RE: GENERAL CHEMISTRY DATA VALIDATION SUMMARY FOR DATA PACKAGE B09355-TMA-615 (923-E418)

INTRODUCTION

This memorandum presents the results of data validation on data package B09355-TMA-615 prepared by Thermo Analytical Inc. (TMA). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

SAMPLE ID	SAMPLE DATE	MEDIA	ANALYSIS
B09355	09/20/93	SOIL	SEE NOTE 1
B09356	09/20/93	SOIL	
B09357	09/20/93	SOIL	
B09359	09/20/93	SOIL	
B09360	09/20/93	SOIL	
B09361	09/20/93	SOIL	
B09362	09/20/93	SOIL	

Notes: 1 All samples were analyzed for IC ions (Cl, F, SO4), and nitrate/nitrite.

Data validation was conducted in accordance with the WHC statement of work (WHC 1993a) and validation procedures (WHC 1993b). Attachments 1 through 5 provide the following information as indicated below:

Attachment 1. Glossary of Data Reporting Qualifiers
Attachment 2. Summary of Data Qualifications
Attachment 3. Qualified Data Summary and annotated Laboratory Reports
Attachment 4. Laboratory Narrative and Chain-of-Custody Documentation
Attachment 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

Precision. Goals for precision were met.

Accuracy. Goals for accuracy were met.

Sample Result Verification. All sample results were supported in the raw data.

Detection Limits. Detection limit goals were met for all sample results as specified in the referenced analytical method.

referenced analytical method.

Completeness. The data package was complete for all requested analyses. A total of seven (7) samples were validated in this data package with a total of 28 determinations reported, all of which were deemed valid. This results in a completeness of 100 percent which meets normal work plan objectives.

MAJOR DEFICIENCIES

No major deficiencies were identified during data validation which required qualification of data as unusable.

MINOR DEFICIENCIES

No minor deficiencies were identified during data validation which required qualification of data.

GLOSSARY OF DATA REPORTING QUALIFIERS

9413225.2407

GLOSSARY OF ORGANIC DATA REPORTING QUALIFIERS

B - Indicates the constituent was analyzed for and detected in the associated laboratory blank. This qualifier is applied by the laboratory. During the process of data validation this qualifier may be replaced by other appropriate qualifiers as defined by the validation procedures. The associated data should be considered usable for decision making purposes.

U - Indicates the constituent was analyzed for and not detected. The concentration reported is the sample quantitation limit corrected for aliquot size, dilution and percent solids (in the case of solid matrices) by the laboratory. The associated data should be considered usable for decision making purposes.

UJ - Indicates the constituent was analyzed for and not detected. Due to a minor quality control deficiency identified during data validation the concentration reported may not accurately reflect the sample quantitation limit. The associated data should be considered usable for decision making purposes.

J - Indicates the constituent was analyzed for and detected. This qualifier may be applied by the laboratory to indicate a concentration which is less than the contract required quantitation limit (CRQL) but greater than the instrument detection limit (IDL). During data validation this qualifier may be applied to indicate a minor quality control deficiency. However in either case, the associated data should be considered usable for decision making purposes.

NJ - Indicates presumptive evidence of a constituent at an estimated value. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

N - Indicates presumptive evidence of a constituent. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

JN - Indicates a tentativeiy identified compound (TIC) whose concentration and identification have been determined to be valid as a result of data validation. The associated data should be considered usable for decision making purposes.

UR - Indicates the constituent was analyzed for and not detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

R - Indicates the constituent was analyzed for and detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

This report is rendered upon all of the following conditions: Skinner & Sherman Laboratories, Inc., retains ownership of this report until associated submitted invoice is satisfied. Expert witness services shall be available in conjunction with this report only if prior notification of this potential requirement was made and accepted, before the analysis. Client will be responsible for Skinner & Sherman costs and consulting fees if our services are required by subpoena or otherwise in legal proceedings. Total liability is limited to the invoice amount. The results listed refer only to tested samples and applicable parameters. Results are not analyzed in accordance with New York State protocol unless indicated. Product endorsement is neither inferred nor implied. Skinner & Sherman Laboratories, Inc., will exercise due diligence but will not be responsible for lost or destroyed samples or evidence unless client makes appropriate insurance coverage arrangements. Samples are held for thirty days following issuance of report. Samples will be stored at client's expense, if authorized in writing.

CASE NARRATIVE

Sample B09355 (A3-09-078-01F) yielded a 76.0% recovery for the Fluoride analysis. The low Fluoride recovery compared to our laboratory control sample indicated the presence of a matrix interference.

No other problems were encountered during sample analysis. All QC results were acceptable.

RE: GENERAL CHEMISTRY DATA VALIDATION SUMMARY FOR DATA PACKAGE B09355-TMA-615 (923-E418)

INTRODUCTION

This memorandum presents the results of data validation on data package B09355-TMA-615 prepared by Thermo Analytical Inc. (TMA). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

SAMPLE ID	SAMPLE DATE	MEDIA	ANALYSIS
B09355	09/20/93	SOIL	SEE NOTE 1
B09356	09/20/93	SOIL	
B09357	09/20/93	SOIL	
B09359	09/20/93	SOIL	
B09360	09/20/93	SOIL	
B09361	09/20/93	SOIL	
B09362	09/20/93	SOIL	

Notes: 1 All samples were analyzed for IC ions (Cl, F, SO4), and nitrate/nitrite.

Data validation was conducted in accordance with the WHC statement of work (WHC 1993a) and validation procedures (WHC 1993b). Attachments 1 through 5 provide the following information as indicated below:

Attachment 1. Glossary of Data Reporting Qualifiers
Attachment 2. Summary of Data Qualifications
Attachment 3. Qualified Data Summary and annotated Laboratory Reports
Attachment 4. Laboratory Narrative and Chain-of-Custody Documentation
Attachment 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

Precision. Goals for precision were met.

Accuracy. Goals for accuracy were met.

Sample Result Verification. All sample results were supported in the raw data.

Detection Limits. Detection limit goals were met for all sample results as specified in the referenced analytical method.

referenced analytical method.

Completeness. The data package was complete for all requested analyses. A total of seven (7) samples were validated in this data package with a total of 28 determinations reported, all of which were deemed valid. This results in a completeness of 100 percent which meets normal work plan objectives.

MAJOR DEFICIENCIES

No major deficiencies were identified during data validation which required qualification of data as unusable.

MINOR DEFICIENCIES

No minor deficiencies were identified during data validation which required qualification of data.

GLOSSARY OF DATA REPORTING QUALIFIERS

9413275.2436

GLOSSARY OF ORGANIC DATA REPORTING QUALIFIERS

B - Indicates the constituent was analyzed for and detected in the associated laboratory blank. This qualifier is applied by the laboratory. During the process of data validation this qualifier may be replaced by other appropriate qualifiers as defined by the validation procedures. The associated data should be considered usable for decision making purposes.

U - Indicates the constituent was analyzed for and not detected. The concentration reported is the sample quantitation limit corrected for aliquot size, dilution and percent solids (in the case of solid matrices) by the laboratory. The associated data should be considered usable for decision making purposes.

UJ - Indicates the constituent was analyzed for and not detected. Due to a minor quality control deficiency identified during data validation the concentration reported may not accurately reflect the sample quantitation limit. The associated data should be considered usable for decision making purposes.

J - Indicates the constituent was analyzed for and detected. This qualifier may be applied by the laboratory to indicate a concentration which is less than the contract required quantitation limit (CRQL) but greater than the instrument detection limit (IDL). During data validation this qualifier may be applied to indicate a minor quality control deficiency. However in either case, the associated data should be considered usable for decision making purposes.

NJ - Indicates presumptive evidence of a constituent at an estimated value. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

N - Indicates presumptive evidence of a constituent. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

JN - Indicates a tentatively identified compound (TIC) whose concentration and identification have been determined to be valid as a result of data validation. The associated data should be considered usable for decision making purposes.

