data submitted on diskette is authorized by the Laboratory Manager or his designee, as verified by the following signatures.

SAMPLES/MATRIX Soils

B09325 B09330

B09326

B09327

B09328

B09329

1. DATA PACKAGE COMPLETENESS AND CASE NARRATIVE

Is technical verification documentation present? . . . . . (Yes) No N/A

Is a case narrative present? . . . . . (Yes) No N/A

Comments:

2. HOLDING TIMES

Are sample holding times acceptable? . . . . . (Yes) No N/A

Comments:

-037

9413225.0276

GC/MS ORGANIC DATA VALIDATION CHECKLIST

3. INSTRUMENT TUNING AND CALIBRATION

Is the GC/MS tuning/performance check acceptable? . . . . . (Yes) No N/A

Are initial calibrations acceptable? . . . . . (Yes) No N/A

Are continuing calibrations acceptable? . . . . . (Yes) No N/A

Comments: ~~The amount Substituted~~ Half of the amount of standard stated in the SOW was used for the ICV and CCV. The ratio of Internal std. to ICV and CCV standards are the same as required, therefore, no qualification was required. See comments on last page of checklist for further information.

4. BLANKS

Were laboratory blanks analyzed? . . . . . (Yes) No N/A

Are laboratory blank results acceptable? . . . . . Yes (No) N/A

Were field/trip blanks analyzed? . . . . . Yes (No) N/A

Are field/trip blank results acceptable? . . . . . Yes No (N/A)

Comments: Pyrene was detected in SBLKC91353 at 15.5 ug/kg. Therefore, the sample result for B-9327 has been qualified as undetected (U). 3/3/94

5. ACCURACY

Were surrogates/System Monitoring Compounds analyzed? . . . . . (Yes) No N/A

Are surrogate/System Monitoring Compound recoveries acceptable? Yes (No) N/A See (1)

Were MS/MSD samples analyzed? . . . . . (Yes) No N/A

Are MS/MSD results acceptable? . . . . . Yes (No) N/A See (2)

Comments: (1) The Surrogate 2-chlorophenol-d4 had a high recovery of 144% (upper limit is 137%) in sample B-9327. No qualification was required since 2 surrogates of the same group (acid/phenols) need to be out of control limits to justify data qualification.

(2) The MSD %R for phenol and 2,4-dinitrotoluene were 94% and 98%, respectively, greater than the upper control limits. However, no qualification was applied since the surrogates for the spiked sample were in control limits and 94% and 99% are close to 100% recovery.

GC/MS ORGANIC DATA VALIDATION CHECKLIST

6. PRECISION

Are MS/MSD RPD values acceptable? . . . . . Yes No N/A

Are field duplicate RPD values acceptable? . . . . . Yes No N/A

Are field split RPD values acceptable? . . . . . Yes No N/A

Comments:

7. SYSTEM PERFORMANCE

Were internal standards analyzed? . . . . . Yes No N/A

Are internal standard areas acceptable? . . . . . Yes No N/A

Are internal standard retention times acceptable? . . . . . Yes No N/A

Comments:

8. COMPOUND IDENTIFICATION AND QUANTITATION

Is compound identification acceptable? . . . . . Yes No N/A

Is compound quantitation acceptable? . . . . . Yes No N/A

Comments:

9. REPORTED RESULTS AND QUANTITATION LIMITS

Are results reported for all requested analyses? . . . . . Yes No N/A

Are all results supported in the raw data? . . . . . Yes No N/A

Do results meet the CRQLs? . . . . . Yes No N/A

Has the laboratory properly identified and coded all TIC? . . . Yes No N/A

Comments:

9413225.0278

GC/MS ORGANIC DATA VALIDATION CHECKLIST

Comments (attach additional sheets as necessary):

The minimum RRF for surrogate 1,2-Dichlorobenzene-d4 was reported by the laboratory as 0.800, however, it is 0.400 according to the SOW. No qualification is required. ~~Attached Information is provided, see attachments~~ 3/3/94

RE: VOLATILE ORGANIC DATA VALIDATION SUMMARY FOR DATA PACKAGE: B09325-TMA-620 (923-E418, Filename B09325.VOA)

INTRODUCTION

This memo presents the results of data validation on data package B09325-TMA-620 prepared by the Thermo Analytical (TMA) laboratory. A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

SAMPLE ID	SAMPLE DATE	MEDIA	ANALYSIS
B09325	09/07/93	SOIL	SEE NOTE 1
B09326	09/07/93	SOIL	
B09327	09/08/93	SOIL	
B09328	09/08/93	SOIL	
B09329	09/08/93	SOIL	
B09330	09/08/93	SOIL	
B09331	09/08/93	SOIL	

Note 1. All samples were analyzed for CLP TCL volatiles.

Data validation was conducted in accordance with the WHC statement of work (WHC 1993a) and validation procedures (WHC 1993b). Attachments 1 through 5 provide the following information as indicated below:

Attachment 1. Glossary of Data Reporting Qualifiers
Attachment 2. Summary of Data Qualifications
Attachment 3. Qualified Data Summary and Annotated Laboratory Reports
Attachment 4. Laboratory Narrative and Chain-of-Custody Documentation
Attachment 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

Precision. Goals for precision were met.

Accuracy. Goals for accuracy were met.

Sample Result Verification. All sample results were supported in the raw data with the exception of acetone which was detected in sample B09329 at a concentration of 12 µg/kg. Attachments 2 and 5 provide summaries of the corrected result and supporting documentation.

Detection Limits. Detection limit goals were met for all sample results as specified in the reference analytical method.

001

Completeness. The data package was complete for all requested analyses. A total of five samples were validated in this data package with a total of 231 determinations reported, all of which were deemed valid. This results in a completeness of 100 percent, which meets normal work plan objectives of 90%.

Sample B09331 was identified as a solid trip blank in which all results were verified as nondetects with the exception of two TCL compounds, acetone and toluene at concentrations of 8 µg/kg and 9 µg/kg, respectively, and one tentatively identified compound (TIC) labeled as an unknown hydrocarbon, 8 µg/kg, at retention time 27.50. This sample, B09331, is the only sample in this data package in which a TIC was detected.

MAJOR DEFICIENCIES

No major deficiencies were identified during data validation which required qualification of data as unusable.

MINOR DEFICIENCIES

The following minor deficiencies were identified during data validation which required qualification of data.

Laboratory Blanks

- Methylene chloride and acetone were present in the associated laboratory blanks. Attachments 2 and 5 provide a summary of the affected samples, data qualifications applied and supporting documentation.

GLOSSARY OF DATA REPORTING QUALIFIERS

9413225.0294

GLOSSARY OF ORGANIC DATA REPORTING QUALIFIERS

B - Indicates the constituent was analyzed for and detected in the associated laboratory blank. This qualifier is applied by the laboratory. During the process of data validation this qualifier may be replaced by other appropriate qualifiers as defined by the validation procedures. The associated data should be considered usable for decision making purposes.

U - Indicates the constituent was analyzed for and not detected. The concentration reported is the sample quantitation limit corrected for aliquot size, dilution and percent solids (in the case of solid matrices) by the laboratory. The associated data should be considered usable for decision making purposes.