UR - Indicates the constituent was analyzed for and not detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

R - Indicates the constituent was analyzed for and detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

CASE NARRATIVE

Sample B09355 (A3-09-078-01F) yielded a 76.0% recovery for the Fluoride analysis. The low Fluoride recovery compared to our laboratory control sample indicated the presence of a matrix interference.

No other problems were encountered during sample analysis. All QC results were acceptable.

FR: Michael Higgins, Golder Associates Inc.

RE: GENERAL GC DATA VALIDATION SUMMARY FOR DATA PACKAGE B09355-TMA-615 (923-E418)

INTRODUCTION

This memorandum presents the results of data validation on data package B09355-TMA-615 prepared by Thermo Analytical Inc. (TMA). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

SAMPLE ID	SAMPLE DATE	MEDIA	ANALYSIS
B09355	09/20/93	SOIL	SEE NOTE 1
B09356	09/20/93	SOIL	
B09357	09/20/93	SOIL	
B09359	09/20/93	SOIL	
B09360	09/20/93	SOIL	
B09361	09/20/93	SOIL	
B09362	09/20/93	SOIL	

Notes: 1 All samples were analyzed for extractable fuel hydrocarbons (kerosene range).

Data validation was conducted in accordance with the WHC statement of work (WHC 1993a) and validation procedures (WHC 1993b). Attachments 1 through 5 provide the following information as indicated below:

Attachment 1. Glossary of Data Reporting Qualifiers
Attachment 2. Summary of Data Qualifications
Attachment 3. Qualified Data Summary and annotated Laboratory Reports
Attachment 4. Laboratory Narrative and Chain-of-Custody Documentation
Attachment 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

Precision. Goals for precision were met.

Accuracy. Goals for accuracy were met.

Sample Result Verification. All sample results were supported in the raw data.

Detection Limits. Detection limit goals were met for all sample results as specified in the referenced analytical method.

Completeness. The data package was complete for all requested analyses. A total of seven (7) samples were validated in this data package with a total of 7 determinations reported, all of which were deemed valid. This results in a completeness of 100 percent which meets normal work plan objectives.

MAJOR DEFICIENCIES

No major deficiencies were identified during data validation which required qualification of data as unusable.

MINOR DEFICIENCIES

No minor deficiencies were identified during data validation which required qualification of data.

GLOSSARY OF DATA REPORTING QUALIFIERS

9417225.2465

GLOSSARY OF ORGANIC DATA REPORTING QUALIFIERS

B - Indicates the constituent was analyzed for and detected in the associated laboratory blank. This qualifier is applied by the laboratory. During the process of data validation this qualifier may be replaced by other appropriate qualifiers as defined by the validation procedures. The associated data should be considered usable for decision making purposes.

U - Indicates the constituent was analyzed for and not detected. The concentration reported is the sample quantitation limit corrected for aliquot size, dilution and percent solids (in the case of solid matrices) by the laboratory. The associated data should be considered usable for decision making purposes.

UJ - Indicates the constituent was analyzed for and not detected. Due to a minor quality control deficiency identified during data validation the concentration reported may not accurately reflect the sample quantitation limit. The associated data should be considered usable for decision making purposes.

J - Indicates the constituent was analyzed for and detected. This qualifier may be applied by the laboratory to indicate a concentration which is less than the contract required quantitation limit (CRQL) but greater than the instrument detection limit (IDL). During data validation this qualifier may be applied to indicate a minor quality control deficiency. However in either case, the associated data should be considered usable for decision making purposes.

NJ - Indicates presumptive evidence of a constituent at an estimated value. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

N - Indicates presumptive evidence of a constituent. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

JN - Indicates a tentatively identified compound (TIC) whose concentration and identification have been determined to be valid as a result of data validation. The associated data should be considered usable for decision making purposes.

UR - Indicates the constituent was analyzed for and not detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

R - Indicates the constituent was analyzed for and detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

LABORATORY NARRATIVE AND CHAIN-OF-CUSTODY DOCUMENTATION

SW3225.2479

CASE NARRATIVE

LABORATORY : TMA/ARLI

CASE : 09-078

CONTRACT ID : WESTINGHOUSE HANFORD COMPANY

SDG RECEIPT DATE : September 27, 1993

1.0 DESCRIPTION OF CASE :

Eight soil samples were analyzed for TCL Organics- Volatiles and Semivolatiles according to the USEPA Contract Laboratory Program (CLP) Statement of Work for Organic Analysis, Revision OLM01.8. The Total Petroleum Hydrocarbons in the Kerosene range (K) were analyzed according to the SW-846 Method 8015M.

2.0 SAMPLE LIST :

3.0 COMMENTS :

3.1 SHIPPING AND DOCUMENTATION :

A 250 mL Volatile container for sample B09361 was broken at TMA/ARLI. As per WHC ROD-93-0215, TMA/ARLI was instructed to use the Kerosene aliquot of that sample for the Volatile analysis. Both Kerosene and Semivolatiles will be analyzed for by utilizing the 250 mL bottle designated for the Semivolatiles analysis.

All of the other sample containers were received intact and properly documented.

3.2 ANALYSIS

3.2.1 VOLATILE ANALYSIS COMMENTS :

LOW LEVEL SOIL :

The samples were analyzed by heated purge within the CLP SOW holding times.

All of the QC results were within the limits specified by the EPA CLP SOW.

TUNES :

All BFB tunes were injected directly into the GC/MS instrument.

3.2.2 SEMIVOLATILE ANALYSIS COMMENTS :

LOW LEVEL SOIL :

The samples were extracted and analyzed within the contract required holding times.

No TCL analytes were detected in the samples, with the exception of trace amounts of Di-n-butylphthalate ranging from 290 to 410 ppb.

All of the QC results were within the limits specified by the EPA CLP SOW.

3.2.3 TOTAL PETROLEUM HYDROCARBONS "KEROSENE RANGE" COMMENTS :

SEQUENCE NOTES :

The sequence was started on 10/05/93 and was analyzed according to the SW-846 Method 8015M. The initial calibration consisted of 5 different levels of the Kerosene standard that ranged from 200ppm to 2000ppm. The continuing calibration at the 1000ppm level was injected amongst a series of samples, in

order to verify the instrument stability. The %RSD in the initial calibration and the %D in the continuing calibration were below their 20% and 15% limits, respectively.

SAMPLE NOTES :

LOW LEVEL SOIL :

The samples were extracted and analyzed within the SW-846 holding time. Approximately 20g of each sample was extracted and concentrated to a final volume of 5 mL. The samples were then analyzed by GC/FID for total petroleum hydrocarbons in the Kerosene range by Method 8015M. There were no total petroleum hydrocarbons detected in the samples.

Sample B09357 was spiked with approximately 245 ug/Kg of Kerosene. The spike recoveries were between 90% and 92%, whereas the blank spike had a recovery of 82%.

All of the QC results were within the limits specified by the SW-846 Method 8015M.

9413225.2482

We certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data in this hardcopy data package and in the computer-readable data submitted on diskette is authorized by the Laboratory Manager or his designee, as verified by the following signatures.

DATA VALIDATION SUPPORTING DOCUMENTATION

9413227.2486

GENERAL GC DATA VALIDATION CHECKLIST

3. INSTRUMENT CALIBRATION

3.1 INITIAL CALIBRATION

Was an initial calibration performed? . . . . . Yes No N/A

Are %RSD values for calibration or response factors acceptable? . . . . . Yes No N/A

Comments: _____

3.2 CONTINUING CALIBRATION

Was a continuing calibration check performed? . . . . . Yes No N/A

Are %D values for calibration or response factors acceptable? . Yes No N/A

Comments: _____

4. BLANKS

Were laboratory blanks analyzed? . . . . . Yes No N/A

Are laboratory blank results acceptable? . . . . . Yes No N/A

Were field/trip blanks analyzed? . . . . . Yes No N/A

Are field/trip blank results acceptable? . . . . . Yes No N/A

Comments: _____

5. ACCURACY

Were surrogates analyzed? . . . . . Yes No N/A

Are surrogate recoveries acceptable? . . . . . Yes No N/A

Were MS/MSD samples analyzed? . . . . . Yes No N/A

Are MS/MSD recoveries acceptable? . . . . . Yes No N/A

Were LCS samples analyzed? . . . . . Yes No N/A

Are LCS recoveries acceptable? . . . . . Yes No N/A

9413225.2487

GENERAL GC DATA VALIDATION CHECKLIST

Comments: Surrogate should be analyzed using this method. HOWEVER qualification per Section 6.6.1 was not performed and data was not qualified because ① LCS was performed and acceptable ② Matrix Spike (in Duplicate) was performed and acceptable (although criteria was not provided by the laboratory)

6. PRECISION

Are MS/MSD sample RPD values acceptable? . . . . . Yes No N/A

Are field duplicate RPD values acceptable? . . . . . Yes No N/A

Are field split RPD values acceptable? . . . . . Yes No N/A

Comments: RPD was on order 1%, However no criteria (control limits) was provided by the laboratory for evaluation. 2/14/94 No qualification of the data was made.