UJ - Indicates the constituent was analyzed for and not detected. Due to a minor quality control deficiency identified during data validation the concentration reported may not accurately reflect the sample quantitation limit. The associated data should be considered usable for decision making purposes.

J - Indicates the constituent was analyzed for and detected. This qualifier may be applied by the laboratory to indicate a concentration which is less than the contract required quantitation limit (CRQL) but greater than the instrument detection limit (IDL). During data validation this qualifier may be applied to indicate a minor quality control deficiency. However in either case, the associated data should be considered usable for decision making purposes.

NJ - Indicates presumptive evidence of a constituent at an estimated value. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

N - Indicates presumptive evidence of a constituent. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

JN - Indicates a tentatively identified compound (TIC) whose concentration and identification have been determined to be valid as a result of data validation. The associated data should be considered usable for decision making purposes.

UR - Indicates the constituent was analyzed for and not detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

R - Indicates the constituent was analyzed for and detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

CASE NARRATIVE

LABORATORY : TMA/ARLI

CASE : 09-021

CONTRACT ID : WESTINGHOUSE HANFORD COMPANY

SDG RECEIPT DATE : September 10, 1993

1.0 DESCRIPTION OF CASE :

Seven soil samples were analyzed for TCL Organics- Volatiles and Semivolatiles according to the USEPA Contract Laboratory Program (CLP) Statement of Work for Organic Analysis, Revision OLM01.8. The Extractable Hydrocarbons for Kerosene (K) were analyzed according to the SW-846 Method 8015M.

3.0 COMMENTS :

3.1 SHIPPING AND DOCUMENTATION :

All of the samples were received intact and properly documented.

3.2 ANALYSIS

3.2.1 VOLATILE ANALYSIS COMMENTS :

LOW LEVEL SOIL :

The samples were analyzed by heated purge within the CLP SOW holding times.

All of the QC results were within the limits specified by the EPA CLP SOW.

TUNES :

All BFB tunes were injected directly into the GC/MS instrument.

3.2.2 SEMIVOLATILE ANALYSIS COMMENTS :

LOW LEVEL SOIL :

The samples were extracted and analyzed within the CLP SOW holding times.

Sample B09327 had a Terphenyl-d14 surrogate recovery slightly above the QC limits. Sample B09326MSD had matrix spike recoveries for Phenol and 2,4-Dinitrotoluene that were slightly above the QC limits. In accordance with CLP protocol, no further action was required.

Pyrene was detected in sample B09327 at a concentration below the CRQL.

All of the other QC results were within the limits specified by the EPA CLP SOW.

3.2.3 EXTRACTABLE HYDROCARBONS "KEROSENE RANGE" COMMENTS :

SEQUENCE NOTES :

The sequence was started on 09/16/93 and was analyzed according to the SW-846 Method 3015M. The initial calibration consisted of 5 different levels of the Kerosene standard that ranged from 200ppm to 2000ppm. The continuing calibration at the 1000ppm level was injected amongst a series of samples, in order to verify the instrument stability. The %RSD in the initial calibration and the %D in the continuing calibration were below their 20% and 15% limits, respectively.

SAMPLE NOTES :

LOW LEVEL SOIL :

The samples were extracted and analyzed for extractable hydrocarbons in the Kerosene range within the required holding times. Approximately 20 g of each sample was extracted and concentrated to 5 mL.

There were no hydrocarbons in the Kerosene range detected in any of the samples. Sample B09330 was spiked with Kerosene and the matrix spike recoveries were between 81% and 84%. A blank spike was prepared at the same time, and had an 86% recovery.

All of the QC results were within the limits specified by the SW-846 Method 8015M.

94/9225.0318

We certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data in this hardcopy data package and in the computer-readable data submitted on diskette is authorized by the Laboratory Manager or his designee, as verified by the following signatures.

1. DATA PACKAGE COMPLETENESS AND CASE NARRATIVE

Is technical verification documentation present? . . . . . (Yes) No N/A

Is a case narrative present? . . . . . (Yes) No N/A

Comments:

2. HOLDING TIMES

Are sample holding times acceptable? . . . . . (Yes) No N/A

Comments:

033

GC/MS ORGANIC DATA VALIDATION CHECKLIST

3. INSTRUMENT TUNING AND CALIBRATION

Is the GC/MS tuning/performance check acceptable? . . . . . Yes No N/A

Are initial calibrations acceptable? . . . . . Yes No N/A

Are continuing calibrations acceptable? . . . . . Yes No N/A

Comments:

4. BLANKS

Were laboratory blanks analyzed? . . . . . Yes No N/A

Are laboratory blank results acceptable? . . . . . Yes No N/A

Were field/trip blanks analyzed? . . . . . Yes No N/A

Are field/trip blank results acceptable? . . . . . Yes No N/A

Comments: See comments on last page of checklist.

5. ACCURACY

Were surrogates/System Monitoring Compounds analyzed? . . . . . Yes No N/A

Are surrogate/System Monitoring Compound recoveries acceptable? Yes No N/A

Were MS/MSD samples analyzed? . . . . . Yes No N/A

Are MS/MSD results acceptable? . . . . . Yes No N/A

Comments:

GC/MS ORGANIC DATA VALIDATION CHECKLIST

6. PRECISION

Are MS/MSD RPD values acceptable? . . . . . Yes No N/A

Are field duplicate RPD values acceptable? . . . . . Yes No N/A

Are field split RPD values acceptable? . . . . . Yes No N/A

Comments:

7. SYSTEM PERFORMANCE

Were internal standards analyzed? . . . . . Yes No N/A

Are internal standard areas acceptable? . . . . . Yes No N/A

Are internal standard retention times acceptable? . . . . . Yes No N/A

Comments:

8. COMPOUND IDENTIFICATION AND QUANTITATION

Is compound identification acceptable? . . . . . Yes No N/A

Is compound quantitation acceptable? . . . . . Yes No N/A

Comments:

9. REPORTED RESULTS AND QUANTITATION LIMITS

Are results reported for all requested analyses? . . . . . Yes No N/A

Are all results supported in the raw data? See comments [illegible] . . . . Yes No N/A

Do results meet the CRQLs? . . . . . Yes No N/A

Has the laboratory properly identified and coded all TIC? . . . Yes No N/A

Comments: Acetone was detected in sample B=9329 at 12 [illegible]. See attached [illegible] data for verification.

9413225.0326

035

GC/MS ORGANIC DATA VALIDATION CHECKLIST

Comments (attach additional sheets as necessary):

Methylene Chloride and acetone were detected in the lab blank associated with samples B09325, B09326, and B09327.

Methylene chloride was detected in the lab blank associated with samples B09328, B09329, B09330, and B09331.

Sample B09331 was identified as a solid trip blank and contains acetone, toluene, and a TIC identified as an unknown hydrocarbon at R.T. 27.50 minutes.

RE: VOLATILE ORGANIC DATA VALIDATION SUMMARY FOR DATA PACKAGE: B09325-TMA-620 (923-E418, Filename B09325.VOA)

INTRODUCTION

This memo presents the results of data validation on data package B09325-TMA-620 prepared by the Thermo Analytical (TMA) laboratory. A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

SAMPLE ID	SAMPLE DATE	MEDIA	ANALYSIS
B09325	09/07/93	SOIL	SEE NOTE 1
B09326	09/07/93	SOIL	
B09327	09/08/93	SOIL	
B09328	09/08/93	SOIL	
B09329	09/08/93	SOIL	
B09330	09/08/93	SOIL	
B09331	09/08/93	SOIL	
Note 1. All samples were analyzed for CLP TCL volatiles.			

Data validation was conducted in accordance with the WHC statement of work (WHC 1993a) and validation procedures (WHC 1993b). Attachments 1 through 5 provide the following information as indicated below:

Attachment 1. Glossary of Data Reporting Qualifiers
Attachment 2. Summary of Data Qualifications
Attachment 3. Qualified Data Summary and Annotated Laboratory Reports
Attachment 4. Laboratory Narrative and Chain-of-Custody Documentation
Attachment 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

Precision. Goals for precision were met.

Accuracy. Goals for accuracy were met.

Sample Result Verification. All sample results were supported in the raw data with the exception of acetone which was detected in sample B09329 at a concentration of 12 µg/kg. Attachments 2 and 5 provide summaries of the corrected result and supporting documentation.

Detection Limits. Detection limit goals were met for all sample results as specified in the reference analytical method.

001

Completeness. The data package was complete for all requested analyses. A total of five samples were validated in this data package with a total of 231 determinations reported, all of which were deemed valid. This results in a completeness of 100 percent, which meets normal work plan objectives of 90%.

Sample B09331 was identified as a solid trip blank in which all results were verified as nondetects with the exception of two TCL compounds, acetone and toluene at concentrations of 8 µg/kg and 9 µg/kg, respectively, and one tentatively identified compound (TIC) labeled as an unknown hydrocarbon, 8 µg/kg, at retention time 27.50. This sample, B09331, is the only sample in this data package in which a TIC was detected.

MAJOR DEFICIENCIES

No major deficiencies were identified during data validation which required qualification of data as unusable.

MINOR DEFICIENCIES

The following minor deficiencies were identified during data validation which required qualification of data.

Laboratory Blanks

- Methylene chloride and acetone were present in the associated laboratory blanks. Attachments 2 and 5 provide a summary of the affected samples, data qualifications applied and supporting documentation.

GLOSSARY OF DATA REPORTING QUALIFIERS

9403225.0341

GLOSSARY OF ORGANIC DATA REPORTING QUALIFIERS

B - Indicates the constituent was analyzed for and detected in the associated laboratory blank. This qualifier is applied by the laboratory. During the process of data validation this qualifier may be replaced by other appropriate qualifiers as defined by the validation procedures. The associated data should be considered usable for decision making purposes.

U - Indicates the constituent was analyzed for and not detected. The concentration reported is the sample quantitation limit corrected for aliquot size, dilution and percent solids (in the case of solid matrices) by the laboratory. The associated data should be considered usable for decision making purposes.

UJ - Indicates the constituent was analyzed for and not detected. Due to a minor quality control deficiency identified during data validation the concentration reported may not accurately reflect the sample quantitation limit. The associated data should be considered usable for decision making purposes.

J - Indicates the constituent was analyzed for and detected. This qualifier may be applied by the laboratory to indicate a concentration which is less than the contract required quantitation limit (CRQL) but greater than the instrument detection limit (IDL). During data validation this qualifier may be applied to indicate a minor quality control deficiency. However in either case, the associated data should be considered usable for decision making purposes.

NJ - Indicates presumptive evidence of a constituent at an estimated value. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

N - Indicates presumptive evidence of a constituent. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

JN - Indicates a tentatively identified compound (TIC) whose concentration and identification have been determined to be valid as a result of data validation. The associated data should be considered usable for decision making purposes.

UR - Indicates the constituent was analyzed for and not detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

R - Indicates the constituent was analyzed for and detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

CASE NARRATIVE

LABORATORY : TMA/ARLI

CASE : 09-021

CONTRACT ID : WESTINGHOUSE HANFORD COMPANY

SDG RECEIPT DATE : September 10, 1993

1.0 DESCRIPTION OF CASE :

Seven soil samples were analyzed for TCL Organics- Volatiles and Semivolatiles according to the USEPA Contract Laboratory Program (CLP) Statement of Work for Organic Analysis, Revision OLM01.8. The Extractable Hydrocarbons for Kerosene (K) were analyzed according to the SW-846 Method 8015M.

2.0 SAMPLE LIST :

3.0 COMMENTS :

3.1 SHIPPING AND DOCUMENTATION :

All of the samples were received intact and properly documented.

3.2 ANALYSIS

3.2.1 VOLATILE ANALYSIS COMMENTS :

LOW LEVEL SOIL :

The samples were analyzed by heated purge within the CLP SOW holding times.

All of the QC results were within the limits specified by the EPA CLP SOW.

TUNES :

All BFB tunes were injected directly into the GC/MS instrument.

3.2.2 SEMIVOLATILE ANALYSIS COMMENTS :

LOW LEVEL SOIL :

The samples were extracted and analyzed within the CLP SOW holding times.

Sample B09327 had a Terphenyl-d14 surrogate recovery slightly above the QC limits. Sample B09326MSD had matrix spike recoveries for Phenol and 2,4-Dinitrotoluene that were slightly above the QC limits. In accordance with CLP protocol, no further action was required.

Pyrene was detected in sample B09327 at a concentration below the CRQL.

All of the other QC results were within the limits specified by the EPA CLP SOW.

3.2.3 EXTRACTABLE HYDROCARBONS "KEROSENE RANGE" COMMENTS :

SEQUENCE NOTES :

The sequence was started on 09/16/93 and was analyzed according to the SW-846 Method 3015M. The initial calibration consisted of 5 different levels of the Kerosene standard that ranged from 200ppm to 2000ppm. The continuing calibration at the 1000ppm level was injected amongst a series of samples, in order to verify the instrument stability. The %RSD in the initial calibration and the %D in the continuing calibration were below their 20% and 15% limits, respectively.

SAMPLE NOTES :

LOW LEVEL SOIL :

The samples were extracted and analyzed for extractable hydrocarbons in the Kerosene range within the required holding times. Approximately 20 g of each sample was extracted and concentrated to 5 mL.

There were no hydrocarbons in the Kerosene range detected in any of the samples. Sample B09330 was spiked with Kerosene and the matrix spike recoveries were between 81% and 84%. A blank spike was prepared at the same time, and had an 86% recovery.

All of the QC results were within the limits specified by the SW-846 Method 8015M.

1. DATA PACKAGE COMPLETENESS AND CASE NARRATIVE

Is technical verification documentation present? . . . . . (Yes) No N/A

Is a case narrative present? . . . . . (Yes) No N/A

Comments:

2. HOLDING TIMES

Are sample holding times acceptable? . . . . . (Yes) No N/A

Comments:

033

GC/MS ORGANIC DATA VALIDATION CHECKLIST

3. INSTRUMENT TUNING AND CALIBRATION

Is the GC/MS tuning/performance check acceptable? . . . . . Yes No N/A

Are initial calibrations acceptable? . . . . . Yes No N/A

Are continuing calibrations acceptable? . . . . . Yes No N/A

Comments:

4. BLANKS

Were laboratory blanks analyzed? . . . . . Yes No N/A

Are laboratory blank results acceptable? . . . . . Yes No N/A

Were field/trip blanks analyzed? . . . . . Yes No N/A

Are field/trip blank results acceptable? . . . . . Yes No N/A

Comments: See comments on last page of checklist.