9413225.2489

7. COMPOUND IDENTIFICATION AND QUANTITATION

Is compound identification acceptable? . . . . . Yes No N/A

Is compound quantitation acceptable? . . . . . Yes No N/A

Comments:

8. REPORTED RESULTS AND DETECTION LIMITS

Are results reported for all requested analyses? . . . . . Yes No N/A

Are all results supported in the raw data? . . . . . Yes No N/A

Do results meet the CRQLs? . . . . . Yes No N/A

Comments:

RE: METALS AND CYANIDE DATA VALIDATION SUMMARY FOR DATA PACKAGE B09355-TMA-615 (923-E418)

INTRODUCTION

This memorandum presents the results of data validation on data package B09355-TMA-615 prepared by Thermo Analytical Inc. (TMA). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

SAMPLE ID	SAMPLE DATE	MEDIA	ANALYSIS
B09355	09/20/93	SOIL	SEE NOTE 1
B09356	09/20/93	SOIL	
B09357	09/20/93	SOIL	
B09359	09/20/93	SOIL	
B09360	09/20/93	SOIL	
B09361	09/20/93	SOIL	
B09362	09/20/93	SOIL	

Notes: 1 All samples were analyzed for Target Analyte List (TAL) metals and cyanide, and titanium.

Data validation was conducted in accordance with the WHC statement of work (WHC 1993a) and validation procedures (WHC 1993b). Attachments 1 through 5 provide the following information as indicated below:

Attachment 1. Glossary of Data Reporting Qualifiers
Attachment 2. Summary of Data Qualifications
Attachment 3. Qualified Data Summary and annotated Laboratory Reports
Attachment 4. Laboratory Narrative and Chain-of-Custody Documentation
Attachment 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

Precision. Goals for precision were met.

Accuracy. Goals for accuracy were met with the exception of the deficiencies identified below.

Sample Result Verification. All sample results were supported in the raw data.

Detection Limits. Detection limit goals were met for all sample results as specified in the referenced analytical method.

Completeness. The data package was complete for all requested analyses. A total of seven (7) samples were validated in this data package with a total of 105 determinations reported, all of which were deemed valid. This results in a completeness of 100 percent which meets normal work plan objectives.

MAJOR DEFICIENCIES

No major deficiencies were identified during data validation which required qualification of data as unusable.

MINOR DEFICIENCIES

The following minor deficiencies were identified during data validation which required qualification of data.

Laboratory blanks

Positive Blanks. Positive analytes were detected in the calibration blanks. Attachment 2 provides a summary of the samples and data qualification applied.

Negative Blanks. No negative results were reported for the calibration or preparation blanks.

Spike Sample Recovery

- Spike sample recoveries was unacceptable for antimony. Attachment 2 provides a summary of the samples and data qualifications applied.

ATTACHMENT 1

GLOSSARY OF DATA REPORTING QUALIFIERS

9411325.2493

GLOSSARY OF ORGANIC DATA REPORTING QUALIFIERS

B - Indicates the constituent was analyzed for and detected in the associated laboratory blank. This qualifier is applied by the laboratory. During the process of data validation this qualifier may be replaced by other appropriate qualifiers as defined by the validation procedures. The associated data should be considered usable for decision making purposes.

U - Indicates the constituent was analyzed for and not detected. The concentration reported is the sample quantitation limit corrected for aliquot size, dilution and percent solids (in the case of solid matrices) by the laboratory. The associated data should be considered usable for decision making purposes.

UJ - Indicates the constituent was analyzed for and not detected. Due to a minor quality control deficiency identified during data validation the concentration reported may not accurately reflect the sample quantitation limit. The associated data should be considered usable for decision making purposes.

J - Indicates the constituent was analyzed for and detected. This qualifier may be applied by the laboratory to indicate a concentration which is less than the contract required quantitation limit (CRQL) but greater than the instrument detection limit (IDL). During data validation this qualifier may be applied to indicate a minor quality control deficiency. However in either case, the associated data should be considered usable for decision making purposes.

NJ - Indicates presumptive evidence of a constituent at an estimated value. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

N - Indicates presumptive evidence of a constituent. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

JN - Indicates a tentatively identified compound (TIC) whose concentration and identification have been determined to be valid as a result of data validation. The associated data should be considered usable for decision making purposes.

UR - Indicates the constituent was analyzed for and not detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

R - Indicates the constituent was analyzed for and detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

Quality Control Narrative

Scope
Seven (7) soil samples were submitted to TMA/Skinner & Sherman Laboratories, Inc. on September 28, 1993 from TMA/Norcal. The samples were analyzed for the USEPA CLP Target Analyte List metals, titanium, and cyanide. The analyses were performed under TMA/Skinner and Sherman work order S309245.

Methodology
The samples were prepared, analyzed and reported in accordance with the USEPA Contract Laboratory Program Statement of Work ILM02.

Discussion
All quality control requirements were met for the samples with the following exceptions;

The digestion spike recovery for antimony exceeded control limit requirements.

The laboratory duplicate exceeded control limit requirements for lead.

Please feel free to call if there are any questions concerning this package.

Respectfully submitted,

TMA/SKINNER & SHERMAN LABORATORIES, INC.

1. DATA PACKAGE COMPLETENESS AND CASE NARRATIVE

Is technical verification documentation present? . . . . . (Yes) No N/A

Is a case narrative present? . . . . . (Yes) No N/A

Comments:

2. HOLDING TIMES

Are sample holding times acceptable? . . . . . (Yes) No N/A

Comments: Preparation log (form XIII) indicated Hg was prepared 10/12/93, Run log (form XIV) indicated Hg was analyzed on 10/16/93. Inconsistent but not qualified. Bench showed original prep @ 10/12/93 changed to 10/16/93 at latter date. Believe that form XIV date was taken from original bench and incorrect date.

023

INORGANIC ANALYSIS DATA VALIDATION CHECKLIST

3. INSTRUMENT PERFORMANCE AND CALIBRATIONS

Were initial calibrations performed on all instruments? . . . . (Yes) No N/A
Are initial calibrations acceptable? . . . . . (Yes) No N/A
Are ICP interference checks acceptable? . . . . . (Yes) No N/A
Were ICV and CCV checks performed on all instruments? . . . . . (Yes) No N/A
Are ICV and CCV checks acceptable? . . . . . (Yes) No N/A
Comments:

4. BLANKS

Were ICB and CCB checks performed for all applicable analyses? (Yes) No N/A
Are ICB and CCB results acceptable? . . . . . Yes (No) N/A
Were preparation blanks analyzed? . . . . . (Yes) No N/A
Are preparation blank results acceptable? . . . . . Yes (No) N/A
Were field/trip blanks analyzed? . . . . . Yes No (N/A)
Are field/trip blank results acceptable? . . . . . Yes No (N/A)
Comments: Minor qualifications (B→U) for blank contamination.