5. ACCURACY

Were surrogates/System Monitoring Compounds analyzed? . . . . . Yes No N/A

Are surrogate/System Monitoring Compound recoveries acceptable? Yes No N/A

Were MS/MSD samples analyzed? . . . . . Yes No N/A

Are MS/MSD results acceptable? . . . . . Yes No N/A

Comments:

GC/MS ORGANIC DATA VALIDATION CHECKLIST

6. PRECISION

Are MS/MSD RPD values acceptable? . . . . . Yes No N/A

Are field duplicate RPD values acceptable? . . . . . Yes No N/A

Are field split RPD values acceptable? . . . . . Yes No N/A

Comments:

7. SYSTEM PERFORMANCE

Were internal standards analyzed? . . . . . Yes No N/A

Are internal standard areas acceptable? . . . . . Yes No N/A

Are internal standard retention times acceptable? . . . . . Yes No N/A

Comments:

8. COMPOUND IDENTIFICATION AND QUANTITATION

Is compound identification acceptable? . . . . . Yes No N/A

Is compound quantitation acceptable? . . . . . Yes No N/A

Comments:

9. REPORTED RESULTS AND QUANTITATION LIMITS

Are results reported for all requested analyses? . . . . . Yes No N/A

Are all results supported in the raw data? See comments . . . . . Yes No N/A

Do results meet the CRQLs? . . . . . Yes No N/A

Has the laboratory properly identified and coded all TIC? . . . Yes No N/A

Comments: Acetone was detected in sample B=9329 at 12 weeks. See attached raw data for verification.

035

GC/MS ORGANIC DATA VALIDATION CHECKLIST

Comments (attach additional sheets as necessary):

Methylene chloride and acetone were detected in the lab blank associated with samples B09325, B09326, and B09327.

Methylene chloride was detected in the lab blank associated with samples B09328, B09329, B09330, and B09331.

Sample B09331 was identified as a solid trap blank and contains acetone, toluene, and a TIC identified as an unknown hydrocarbon at R.T. 32.50 minutes.

RE: RADIOCHEMISTRY DATA VALIDATION SUMMARY FOR DATA PACKAGE B09325-TMA-620 (923-E418 620RAD.UP2)

INTRODUCTION

This memo presents the results of data validation on data package B09325-TMA-620 prepared by the TMA/Norcal laboratory under contract to Westinghouse/Hanford using WHC approved methods. Information concerning the samples validated along with the analyses reported and the methods of analysis is provided in the following table.

SAMPLE ID	SAMPLE DATE	MEDIA	ANALYSIS
B09325	9/7/93	SOIL	SEE NOTES
B09326	9/7/93	SOIL	
B09327	9/8/93	SOIL	
B09328	9/8/93	SOIL	
B09329	9/8/93	SOIL	
B09330	9/8/93	SOIL	

NOTES:

1. Indicates the samples were analyzed for gross alpha/beta, strontium-90, technetium-99 (beta counting), selenium-79 (liquid scintillation), isotopic plutonium, uranium, curium-244, americium-241, and neptunium-237 (alpha spectroscopy), total uranium (laser fluorometry), and selected radioisotopes by gamma spectroscopy.

2. All samples were 100% validated.

Data validation was conducted in accordance with the WHC statement of work (WHC 1993a) and validation procedures (WHC 1993b). Attachments 1 through 5 provide the following information as indicated below:

Attachment 1. Glossary of Data Reporting Qualifiers
Attachment 2. Summary of Data Qualifications
Attachment 3. Qualified Data Summary and Annotated Laboratory Reports
Attachment 4. Laboratory Narrative and Chain-of-Custody Documentation
Attachment 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

Precision. Goals for precision were met.

Accuracy. Goals for accuracy were met.

9413225.0386

Sample Result Verification. All sample results were supported in the raw data. However, sample results for total uranium and minimum detectable activities for neptunium-237 and iodine-129 could not be verified accurately by recalculation. No qualification was necessary since the sample results were supported in the raw data.

Detection Limits. Detection limit goals were acceptable for all sample results with the following exceptions.

SAMPLE ID	ANALYTE	MINIMUM DETECTABLE ACTIVITY REPORTED (pCi/g)	REQUIRED DETECTION LIMIT (pCi/g)
All Samples	Iron 59	ranged from 0.06 to 0.200	0.05
B09326	Cobalt 60	0.06	0.05
B09325	Cobalt-58	0.1	0.05
	Cobalt-60	0.1	0.05
	Europium-152	0.3	0.05
	Europium-154	0.2	0.05
	Europium-155	0.3	0.05

Completeness. The data package was complete for all requested analyses. A total of six samples were validated in this data package with a total of 210 determinations reported, of which 209 were deemed valid. This results in a completeness of 99.5 percent, which meets normal work plan data quality objectives of 90%.

MAJOR DEFICIENCIES

The following major deficiencies were identified during data validation which required qualification of data as unusable.

Continuing Calibration

- The calibration check analyzed after the sample analysis for technetium-99 on detector LBG-15 was unacceptable. Therefore the associated result for sample B09325 has been qualified as unusable (UR).

MINOR DEFICIENCIES

The following minor deficiencies were identified during data validation which required qualification of data.

Laboratory Blanks

- Technetium-99 was detected in the laboratory blank. Attachments 2 and 5 provide a summary of the samples affected, data qualification and supporting documentation.

Laboratory Control Sample

- Laboratory control sample analysis was not performed for selenium-79, therefore, results for all samples have been qualified as estimated (J for detects, UJ for non-detects).

DATA REPORTING

- Sample results reported as less than (L.T.) by the laboratory have been qualified as undetected (U) on the laboratory result forms (see Attachment 3).

- Secondary results reported by the laboratory have been crossed out, initialed and dated to clarify reported laboratory results (see Attachment 3).

GLOSSARY OF DATA REPORTING QUALIFIERS

9413225.0389

GLOSSARY OF RADIOCHEMISTRY DATA REPORTING QUALIFIERS

U - Indicates the constituent was analyzed for, but was not detected at a concentration above the minimum detectable activity (MDA). The concentration reported is the MDA corrected for sample aliquot size, dilution factors and percent solids (in the case of solid matrices) by the laboratory. The associated data should be considered usable for decision making purposes.

UJ - Indicates the constituent was analyzed for and was not detected at a concentration above the MDA. Due to a quality control deficiency identified during data validation, the concentration reported may not accurately reflect the sample MDA. The associated data should be considered usable for decision making purposes.

J - Indicates the constituent was analyzed for and detected. The concentration reported is qualified as estimated due to a quality control deficiency identified during data validation. The associated data should be considered usable for decision making purposes.

UR - Indicates the constituent was analyzed for and not detected. The concentration reported is qualified as unusable due to a quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

R - Indicates the constituent was analyzed for and detected. The concentration reported is qualified as unusable due to a quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

LABORATORY NARRATIVE and CHAIN-OF-CUSTODY DOCUMENTATION

9413225.0407

SDG: 7240
Contact: Dinkar Kharkar

TMA NORCAL
REPORTING GROUP 7240

Client: Westinghouse Hanford
Contract: MBH-SVV-069262

CASE NARRATIVE

1.0 GENERAL

TMA/Norcal Sample Delivery Group 7240 is comprised of the samples listed on the chain-of-custody documents below. This sample group was processed under the Westinghouse Hanford Company Statement of Work P.O. MBH-SVV-069262.

1.1 Chains-of-Custody
This report includes data for the six soil samples from location 200-UP-2, delivered under Field Log Book #EFL-1091. Chain-of-Custody numbers were not provided.

1.2 Sample Volume
One thousand mL plastic bottles containing the samples were received for the analyses. These were not adequate volumes to obtain the required detection limits for the gamma scan analyses.

1.3 Missing Samples
All samples listed under Field Log Book #EFL-1091 were received.

1.4 Holding Times
The samples were collected on September 7 and 8, 1993 and sample processing was initiated within 180 days of collection.

2.0 QUALITY CONTROL

The internal quality control consisted of one sample each of a laboratory control sample, a blank, and a replicate. All original analyses were performed with QC samples 7240-07 through 7240-09. Neptunium-237 analyses were performed with QC samples 7240-09 through 7240-11. Americium-241 and curium-244 analyses were performed with QC samples 7240-09, 12, 13, and 14.

The QC samples were prepared by the Quality Control Department. Copies of the QC notebook pages are included in this data package.

2.1 Laboratory Control Samples
The LCS recoveries for all nuclides were acceptable. The MDA's of the results for all analyses met the RDL's.

2.0 QUALITY CONTROL (cont'd)

2.2 Reagent Blanks

The MDA's of the results for all analyses met the RDL's except for neptunium-237 on sample 7240-008 due to a low chemical yield. The neptunium-237 result for blank 7240-011 was higher than the MDA, but well below the RDL. The negative results of gross beta and selenium-79 were underlined because they were less than the negative of their 2 σ counting error. The technetium-99 result for blank 7240-008 was higher than the MDA but well below the RDL.

2.3 Duplicates

Results were satisfactory for all duplicate analyses. The MDA's of gamma nuclides for the original of sample BO9325 were underlined because they were less than the negative of their 2 σ counting error. The 2 σ counting error for neptunium-237 for the duplicate of sample BO9325 was underlined because it was larger than both the MDA and the result implying that the MDA may not be a good estimate of the "real" minimum detectable activity.

3.0 ANALYSIS NOTES

3.1 Gross Alpha Analyses

The average MDA for gross alpha was (4 ± 1) pCi/g. Gross alpha activity above the MDA but below the RDL was found in all of the samples.

3.2 Gross Beta Analyses

The average MDA for gross beta was (5 ± 0) pCi/g. Gross beta activity above the RDL was found in all of the samples.

3.3 Selenium-79 Analyses

The average yield for nine analyses was (74 ± 35)%. The lowest yield was 44% and the highest was 96%. The average MDA was (2 ± 1) pCi/g. Selenium-79 activity above the RDL was not found in any of the samples.

3.4 Strontium-90 Analyses

The average yield for nine analyses was (84 ± 6)%. The lowest yield was 78% and the highest was 88%. The average MDA was (0.8 ± 0.2) pCi/g. Strontium-90 activity above the RDL was found in sample BO9325.

3.5 Technetium-99 Analyses

The average yield for nine analyses was (66 ± 9)%. The lowest yield was 59% and the highest was 71%. The average MDA was (0.2 ± 0.2) pCi/g. Technetium-99 activity above the RDL was not found in any of the samples.

Client: Westinghouse Hanford
Contract: MBH-SVV-069262

3.0 ANALYSIS NOTES (cont'd)

3.6 Iodine-129 Analyses
The average yield for nine analyses was (77 ± 19)%. The lowest yield was 65% and the highest was 93%. The average MDA was (2 ± 0.9) pCi/g. Iodine-129 activity above the RDL was not found in any of the samples.

3.7 Isotopic Uranium Analyses
The average yield for nine analyses was (74 ± 26)%. The lowest yield was 48% and the highest was 90%. The average MDA was (0.1 ± 0.1) pCi/g. Uranium-233/234 and uranium-238 activity above the RDL was found in all of the samples.

3.8 Total Uranium Analyses
The average MDA was (0.4 ± 0.2) μg/g. Uranium concentrations ranging from 1.4 to 2.0 μg/g were found in the samples.

3.9 Isotopic Plutonium Analyses
The average yield for nine analyses was (58 ± 27)%. The lowest yield was 30% and the highest was 74%. The average MDA was (0.02 ± 0.01) pCi/g. Plutonium-238 and plutonium-239/240 activity above the RDL's was not found in any of the samples.

3.10 Neptunium-237 Analyses
The average yield for eleven analyses was (31 ± 22)%. The lowest yield was 2% and the highest yield was 47%. The average MDA was (0.2 ± 0.7) pCi/g. Neptunium-237 activity above the RDL was not found in any of the samples.

3.11 Americium-241/Curium-244 Analyses
The average yield for eleven analyses was (73 ± 13)%. The lowest yield was 62% and the highest yield was 82%. The average MDA was (0.02 ± 0.02) pCi/g. Americium-241 and curium-244 activity above the RDL was not found in any of the samples.

3.12 Gamma Scan Analyses
A gamma scan analysis found cesium-137 in sample BO9325. The MDA of the results for iron-59 for all of the samples were higher than the RDL due to the short half-life of iron-59. Natural potassium-40, radium-226, radium-228, thorium-228, and thorium-232 activity was found in all of the samples.

SAMPLES/MATRIX					

9413225.0915

1. Completeness . . . . . ☐ N/A

Technical verification forms present? . . . . . (Yes) No N/A

Comments: Performed by WHC

2. Initial Calibration . . . . . ☐ N/A

Instruments/detectors calibrated within one year of sample analysis? . . . . . (Yes) No N/A

Initial calibration acceptable? . . . . . (Yes) No N/A

Standards NIST traceable? . . . . . (Yes) No N/A

Standards Expired? . . . . . Yes (No) N/A

Comments:

3. Continuing Calibration . . . . . ☐ N/A

Calibration checked within one week of sample analysis? . . . (Yes) No N/A
Calibration check acceptable? . . . . NOTE ① . . . . . ~~Yes~~ (No) N/A
Calibration check standards NIST traceable? . . . . . (Yes) No N/A
Calibration check standards expired? . . . . . Yes (No) N/A

Comments: ① LBG-15 for Tc-99 contin. calib. check is outside control limits for date of analysis. See Calibration check summary page for this detector. Sample BC9325 Tc-99 result qualified UR.