5. ACCURACY

Were spike samples analyzed? . . . . . (Yes) No N/A
Are spike sample recoveries acceptable? . . . . . Yes (No) N/A
Were laboratory control samples (LCS) analyzed? . . . . . (Yes) No N/A
Are LCS recoveries acceptable? . . . . . 5/21/94 Yes (No) N/A
Comments: Spike Recovery for Antimony = 47.5%, Post Digest = 99%
~~LCS Recovery for Antimony = 76.6%~~ → no qual. for SB based on DW procedure 5/21/94
~~Spike Recovery for~~ Spike Recovery for Titanium was ~~5x~~ 4x out, but sample was > ~~5x~~ 4x spike level.
5/21/94

024

INORGANIC ANALYSIS DATA VALIDATION CHECKLIST

6. PRECISION

Were laboratory duplicates analyzed? . . . . . Yes No N/A
Are laboratory duplicate samples RPD values acceptable? . . . . Yes No N/A
Were ICP serial dilution samples analyzed? . . . . . Yes No N/A
Are ICP serial dilution %D values acceptable? . . . . . Yes No N/A
Are field duplicate RPD values acceptable? . . . . . Yes No N/A
Are field split RPD values acceptable? . . . . . Yes No N/A

Comments: LEAD RESULT WAS FLAGGED OUTSIDE CRITERIA BY THE LABORATORY, HOWEVER THE RESULTS WERE < 5CRQL + < 2X CRQL RPD LIMIT, NO QUALIFICATION.

7. FURNACE AA QUALITY CONTROL

Were duplicate injections performed as required? . . . . . Yes No N/A
Are duplicate injection %RSD values acceptable? . . . . . Yes No N/A
Were analytical spikes performed as required? . . . . . Yes No N/A
Are analytical spike recoveries acceptable? . . . . . Yes No N/A
Was MSA performed as required? . . . . . Yes No N/A
Are MSA results acceptable? . . . . . Yes No N/A

Comments:

8. REPORTED RESULTS AND DETECTION LIMITS

Are results reported for all requested analyses? . . . . . Yes No N/A
Are all results supported in the raw data? . . . . . Yes No N/A
Are results calculated properly? . . . . . Yes No N/A
Do results meet the CRDLs? . . . . . Yes No N/A

RE: METALS AND CYANIDE DATA VALIDATION SUMMARY FOR DATA PACKAGE B09355-TMA-615 (923-E418)

INTRODUCTION

This memorandum presents the results of data validation on data package B09355-TMA-615 prepared by Thermo Analytical Inc. (TMA). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

SAMPLE ID	SAMPLE DATE	MEDIA	ANALYSIS
B09355	09/20/93	SOIL	SEE NOTE 1
B09356	09/20/93	SOIL	
B09357	09/20/93	SOIL	
B09359	09/20/93	SOIL	
B09360	09/20/93	SOIL	
B09361	09/20/93	SOIL	
B09362	09/20/93	SOIL	

Notes: 1 All samples were analyzed for Target Analyte List (TAL) metals and cyanide, and titanium.

Data validation was conducted in accordance with the WHC statement of work (WHC 1993a) and validation procedures (WHC 1993b). Attachments 1 through 5 provide the following information as indicated below:

Attachment 1. Glossary of Data Reporting Qualifiers
Attachment 2. Summary of Data Qualifications
Attachment 3. Qualified Data Summary and annotated Laboratory Reports
Attachment 4. Laboratory Narrative and Chain-of-Custody Documentation
Attachment 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

Precision. Goals for precision were met.

Accuracy. Goals for accuracy were met with the exception of the deficiencies identified below.

Sample Result Verification. All sample results were supported in the raw data.

Detection Limits. Detection limit goals were met for all sample results as specified in the referenced analytical method.

Completeness. The data package was complete for all requested analyses. A total of seven (7) samples were validated in this data package with a total of 105 determinations reported, all of which were deemed valid. This results in a completeness of 100 percent which meets normal work plan objectives.

MAJOR DEFICIENCIES

No major deficiencies were identified during data validation which required qualification of data as unusable.

MINOR DEFICIENCIES

The following minor deficiencies were identified during data validation which required qualification of data.

Laboratory blanks

Positive Blanks. Positive analytes were detected in the calibration blanks. Attachment 2 provides a summary of the samples and data qualification applied.

Negative Blanks. No negative results were reported for the calibration or preparation blanks.

Spike Sample Recovery

- Spike sample recoveries was unacceptable for antimony. Attachment 2 provides a summary of the samples and data qualifications applied.

GLOSSARY OF DATA REPORTING QUALIFIERS

9W322E.2523

GLOSSARY OF ORGANIC DATA REPORTING QUALIFIERS

B - Indicates the constituent was analyzed for and detected in the associated laboratory blank. This qualifier is applied by the laboratory. During the process of data validation this qualifier may be replaced by other appropriate qualifiers as defined by the validation procedures. The associated data should be considered usable for decision making purposes.

U - Indicates the constituent was analyzed for and not detected. The concentration reported is the sample quantitation limit corrected for aliquot size, dilution and percent solids (in the case of solid matrices) by the laboratory. The associated data should be considered usable for decision making purposes.

UJ - Indicates the constituent was analyzed for and not detected. Due to a minor quality control deficiency identified during data validation the concentration reported may not accurately reflect the sample quantitation limit. The associated data should be considered usable for decision making purposes.

J - Indicates the constituent was analyzed for and detected. This qualifier may be applied by the laboratory to indicate a concentration which is less than the contract required quantitation limit (CRQL) but greater than the instrument detection limit (IDL). During data validation this qualifier may be applied to indicate a minor quality control deficiency. However in either case, the associated data should be considered usable for decision making purposes.

NJ - Indicates presumptive evidence of a constituent at an estimated value. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

N - Indicates presumptive evidence of a constituent. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

JN - Indicates a tentatively identified compound (TIC) whose concentration and identification have been determined to be valid as a result of data validation. The associated data should be considered usable for decision making purposes.

UR - Indicates the constituent was analyzed for and not detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

R - Indicates the constituent was analyzed for and detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

Quality Control Narrative

9W225.2536

Scope
Seven (7) soil samples were submitted to TMA/Skinner & Sherman Laboratories, Inc. on September 28, 1993 from TMA/Norcal. The samples were analyzed for the USEPA CLP Target Analyte List metals, titanium, and cyanide. The analyses were performed under TMA/Skinner and Sherman work order S309245.

Methodology
The samples were prepared, analyzed and reported in accordance with the USEPA Contract Laboratory Program Statement of Work ILM02.

Discussion
All quality control requirements were met for the samples with the following exceptions;

The digestion spike recovery for antimony exceeded control limit requirements.

The laboratory duplicate exceeded control limit requirements for lead.

Please feel free to call if there are any questions concerning this package.

Respectfully submitted,

TMA/SKINNER & SHERMAN LABORATORIES, INC.

INORGANIC ANALYSIS DATA VALIDATION CHECKLIST

VALIDATION LEVEL:	A	B	C	D	E

PROJECT: 200-UP-2		DATA PACKAGE: B09355-TMA-0615
VALIDATOR: M. HIGGINS	LAB: TMA	DATE: FEB. 11, 1994
CASE: N3-09-137SAS		SDG: B09355

ANALYSES PERFORMED

☒ CLP/ICP	☐ CLP/GFAA	☒ CLP/Hg	☒ CLP/Cyanide	☒ titanium	☐
☐ SW-846/ICP	☐ SW-846/GFAA	☐ SW-846/Hg	☐ SW-846 Cyanide	☐	☐

SAMPLES/MATRIX 7/SOIL	
B09355	B09361
B09356	B09362
B09357	
B09359	
B09360	

1. DATA PACKAGE COMPLETENESS AND CASE NARRATIVE

Is technical verification documentation present? . . . . . (Yes) No N/A

Is a case narrative present? . . . . . (Yes) No N/A

Comments:

2. HOLDING TIMES

Are sample holding times acceptable? . . . . . (Yes) No N/A

Comments: Preparation log (form XIII) indicated Hg was prepared 10/18/93, Run log (form XIV) indicated Hg was analyzed on 10/16/93. INCONSISTENT BUT NOT QUALIFIED Bench showed original prep @ 10/18/93 changed to 10/16/93 at latter date, believe that form XIV date ~~is~~ was taken from orginal bench and incorrect date.

023

INORGANIC ANALYSIS DATA VALIDATION CHECKLIST

3. INSTRUMENT PERFORMANCE AND CALIBRATIONS

Were initial calibrations performed on all instruments? . . . . (Yes) No N/A
Are initial calibrations acceptable? . . . . . (Yes) No N/A
Are ICP interference checks acceptable? . . . . . (Yes) No N/A
Were ICV and CCV checks performed on all instruments? . . . . . (Yes) No N/A
Are ICV and CCV checks acceptable? . . . . . (Yes) No N/A
Comments:

4. BLANKS

Were ICB and CCB checks performed for all applicable analyses? (Yes) No N/A
Are ICB and CCB results acceptable? . . . . . Yes (No) N/A
Were preparation blanks analyzed? . . . . . (Yes) No N/A
Are preparation blank results acceptable? . . . . . Yes (No) N/A
Were field/trip blanks analyzed? . . . . . Yes No (N/A)
Are field/trip blank results acceptable? . . . . . Yes No (N/A)
Comments: Minor qualifications (B→U) for blank contamination.

5. ACCURACY

Were spike samples analyzed? . . . . . (Yes) No N/A
Are spike sample recoveries acceptable? . . . . . Yes (No) N/A
Were laboratory control samples (LCS) analyzed? . . . . . (Yes) No N/A
Are LCS recoveries acceptable? . . . . . 5/21/94 Yes (No) N/A
Comments: Spike Recovery for Antimony = 47.5%, post digest = 99%.
~~LCS recovery for Antimony = 76.6%~~ → no qual. for Sb based on
~~Spike Recovery~~ Good spike recovery for Titanium
was ~~[illegible]~~ 76.8%, but sample was > ~~5X~~ 4X spike level. DW procedure 5/21/94
5/21/94

024

INORGANIC ANALYSIS DATA VALIDATION CHECKLIST

6. PRECISION

Were laboratory duplicates analyzed? . . . . . Yes No N/A
Are laboratory duplicate samples RPD values acceptable? . . . . Yes No N/A
Were ICP serial dilution samples analyzed? . . . . . Yes No N/A
Are ICP serial dilution %D values acceptable? . . . . . Yes No N/A
Are field duplicate RPD values acceptable? . . . . . Yes No N/A
Are field split RPD values acceptable? . . . . . Yes No N/A
Comments: LEAD RESULT WAS FLAGGED OUTSIDE CRITERIA BY THE LABORATORY, HOWEVER THE RESULTS WERE < 5CRQL + < 2X CRQL RPD LIMIT, NO QUALIFICATION.

7. FURNACE AA QUALITY CONTROL

Were duplicate injections performed as required? . . . . . Yes No N/A
Are duplicate injection %RSD values acceptable? . . . . . Yes No N/A
Were analytical spikes performed as required? . . . . . Yes No N/A
Are analytical spike recoveries acceptable? . . . . . Yes No N/A
Was MSA performed as required? . . . . . Yes No N/A
Are MSA results acceptable? . . . . . Yes No N/A
Comments:

8. REPORTED RESULTS AND DETECTION LIMITS

Are results reported for all requested analyses? . . . . . Yes No N/A
Are all results supported in the raw data? . . . . . Yes No N/A
Are results calculated properly? . . . . . Yes No N/A
Do results meet the CRDLs? . . . . . Yes No N/A
Comments:

RE: SEMIVOLATILE ORGANIC ANALYSIS DATA VALIDATION SUMMARY FOR DATA PACKAGE B09355-TMA-615 (923-E418/615SVOA.UP2)

INTRODUCTION

This memo presents the results of data validation on data package B09355-TMA-615 prepared by TMA/ARLI laboratory. A list of samples validated along with the analyses reported and the method(s) of analysis is provided in the following table.

SAMPLE ID	SAMPLE DATE	MEDIA	ANALYSIS
B09355	9/20/93	SOIL	SEE NOTE 1
B09356	9/20/93	SOIL	
B09357	9/20/93	SOIL	
B09359	9/20/93	SOIL	
B09360	9/20/93	SOIL	
B09361	9/20/93	SOIL	
B09362	9/20/93	SOIL	

Notes:

1. All samples were analyzed for Semivolatile Organic Analysis only.

Data validation was conducted in accordance with the WHC statement of work (WHC 1993a) and validation procedures (WHC 1993b). Attachments 1 through 5 provide the following information as indicated below:

Attachment 1. Glossary of Data Reporting Qualifiers
Attachment 2. Summary of Data Qualifications
Attachment 3. Qualified Data Summary and Annotated Laboratory Reports
Attachment 4. Laboratory Narrative and Chain-of-Custody Documentation
Attachment 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

Precision. Goals for precision were met.

Accuracy. Goals for accuracy were met.

Sample Result Verification. All sample results were supported in the raw data.

Detection Limits. Detection limit goals were met for all sample results as specified in the reference analytical method.

Completeness. The data package was complete for all requested analyses. A total of seven samples were validated in this data package with a total of 448 determinations reported, all of which were deemed valid. This results in a completeness of 100 percent which meets normal work plan objectives of 90%.

MAJOR DEFICIENCIES

No major deficiencies were identified during data validation which required qualification of data as unusable.

MINOR DEFICIENCIES

The following minor deficiencies were identified during data validation which required qualification of data.

Laboratory Blanks

- Di-n-butylphthalate was detected in the laboratory blank. Attachment 2 provides a summary of the samples and data qualification applied.
- Three tentatively identified compounds (TIC's) were detected in the laboratory blank. Attachment 2 provides a summary of the samples and data qualification applied.

GLOSSARY OF DATA REPORTING QUALIFIERS

9W/322.255

GLOSSARY OF ORGANIC DATA REPORTING QUALIFIERS

B - Indicates the constituent was analyzed for and detected in the associated laboratory blank. This qualifier is applied by the laboratory. During the process of data validation this qualifier may be replaced by other appropriate qualifiers as defined by the validation procedures. The associated data should be considered usable for decision making purposes.

U - Indicates the constituent was analyzed for and not detected. The concentration reported is the sample quantitation limit corrected for aliquot size, dilution and percent solids (in the case of solid matrices) by the laboratory. The associated data should be considered usable for decision making purposes.

UJ - Indicates the constituent was analyzed for and not detected. Due to a minor quality control deficiency identified during data validation the concentration reported may not accurately reflect the sample quantitation limit. The associated data should be considered usable for decision making purposes.

J - Indicates the constituent was analyzed for and detected. This qualifier may be applied by the laboratory to indicate a concentration which is less than the contract required quantitation limit (CRQL) but greater than the instrument detection limit (IDL). During data validation this qualifier may be applied to indicate a minor quality control deficiency. However in either case, the associated data should be considered usable for decision making purposes.

NJ - Indicates presumptive evidence of a constituent at an estimated value. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

N - Indicates presumptive evidence of a constituent. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

JN - Indicates a tentatively identified compound (TIC) whose concentration and identification have been determined to be valid as a result of data validation. The associated data should be considered usable for decision making purposes.

UR - Indicates the constituent was analyzed for and not detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

R - Indicates the constituent was analyzed for and detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

LABORATORY NARRATIVE AND CHAIN-OF-CUSTODY DOCUMENTATION

9413225.2591

CASE NARRATIVE

LABORATORY : TMA/ARLI

CASE : 09-078

CONTRACT ID : WESTINGHOUSE HANFORD COMPANY

SDG RECEIPT DATE : September 27, 1993

1.0 DESCRIPTION OF CASE :

Eight soil samples were analyzed for TCL Organics- Volatiles and Semivolatiles according to the USEPA Contract Laboratory Program (CLP) Statement of Work for Organic Analysis, Revision OLM01.8. The Total Petroleum Hydrocarbons in the Kerosene range (K) were analyzed according to the SW-846 Method 8015M.