4. Blanks . . . . . ☐ N/A

Method blank analyzed? . . . . . (Yes) No N/A
Method blank results acceptable? . . . . . Yes (No) N/A
Analytes detected in method blank? ~~See note ①~~ . . . . . (Yes) No N/A
Field blank(s) analyzed? . . . Note ② . . . . . Yes (No) N/A
Field blank results acceptable? . . . . . Yes No (N/A)
Analytes detected in field blank(s)? . . . . . Yes No (N/A)
Transcription/Calculation Errors? . . . . . Yes (No) N/A

Comments: ① Tc-99 blank result = 0.15 pCi/g (MDA 0.1) Associated results < 5x blank and above MDA are qualified as estimated (J).
② Field QC is not identified in this sample set but sample identification has been requested. Field QC will be evaluated in the Final data summary.

5. Matrix Spikes . . . . . ☒ N/A

Matrix spike analyzed? . . . . . Yes No (N/A)
Spike recoveries acceptable? . . . . . Yes No (N/A)
Spike source traceable? . . . . . Yes No (N/A)
Spike source expired? . . . . . Yes No (N/A)
Transcription/Calculation Errors? . . . . . Yes No (N/A)

Comments:

6. Laboratory Control Samples . . . . . ☐ N/A

LCS analyzed? . . Note ① and ② . . . . . (Yes) No N/A
LCS recoveries acceptable? . . . . . (Yes) No N/A
LCS traceable? . . . . . (Yes) No N/A
Transcription/Calculation Errors? . . . . . Yes (No) N/A

Comments: ① Blank Spike is considered an LCS.
② LCS analysis not performed for Se-79, associated results are qualified as estimated (J/UJ).

7. Chemical Recovery . . . . . ☐ N/A

Chemical carrier added? . . . . . (Yes) No N/A
Chemical recovery acceptable? . . . . . (Yes) No N/A
Chemical carrier traceable? . . . . . (Yes) No N/A
Chemical carrier expired? . . . . . Yes (No) N/A
Transcription/Calculation errors? . . . . . Yes (No) N/A

Comments:

8. Duplicates . . . . . ☐ N/A

Duplicates Analyzed? . . . . . (Yes) No N/A
RPD Values Acceptable? . . . . . (Yes) No N/A
Transcription/Calculation Errors? . . . . . Yes (No) N/A

Comments:

9. Field QC Samples . . . . . ☒ N/A

Field duplicate sample(s) analyzed? . Note ① . . . . . Yes No (N/A)
Field duplicate RPD values acceptable? . . . . . Yes No (N/A)
Field split sample(s) analyzed? . . . . . Yes No (N/A)
Field split RPD values acceptable? . . . . . Yes No (N/A)
Performance audit sample(s) analyzed? . . . . . Yes No (N/A)
Performance audit sample results acceptable? . . . . . Yes No (N/A)

Comments: ① Field QC including duplicate and split field samples were not identified in this sample set, but it has been requested. Field QC will be evaluated in the final data summary.

10. Holding Times

Are sample holding times acceptable? . . . Note ① . . . (Yes) No N/A

Comments: ① See summary on comments page (A-5).

11. Results and Detection Limits (Levels D & E) . . . . . ☐ N/A

Results reported for all required sample analyses? . . . . . (Yes) No N/A
Results supported in raw data? . . . . . (Yes) No N/A
Results Acceptable? . . . . . (Yes) No N/A
Transcription/Calculation errors? . . . . . Yes (No) N/A
MDA's meet required detection limits? See Note ① and ③ . . Yes (No) N/A
Transcription/calculation errors? . See Note ② . . . . . (Yes) No N/A

Comments: ① Lab blank MDA for neptunium-237 is greater than the RDL. No qualification applies to sample results.
② Recalculation of many MDA's do not check out which may be due to laboratory substitution of calculated background statistics, however verification of reported MDA's with raw data is correct and complete.
③ See note ③ on comments page A-5.

Comments:

HOLDING TIME SUMMARY:

Sample ID	Collect Date	Grs α/β	Se79	Sr90	Tc99	I129	U	Pu	Np	Am	Cm	Total	Gamma
BC9325	9-7-93	✓	✓	✓	✓	✓	✓	✓	✓	97	97	✓	✓
BC9326	-7-	✓	✓	✓	✓	✓	✓	✓	✓	97	97	✓	✓
BC9327	9-8-93	✓	✓	✓	✓	✓	✓	✓	✓	96	96	✓	✓
BC9328	-8-	✓	✓	✓	✓	✓	✓	✓	✓	96	96	✓	✓
BC9329	-8-	✓	✓	✓	✓	✓	✓	✓	✓	96	96	✓	✓
BC9330	9-8-93	✓	✓	✓	✓	✓	✓	✓	✓	96	96	✓	✓

✓ - Indicates compliance within 180 days maximum holding time requirement. No qualification applied.

(3) Fe-59 MDA above RDL on all Samples. Co-60 ~~and is~~ MDA is above RDL for Samples BC9325 and BC9326, and Co-58, Europium-152, -154, and -155 ~~are above~~ MDA's are above the RDL on Sample BC9325 as indicated by underlined MDA values on laboratory report sheets. No qualifiers are applied.

RE: RADIOCHEMISTRY DATA VALIDATION SUMMARY FOR DATA PACKAGE B09325-TMA-620 (923-E418 620RAD.UP2)

INTRODUCTION

This memo presents the results of data validation on data package B09325-TMA-620 prepared by the TMA/Norcal laboratory under contract to Westinghouse/Hanford using WHC approved methods. Information concerning the samples validated along with the analyses reported and the methods of analysis is provided in the following table.

SAMPLE ID	SAMPLE DATE	MEDIA	ANALYSIS
B09325	9/7/93	SOIL	SEE NOTES
B09326	9/7/93	SOIL	
B09327	9/8/93	SOIL	
B09328	9/8/93	SOIL	
B09329	9/8/93	SOIL	
B09330	9/8/93	SOIL	

NOTES:

1. Indicates the samples were analyzed for gross alpha/beta, strontium-90, technetium-99 (beta counting), selenium-79 (liquid scintillation), isotopic plutonium, uranium, curium-244, americium-241, and neptunium-237 (alpha spectroscopy), total uranium (laser fluorometry), and selected radioisotopes by gamma spectroscopy.

2. All samples were 100% validated.

Data validation was conducted in accordance with the WHC statement of work (WHC 1993a) and validation procedures (WHC 1993b). Attachments 1 through 5 provide the following information as indicated below:

Attachment 1. Glossary of Data Reporting Qualifiers
Attachment 2. Summary of Data Qualifications
Attachment 3. Qualified Data Summary and Annotated Laboratory Reports
Attachment 4. Laboratory Narrative and Chain-of-Custody Documentation
Attachment 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

Precision. Goals for precision were met.

Accuracy. Goals for accuracy were met.

9413225.0427

Sample Result Verification. All sample results were supported in the raw data. However, sample results for total uranium and minimum detectable activities for neptunium-237 and iodine-129 could not be verified accurately by recalculation. No qualification was necessary since the sample results were supported in the raw data.

Detection Limits. Detection limit goals were acceptable for all sample results with the following exceptions.