3.0 COMMENTS :

3.1 SHIPPING AND DOCUMENTATION :

A 250 mL Volatile container for sample B09361 was broken at TMA/ARLI. As per WHC ROD-93-0215, TMA/ARLI was instructed to use the Kerosene aliquot of that sample for the Volatile analysis. Both Kerosene and Semivolatiles will be analyzed for by utilizing the 250 mL bottle designated for the Semivolatiles analysis.

All of the other sample containers were received intact and properly documented.

3.2 ANALYSIS

3.2.1 VOLATILE ANALYSIS COMMENTS :

LOW LEVEL SOIL :

The samples were analyzed by heated purge within the CLP SOW holding times.

All of the QC results were within the limits specified by the EPA CLP SOW.

TUNES :

All BFB tunes were injected directly into the GC/MS instrument.

3.2.2 SEMIVOLATILE ANALYSIS COMMENTS :

LOW LEVEL SOIL :

The samples were extracted and analyzed within the contract required holding times.

No TCL analytes were detected in the samples, with the exception of trace amounts of Di-n-butylphthalate ranging from 290 to 410 ppb.

All of the QC results were within the limits specified by the EPA CLP SOW.

3.2.3 TOTAL PETROLEUM HYDROCARBONS "KEROSENE RANGE" COMMENTS :

SEQUENCE NOTES :

The sequence was started on 10/05/93 and was analyzed according to the SW-846 Method 8015M. The initial calibration consisted of 5 different levels of the Kerosene standard that ranged from 200ppm to 2000ppm. The continuing calibration at the 1000ppm level was injected amongst a series of samples, in

order to verify the instrument stability. The %RSD in the initial calibration and the %D in the continuing calibration were below their 20% and 15% limits, respectively.

SAMPLE NOTES :

LOW LEVEL SOIL :

The samples were extracted and analyzed within the SW-846 holding time. Approximately 20g of each sample was extracted and concentrated to a final volume of 5 mL. The samples were then analyzed by GC/FID for total petroleum hydrocarbons in the Kerosene range by Method 8015M. There were no total petroleum hydrocarbons detected in the samples.

Sample B09357 was spiked with approximately 245 ug/Kg of Kerosene. The spike recoveries were between 90% and 92%, whereas the blank spike had a recovery of 82%.

All of the QC results were within the limits specified by the SW-846 Method 8015M.

9W3225.2584

We certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data in this hardcopy data package and in the computer-readable data submitted on diskette is authorized by the Laboratory Manager or his designee, as verified by the following signatures.

RE: SEMIVOLATILE ORGANIC ANALYSIS DATA VALIDATION SUMMARY FOR DATA PACKAGE B09355-TMA-615 (923-E418/615SVOA.UP2)

INTRODUCTION

This memo presents the results of data validation on data package B09355-TMA-615 prepared by TMA/ARLI laboratory. A list of samples validated along with the analyses reported and the method(s) of analysis is provided in the following table.

SAMPLE ID	SAMPLE DATE	MEDIA	ANALYSIS
B09355	9/20/93	SOIL	SEE NOTE 1
B09356	9/20/93	SOIL	
B09357	9/20/93	SOIL	
B09359	9/20/93	SOIL	
B09360	9/20/93	SOIL	
B09361	9/20/93	SOIL	
B09362	9/20/93	SOIL	

Notes:

1. All samples were analyzed for Semivolatile Organic Analysis only.

Data validation was conducted in accordance with the WHC statement of work (WHC 1993a) and validation procedures (WHC 1993b). Attachments 1 through 5 provide the following information as indicated below:

Attachment 1. Glossary of Data Reporting Qualifiers
Attachment 2. Summary of Data Qualifications
Attachment 3. Qualified Data Summary and Annotated Laboratory Reports
Attachment 4. Laboratory Narrative and Chain-of-Custody Documentation
Attachment 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

Precision. Goals for precision were met.

Accuracy. Goals for accuracy were met.

Sample Result Verification. All sample results were supported in the raw data.

Detection Limits. Detection limit goals were met for all sample results as specified in the reference analytical method.

Completeness. The data package was complete for all requested analyses. A total of seven samples were validated in this data package with a total of 448 determinations reported, all of which were deemed valid. This results in a completeness of 100 percent which meets normal work plan objectives of 90%.

MAJOR DEFICIENCIES

No major deficiencies were identified during data validation which required qualification of data as unusable.

MINOR DEFICIENCIES

The following minor deficiencies were identified during data validation which required qualification of data.

Laboratory Blanks

- Di-n-butylphthalate was detected in the laboratory blank. Attachment 2 provides a summary of the samples and data qualification applied.
- Three tentatively identified compounds (TIC's) were detected in the laboratory blank. Attachment 2 provides a summary of the samples and data qualification applied.

GLOSSARY OF ORGANIC DATA REPORTING QUALIFIERS

B - Indicates the constituent was analyzed for and detected in the associated laboratory blank. This qualifier is applied by the laboratory. During the process of data validation this qualifier may be replaced by other appropriate qualifiers as defined by the validation procedures. The associated data should be considered usable for decision making purposes.

U - Indicates the constituent was analyzed for and not detected. The concentration reported is the sample quantitation limit corrected for aliquot size, dilution and percent solids (in the case of solid matrices) by the laboratory. The associated data should be considered usable for decision making purposes.

UJ - Indicates the constituent was analyzed for and not detected. Due to a minor quality control deficiency identified during data validation the concentration reported may not accurately reflect the sample quantitation limit. The associated data should be considered usable for decision making purposes.

J - Indicates the constituent was analyzed for and detected. This qualifier may be applied by the laboratory to indicate a concentration which is less than the contract required quantitation limit (CRQL) but greater than the instrument detection limit (IDL). During data validation this qualifier may be applied to indicate a minor quality control deficiency. However in either case, the associated data should be considered usable for decision making purposes.

NJ - Indicates presumptive evidence of a constituent at an estimated value. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

N - Indicates presumptive evidence of a constituent. This qualifier is normally applied to GC analysis data (such as organochlorine pesticide and PCB data). The associated data should be considered usable for decision making purposes.

JN - Indicates a tentatively identified compound (TIC) whose concentration and identification have been determined to be valid as a result of data validation. The associated data should be considered usable for decision making purposes.

UR - Indicates the constituent was analyzed for and not detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

R - Indicates the constituent was analyzed for and detected. The concentration reported has been qualified as unusable due to a major quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

CASE NARRATIVE

LABORATORY : TMA/ARLI

CASE : 09-078

CONTRACT ID : WESTINGHOUSE HANFORD COMPANY

SDG RECEIPT DATE : September 27, 1993

1.0 DESCRIPTION OF CASE :

Eight soil samples were analyzed for TCL Organics- Volatiles and Semivolatiles according to the USEPA Contract Laboratory Program (CLP) Statement of Work for Organic Analysis, Revision OLM01.8. The Total Petroleum Hydrocarbons in the Kerosene range (K) were analyzed according to the SW-846 Method 8015M.

2.0 SAMPLE LIST :

3.0 COMMENTS :

3.1 SHIPPING AND DOCUMENTATION :

A 250 mL Volatile container for sample B09361 was broken at TMA/ARLI. As per WHC ROD-93-0215, TMA/ARLI was instructed to use the Kerosene aliquot of that sample for the Volatile analysis. Both Kerosene and Semivolatiles will be analyzed for by utilizing the 250 mL bottle designated for the Semivolatiles analysis.

All of the other sample containers were received intact and properly documented.

3.2 ANALYSIS

3.2.1 VOLATILE ANALYSIS COMMENTS :

LOW LEVEL SOIL :

The samples were analyzed by heated purge within the CLP SOW holding times.

All of the QC results were within the limits specified by the EPA CLP SOW.

TUNES :

All BFB tunes were injected directly into the GC/MS instrument.

3.2.2 SEMIVOLATILE ANALYSIS COMMENTS :

LOW LEVEL SOIL :

The samples were extracted and analyzed within the contract required holding times.

No TCL analytes were detected in the samples, with the exception of trace amounts of Di-n-butylphthalate ranging from 290 to 410 ppb.

All of the QC results were within the limits specified by the EPA CLP SOW.

3.2.3 TOTAL PETROLEUM HYDROCARBONS "KEROSENE RANGE" COMMENTS :

SEQUENCE NOTES :

The sequence was started on 10/05/93 and was analyzed according to the SW-846 Method 8015M. The initial calibration consisted of 5 different levels of the Kerosene standard that ranged from 200ppm to 2000ppm. The continuing calibration at the 1000ppm level was injected amongst a series of samples, in

order to verify the instrument stability. The %RSD in the initial calibration and the %D in the continuing calibration were below their 20% and 15% limits, respectively.

SAMPLE NOTES :

LOW LEVEL SOIL :

The samples were extracted and analyzed within the SW-846 holding time. Approximately 20g of each sample was extracted and concentrated to a final volume of 5 mL. The samples were then analyzed by GC/FID for total petroleum hydrocarbons in the Kerosene range by Method 8015M. There were no total petroleum hydrocarbons detected in the samples.

Sample B09357 was spiked with approximately 245 ug/Kg of Kerosene. The spike recoveries were between 90% and 92%, whereas the blank spike had a recovery of 82%.

All of the QC results were within the limits specified by the SW-846 Method 8015M.

9417225.2629

We certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data in this hardcopy data package and in the computer-readable data submitted on diskette is authorized by the Laboratory Manager or his designee, as verified by the following signatures.

RE: RADIOCHEMISTRY DATA VALIDATION SUMMARY FOR DATA PACKAGE: B09355-TMA-615 (923-E418, Filename B09355.RAD)

INTRODUCTION

This memo presents the results of data validation on data package B09355-TMA-615 prepared by the Thermo Analytical (TMA) laboratory. A list of samples validated along with the analyses reported and the method of analysis is provided in the following table:

RECEIVED
MAR 28 1994
VALIDATION DOCUMENTATION
SDLA

SAMPLE ID	SAMPLE DATE	MEDIA	ANALYSIS
B09355	09/20/93	SOIL	SEE NOTE 1
B09356	09/20/93	SOIL	
B09357	09/20/93	SOIL	
B09359	09/20/93	SOIL	
B09360	09/20/93	SOIL	
B09361	09/20/93	SOIL	
B09362	09/20/93	SOIL	

Note 1. All samples were analyzed for gross alpha, gross beta, selenium-79, strontium-90, technetium-99, iodine-129, isotopic uranium, total uranium, neptunium-237, plutonium-238, plutonium-239/140, americium-241, curium-244, and gamma spectroscopy.

Data validation was conducted in accordance with the WHC statement of work (WHC 1993a) and validation procedures (WHC 1993b). Attachments 1 through 5 provide the following information as indicated below:

Attachment 1. Glossary of Data Reporting Qualifiers
Attachment 2. Summary of Data Qualifications
Attachment 3. Qualified Data Summary and Annotated Laboratory Reports
Attachment 4. Laboratory Narrative and Chain-of-Custody Documentation
Attachment 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

Precision. Goals for precision were met.

Accuracy. Goals for accuracy were met with the exception of the deficiencies summarized below.

Sample Result Verification. All sample results were supported in the raw data.

001

Detection Limits. Detection limit goals were met for all sample results with the exception the following:

SAMPLE ID	ANALYTE	MDA (pCi/g)	RDL (pCi/g)
B09355	IRON-59	0.1	0.05
B09356	IRON-59	0.1	0.05
B09357	IRON-59	0.1	0.05

Completeness. The data package was complete for all requested analyses. A total of seven samples were validated in this data package with a total of 245 determinations reported, all of which were deemed valid. This results in a completeness of 100 percent, which meets normal work plan objectives of 90%.

Sample B09359 was identified as a field blank and contains low levels of total uranium, radium-226, radium-228, thorium-228, and thorium-232. Sample B09360 was identified as an equipment blank and contains low levels of uranium-233/234, total uranium, potassium-40, radium-226, radium-228, thorium-228, and thorium-232. Attachments 3 and 5 provide the data summaries listing the specific sample activity levels for the positive results.

MAJOR DEFICIENCIES

No major deficiencies were identified during data validation which required qualification of data as unusable.

MINOR DEFICIENCIES

The following minor deficiencies were identified during data validation which required qualification of data.

Chemical Yield

- Neptunium-237 chemical yield for sample B09357 was unacceptable. Attachments 2 and 5 provide a summary of data qualification applied and supporting documentation.

GLOSSARY OF DATA REPORTING QUALIFIERS

9117225.2645

GLOSSARY OF RADIOCHEMISTRY DATA REPORTING QUALIFIERS

U - Indicates the constituent was analyzed for, but was not detected at a concentration above the minimum detectable activity (MDA). The concentration reported is the MDA corrected for sample aliquot size, dilution factors and percent solids (in the case of solid matrices) by the laboratory. The associated data should be considered usable for decision making purposes.

UJ - Indicates the constituent was analyzed for and was not detected at a concentration above the MDA. Due to a quality control deficiency identified during data validation, the concentration reported may not accurately reflect the sample MDA. The associated data should be considered usable for decision making purposes.

J - Indicates the constituent was analyzed for and detected. The concentration reported is qualified as estimated due to a quality control deficiency identified during data validation. The associated data should be considered usable for decision making purposes.

UR - Indicates the constituent was analyzed for and not detected. The concentration reported is qualified as unusable due to a quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

R - Indicates the constituent was analyzed for and detected. The concentration reported is qualified as unusable due to a quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

LABORATORY NARRATIVE AND CHAIN-OF-CUSTODY DOCUMENTATION

9W3225.2666

TMA/Norcal
Report N3-09-139-7266
Sample Delivery Group 7266

Westinghouse Hanford Company
P.O. MBH-SVV-069262

Case Narrative

January 12, 1994

1.0 GENERAL

TMA/Norcal Sample Delivery Group 7266 is comprised of the seven soil samples from location 200-UP-2, delivered under Field Log Book #EFL-1091. Chain-of-Custody numbers were not provided.

One 100 mL plastic bottle containing each sample was received for the analyses. This was not an adequate volume to obtain the required detection limit for gamma scan for the duplicate analysis.

2.0 ANALYSIS NOTES

2.1 Gross Alpha Analyses
No problems were encountered by the laboratory in the analyses

2.2 Gross Beta Analyses
No problems were encountered by the laboratory in the analyses.

2.3 Selenium-79 Analyses
No problems were encountered by the laboratory in the analyses.

2.4 Strontium-90 Analyses
No problems were encountered by the laboratory in the analyses.

2.5 Technetium-99 Analyses
No problems were encountered by the laboratory in the analyses.

2.6 Iodine-129 Analyses
No problems were encountered by the laboratory in the analyses.

2.7 Neptunium-237 Analyses
No problems were encountered by the laboratory in the analyses.

2.8 Total Uranium Analyses
No problems were encountered by the laboratory in the analyses.

TMA/Norcal
Report N3-09-139-7266
Sample Delivery Group 7266

Westinghouse Hanford Company
P.O. MBH-SVV-069262

Case Narrative

January 12, 1994

2.0 ANALYSIS NOTES (cont.)

2.9 **Isotopic Uranium Analyses**
The uranium-233/234 and uranium-238 MDA's for the LCS are higher than the RDL's due to interferencefrom uranium-235. Sample B09362, the blank, the LCS, and the duplicate were counted for less than the nominal count time of 150 minutes.

3.0 **Isotopic Plutonium Analyses**
No problems were encountered by the laboratory in the analyses.

3.1 **Americium-241/Curium-244 Analyses**
No problems were encountered by the laboratory in the analyses. Samples B09359, B09360, B09361, B09362, and the duplicate of B09355 were counted for less than the nominal count time of 700 minutes.