SAMPLE ID	ANALYTE	MINIMUM DETECTABLE ACTIVITY REPORTED (pCi/g)	REQUIRED DETECTION LIMIT (pCi/g)
All Samples	Iron 59	ranged from 0.06 to 0.200	0.05
B09326	Cobalt 60	0.06	0.05
B09325	Cobalt-58	0.1	0.05
	Cobalt-60	0.1	0.05
	Europium-152	0.3	0.05
	Europium-154	0.2	0.05
	Europium-155	0.3	0.05

Completeness. The data package was complete for all requested analyses. A total of six samples were validated in this data package with a total of 210 determinations reported, of which 209 were deemed valid. This results in a completeness of 99.5 percent, which meets normal work plan data quality objectives of 90%.

MAJOR DEFICIENCIES

The following major deficiencies were identified during data validation which required qualification of data as unusable.

Continuing Calibration

- The calibration check analyzed after the sample analysis for technetium-99 on detector LBG-15 was unacceptable. Therefore the associated result for sample B09325 has been qualified as unusable (UR).

MINOR DEFICIENCIES

The following minor deficiencies were identified during data validation which required qualification of data.

Laboratory Blanks

- Technetium-99 was detected in the laboratory blank. Attachments 2 and 5 provide a summary of the samples affected, data qualification and supporting documentation.

9413225.0428

Laboratory Control Sample

- Laboratory control sample analysis was not performed for selenium-79, therefore, results for all samples have been qualified as estimated (J for detects, UJ for non-detects).

DATA REPORTING

- Sample results reported as less than (L.T.) by the laboratory have been qualified as undetected (U) on the laboratory result forms (see Attachment 3).

- Secondary results reported by the laboratory have been crossed out, initialed and dated to clarify reported laboratory results (see Attachment 3).

GLOSSARY OF DATA REPORTING QUALIFIERS

9413225.0430

GLOSSARY OF RADIOCHEMISTRY DATA REPORTING QUALIFIERS

U - Indicates the constituent was analyzed for, but was not detected at a concentration above the minimum detectable activity (MDA). The concentration reported is the MDA corrected for sample aliquot size, dilution factors and percent solids (in the case of solid matrices) by the laboratory. The associated data should be considered usable for decision making purposes.

UJ - Indicates the constituent was analyzed for and was not detected at a concentration above the MDA. Due to a quality control deficiency identified during data validation, the concentration reported may not accurately reflect the sample MDA. The associated data should be considered usable for decision making purposes.

J - Indicates the constituent was analyzed for and detected. The concentration reported is qualified as estimated due to a quality control deficiency identified during data validation. The associated data should be considered usable for decision making purposes.

UR - Indicates the constituent was analyzed for and not detected. The concentration reported is qualified as unusable due to a quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

R - Indicates the constituent was analyzed for and detected. The concentration reported is qualified as unusable due to a quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

LABORATORY NARRATIVE and CHAIN-OF-CUSTODY DOCUMENTATION

9413225.0448

SDG: 7240
Contact: Dinkar Kharkar

TMA NORCAL
REPORTING GROUP 7240

Client: Westinghouse Hanford
Contract: MBH-SVV-069262

CASE NARRATIVE

1.0 GENERAL

TMA/Norcal Sample Delivery Group 7240 is comprised of the samples listed on the chain-of-custody documents below. This sample group was processed under the Westinghouse Hanford Company Statement of Work P.O. MBH-SVV-069262.

1.1 Chains-of-Custody

This report includes data for the six soil samples from location 200-UP-2, delivered under Field Log Book #EFL-1091. Chain-of-Custody numbers were not provided.

1.2 Sample Volume

One thousand mL plastic bottles containing the samples were received for the analyses. These were not adequate volumes to obtain the required detection limits for the gamma scan analyses.

1.3 Missing Samples

All samples listed under Field Log Book #EFL-1091 were received.

1.4 Holding Times

The samples were collected on September 7 and 8, 1993 and sample processing was initiated within 180 days of collection.

2.0 QUALITY CONTROL

The internal quality control consisted of one sample each of a laboratory control sample, a blank, and a replicate. All original analyses were performed with QC samples 7240-07 through 7240-09. Neptunium-237 analyses were performed with QC samples 7240-09 through 7240-11. Americium-241 and curium-244 analyses were performed with QC samples 7240-09, 12, 13, and 14.

The QC samples were prepared by the Quality Control Department. Copies of the QC notebook pages are included in this data package.

2.1 Laboratory Control Samples

The LCS recoveries for all nuclides were acceptable. The MDA's of the results for all analyses met the RDL's.

3-2-94

2.0 QUALITY CONTROL (cont'd)

2.2 Reagent Blanks

The MDA's of the results for all analyses met the RDL's except for neptunium-237 on sample 7240-008 due to a low chemical yield. The neptunium-237 result for blank 7240-011 was higher than the MDA, but well below the RDL. The negative results of gross beta and selenium-79 were underlined because they were less than the negative of their 2 σ counting error. The technetium-99 result for blank 7240-008 was higher than the MDA but well below the RDL.

2.3 Duplicates

Results were satisfactory for all duplicate analyses. The MDA's of gamma nuclides for the original of sample BO9325 were underlined because they were less than the negative of their 2 σ counting error. The 2 σ counting error for neptunium-237 for the duplicate of sample BO9325 was underlined because it was larger than both the MDA and the result implying that the MDA may not be a good estimate of the "real" minimum detectable activity.

9413225.0450

3.0 ANALYSIS NOTES

3.1 Gross Alpha Analyses

The average MDA for gross alpha was (4 ± 1) pCi/g. Gross alpha activity above the MDA but below the RDL was found in all of the samples.

3.2 Gross Beta Analyses

The average MDA for gross beta was (5 ± 0) pCi/g. Gross beta activity above the RDL was found in all of the samples.

3.3 Selenium-79 Analyses

The average yield for nine analyses was (74 ± 35)%. The lowest yield was 44% and the highest was 96%. The average MDA was (2 ± 1) pCi/g. Selenium-79 activity above the RDL was not found in any of the samples.

3.4 Strontium-90 Analyses

The average yield for nine analyses was (84 ± 6)%. The lowest yield was 78% and the highest was 88%. The average MDA was (0.8 ± 0.2) pCi/g. Strontium-90 activity above the RDL was found in sample BO9325.

3.5 Technetium-99 Analyses

The average yield for nine analyses was (66 ± 9)%. The lowest yield was 59% and the highest was 71%. The average MDA was (0.2 ± 0.2) pCi/g. Technetium-99 activity above the RDL was not found in any of the samples.

TMA NORCAL

REPORTING GROUP 7240

Client: Westinghouse Hanford
Contract: MBH-SVV-069262

3.0 ANALYSIS NOTES (cont'd)

3.6 Iodine-129 Analyses

The average yield for nine analyses was (77 ± 19)%. The lowest yield was 65% and the highest was 93%. The average MDA was (2 ± 0.9) pCi/g. Iodine-129 activity above the RDL was not found in any of the samples.

3.7 Isotopic Uranium Analyses

The average yield for nine analyses was (74 ± 26)%. The lowest yield was 48% and the highest was 90%. The average MDA was (0.1 ± 0.1) pCi/g. Uranium-233/234 and uranium-238 activity above the RDL was found in all of the samples.

3.8 Total Uranium Analyses

The average MDA was (0.4 ± 0.2) μg/g. Uranium concentrations ranging from 1.4 to 2.0 μg/g were found in the samples.

3.9 Isotopic Plutonium Analyses

The average yield for nine analyses was (58 ± 27)%. The lowest yield was 30% and the highest was 74%. The average MDA was (0.02 ± 0.01) pCi/g. Plutonium-238 and plutonium-239/240 activity above the RDL's was not found in any of the samples.

3.10 Neptunium-237 Analyses

The average yield for eleven analyses was (31 ± 22)%. The lowest yield was 2% and the highest yield was 47%. The average MDA was (0.2 ± 0.7) pCi/g. Neptunium-237 activity above the RDL was not found in any of the samples.

3.11 Americium-241/Curium-244 Analyses

The average yield for eleven analyses was (73 ± 13)%. The lowest yield was 62% and the highest yield was 82%. The average MDA was (0.02 ± 0.02) pCi/g. Americium-241 and curium-244 activity above the RDL was not found in any of the samples.

3.12 Gamma Scan Analyses

A gamma scan analysis found cesium-137 in sample BO9325. The MDA of the results for iron-59 for all of the samples were higher than the RDL due to the short half-life of iron-59. Natural potassium-40, radium-226, radium-228, thorium-228, and thorium-232 activity was found in all of the samples.

Calibration check acceptable? . . . . NOTE ① . . . . . ~~Yes~~ No N/A
Calibration check standards NIST traceable? . . . . . Yes No N/A
Calibration check standards expired? . . . . . Yes No N/A

Comments: ① LBG-15 for Tc-99 contin. calib. check is outside control limits for date of analysis. See Calibration check summary page for this detector. Sample B09325 Tc-99 result qualified UR.

4. Blanks . . . . . ☐ N/A

Method blank analyzed? . . . . . Yes No N/A
Method blank results acceptable? . . . . . Yes No N/A
Analytes detected in method blank? See note ① . . . . . Yes No N/A
Field blank(s) analyzed? . . . Note ② . . . . . Yes No N/A
Field blank results acceptable? . . . . . Yes No N/A
Analytes detected in field blank(s)? . . . . . Yes No N/A
Transcription/Calculation Errors? . . . . . Yes No N/A

Comments: ① Tc-99 blank result = 0.15 pCi/g (MDA 0.1) Associated results < 5x blank and above MDA are qualified as estimated (J).
② Field QC is not identified in this sample set but sample identification has been requested. Field QC will be evaluated in the final data summary.

5. Matrix Spikes . . . . . ☒ N/A

Matrix spike analyzed? . . . . . Yes No N/A
Spike recoveries acceptable? . . . . . Yes No N/A
Spike source traceable? . . . . . Yes No N/A
Spike source expired? . . . . . Yes No N/A
Transcription/Calculation Errors? . . . . . Yes No N/A

Comments:

6. Laboratory Control Samples . . . . . ☐ N/A

LCS analyzed? . . Note ① and ② . . . . . Yes No N/A
LCS recoveries acceptable? . . . . . Yes No N/A
LCS traceable? . . . . . Yes No N/A
Transcription/Calculation Errors? . . . . . Yes No N/A

Comments: ① Blank Spike is considered an LCS.
② LCS analysis not performed for Se-79, associated results are qualified as estimated (J/UJ).

7. Chemical Recovery . . . . . ☐ N/A

Chemical carrier added? . . . . . Yes No N/A
Chemical recovery acceptable? . . . . . Yes No N/A
Chemical carrier traceable? . . . . . Yes No N/A
Chemical carrier expired? . . . . . Yes No N/A
Transcription/Calculation errors? . . . . . Yes No N/A

Comments:

8. Duplicates . . . . . ☐ N/A

Duplicates Analyzed? . . . . . Yes No N/A
RPD Values Acceptable? . . . . . Yes No N/A
Transcription/Calculation Errors? . . . . . Yes No N/A

Comments:

9413225.0456

9. Field QC Samples . . . . . ☒ N/A

Field duplicate sample(s) analyzed? . Note ① . . . . . Yes No (N/A)

Field duplicate RPD values acceptable? . . . . . Yes No (N/A)

Field split sample(s) analyzed? . . . . . Yes No (N/A)

Field split RPD values acceptable? . . . . . Yes No (N/A)

Performance audit sample(s) analyzed? . . . . . Yes No (N/A)

Performance audit sample results acceptable? . . . . . Yes No (N/A)

Comments: ① Field QC including duplicate and split field samples were not identified in this sample set, but it has been requested. Field QC will be evaluated in the final data summary.

10. Holding Times

Are sample holding times acceptable? . . . Note ① . . . (Yes) No N/A

Comments: ① See Summary on comments page (A-5).

11. Results and Detection Limits (Levels D & E) . . . . . ☐ N/A

Results reported for all required sample analyses? . . . . . (Yes) No N/A

Results supported in raw data? . . . . . (Yes) No N/A

Results Acceptable? . . . . See Note ④ on page A-5 . . (Yes) No N/A RS 4-20-94

Transcription/Calculation errors? . . . . . Yes (No) N/A

MDA's meet required detection limits? See Note ① and ③ . Yes (No) N/A

Transcription/calculation errors? . See Note ② . . . . . (Yes) No N/A

Comments: ① Lab blank MDA for neptunium-237 is greater than the RDL. No qualification applies to sample results.

② Recalculation of many MDA's do not check out which may be due to laboratory substitution of calculated background statistics, however verification of reported MDA's with raw data is correct and complete.

③ See note ③ on comments page A-5.

Revised RS 4-20-94

9413225.0459

Comments:

HOLDING TIME SUMMARY:

Sample ID	Collect Date	Grs α/β	Se79	Sr90	Tc99	I129	U	Pu	Np	Am	Cm	Total	Gamma
B09325	9-7-93	✓	✓	✓	✓	✓	✓	✓	✓	97	97	✓	✓
B09326	-7-	✓	✓	✓	✓	✓	✓	✓	✓	97	97	✓	✓
B09327	9-8-93	✓	✓	✓	✓	✓	✓	✓	✓	96	96	✓	✓
B09328	-8-	✓	✓	✓	✓	✓	✓	✓	✓	96	96	✓	✓
B09329	-8-	✓	✓	✓	✓	✓	✓	✓	✓	96	96	✓	✓
B09330	9-8-93	✓	✓	✓	✓	✓	✓	✓	✓	96	96	✓	✓

✓ - Indicates compliance within 180 days maximum holding time requirement. No qualification applied.

(3) Fe-59 MDA above RDL on all samples. Co-60 ~~and is~~ MDA is above RDL for samples B09325 and B09326, and Co-58, Europium-152, -154, and -155 ~~are above~~ MDA's are above the RDL on sample B09325 as indicated by underlined MDA values on laboratory report sheets. No qualifiers are applied. Gamma scan MDA's have been verified with the raw data. 4-20-94

(4) J and X qualifiers have been applied to selected analytes on Lab report form of all samples by the participating laboratory. These qualifiers are not consistent with DV procedures for radiochemistry and have been eliminated where appropriate.