3.2 **Gamma Scan Analyses**
The MDA's of several gamma nuclides for the duplicate analyses of sample B09355 are higher than the RDL's due to the smaller than nominal aliquot available for analysis. The MDA of iron-59 for all the samples is higher than the RDL due to the short half-life of iron-59.

Field duplicate sample(s) analyzed? . . . . . Yes No N/A
Field duplicate RPD values acceptable? . . . . . Yes No N/A
Field split sample(s) analyzed? . . . . . Yes No N/A
Field split RPD values acceptable? . . . . . Yes No N/A
Performance audit sample(s) analyzed? . . . . . Yes No N/A
Performance audit sample results acceptable? . . . . . Yes No N/A

Comments: The Uranium-238 field duplicate result (See sample B09357) is acceptable since the sample results are less than 5xRDL and the difference between the two results is within the range of 1.5xRDL.

3/22/94

10. Holding Times

Are sample holding times acceptable? . . . . . Yes No N/A

Comments:

11. Results and Detection Limits (Levels D & E) . . . . . ☐ N/A

Results reported for all required sample analyses? . . . . . Yes No N/A
Results supported in raw data? . . . . . Yes No N/A
Results Acceptable? . . . . . Yes No N/A
Transcription/Calculation errors? . . . . . Yes No N/A
MDA's meet required detection limits? . . . . . Yes No N/A
Transcription/calculation errors? . . . . . Yes No N/A

Comments: See last page for checklist for comments.

Comments: Comments to Item 4:

- Sample B09359 is identified as a field blank. All results are nondetects with the exception of the following:

B09359 - Field Blank (299-W19-9S)

Analyte	Result
Total Uranium	0.19 ug/g
Radium-226	0.12 pCi/g
Radium-228	0.095 pCi/g
Thorium-228	0.11 pCi/g
Thorium-232	0.095 pCi/g

- Sample B09360 is identified as an equipment blank. All results are undetected with the exception of the following:

B09360 - Equipment Blank

Analyte	Result
Uranium-233/234	0.12 pCi/g
Total Uranium	0.20 ~~pCi/g~~ ug/g 3/22/94
Potassium-40	0.33 pCi/g
Radium-226	0.084 pCi/g
Radium-228	0.16 pCi/g
Thorium-228	0.15 pCi/g
Thorium-232	0.14 pCi/g

- ~~Sample B09355 is identified as a field trip blank. All results are nondetects with the exception of the following:~~

~~B09355 - Field Trip Blank~~

~~Analyte~~	~~Result~~
~~Cesium-137~~	~~0.12 pCi/g~~
~~Cesium-134~~	~~0.13 pCi/g~~
~~Uranium-233/234~~	~~0.13 pCi/g~~
~~Uranium-238~~	~~0.13 pCi/g~~
~~Total Uranium~~	~~[illegible] ug/g~~
~~Potassium-40~~	~~[illegible] pCi/g~~
~~Radium-226~~	~~1.0 pCi/g~~
~~Radium-228~~	~~0.30 pCi/g~~
~~Thorium-228~~	~~0.03 pCi/g~~
~~Thorium-232~~	~~0.02 pCi/g~~

3/22/94

9413225.2677

036

Comments: Comment to Item 7:

- The neptunium-237 chemical yields for the following samples were unacceptable. Therefore the assoc. result has been qualified as estimated (J/UJ)

Sample ID	Chemical yield	Qualifier	
~~B09355~~	~~26%~~	~~UJ~~	Alpha Spec
~~B09356~~	~~27%~~	~~UJ~~	Control
B09357	~~20%~~ 19.6%	UJ	limit is
3/22/94 ~~B09359~~	~~23%~~	~~UJ~~	20%-105%
~~B09361~~	~~25%~~	~~UJ~~	
~~LCS (7266-008)~~	~~27%~~	~~UJ~~	3/24/94
~~B09355 Duplicate~~	~~27%~~	~~UJ~~	

Comments to Item 11:

- All MDAs meet the RDLs w/ the exception of:

Sample ID	Analyte	MDA	RDL	Units
B09355	Iron-59	0.1	0.05	pCi/g
B09356	Iron-59	0.1	0.05	pCi/g
B09357	Iron-59	0.1	0.05	pCi/g
B09360	Iron-59	0.06	0.05	pCi/g
B09361	Iron-59	0.1	0.05	pCi/g
B09362	Iron-59	0.1	0.05	pCi/g
LCS (7266-008)	U-233/234	0.4	0.3	pCi/g
↓	U-238	0.4	0.3	pCi/g
B09355 Dup	Iron-59	0.2	0.05	pCi/g
	Cobalt-58	0.08	0.05	pCi/g
	Cobalt-60	0.09	0.05	pCi/g
↓	Cesium-137	0.07	0.05	pCi/g

No qualification is required.

- The raw data for Iodine-129, sample B09355 Duplicate, was not included in the data package, since the raw data for all other samples was included the package could be completely validated.

No qualification is required.

3/22/94

Comments:

Combined comments to Item 1:

The MDA value of 0.1 for total uranium, for the laboratory control sample and blank cannot be verified against the raw data. No qualification is required.

Comment to Item 2:

The initial calibration verification for the Xspec detectors used to perform the iodine analysis was not included in this data package but was obtained from package B0R31-TMA-580.

RE: RADIOCHEMISTRY DATA VALIDATION SUMMARY FOR DATA PACKAGE: B09355-TMA-615 (923-E418, Filename B09355.RAD)

INTRODUCTION

This memo presents the results of data validation on data package B09355-TMA-615 prepared by the Thermo Analytical (TMA) laboratory. A list of samples validated along with the analyses reported and the method of analysis is provided in the following table:

SAMPLE ID	SAMPLE DATE	MEDIA	ANALYSIS
B09355	09/20/93	SOIL	SEE NOTE 1
B09356	09/20/93	SOIL	
B09357	09/20/93	SOIL	
B09359	09/20/93	SOIL	
B09360	09/20/93	SOIL	
B09361	09/20/93	SOIL	
B09362	09/20/93	SOIL	

Note 1. All samples were analyzed for gross alpha, gross beta, selenium-79, strontium-90, technetium-99,iodine-129, isotopic uranium, total uranium, neptunium-237, plutonium-238, plutonium-239/140, americium-241, curium-244, and gamma spectroscopy.

MAR 29 1994

Data validation was conducted in accordance with the WHC statement of work (WHC 1993a) and validation procedures (WHC 1993b). Attachments 1 through 5 provide the following information as indicated below:

Attachment 1. Glossary of Data Reporting Qualifiers
Attachment 2. Summary of Data Qualifications
Attachment 3. Qualified Data Summary and Annotated Laboratory Reports
Attachment 4. Laboratory Narrative and Chain-of-Custody Documentation
Attachment 5. Data Validation Supporting Documentation

DATA QUALITY OBJECTIVES

Precision. Goals for precision were met.

Accuracy. Goals for accuracy were met with the exception of the deficiencies summarized below.

Sample Result Verification. All sample results were supported in the raw data.

001

Detection Limits. Detection limit goals were met for all sample results with the exception the following:

SAMPLE ID	ANALYTE	MDA (pCi/g)	RDL (pCi/g)
B09355	IRON-59	0.1	0.05
B09356	IRON-59	0.1	0.05
B09357	IRON-59	0.1	0.05
B09360	IRON-59	0.06	0.05
B09361	IRON-59	0.1	0.05
B09362	IRON-59	0.1	0.05
LCS	URANIUM-233/234	0.4	0.3
LCS	URANIUM-238	0.4	0.3
B09355 DUPLICATE	IRON-59	0.2	0.05
B09355 DUPLICATE	COBALT-58	0.08	0.05
B09355 DUPLICATE	COBALT-60	0.09	0.05
B09355 DUPLICATE	CESIUM-137	0.07	0.05

Completeness. The data package was complete for all requested analyses. A total of seven samples were validated in this data package with a total of 245 determinations reported, all of which were deemed valid. This results in a completeness of 100 percent, which meets normal work plan objectives of 90%.

Sample B09359 was identified as a field blank and contains low levels of total uranium, radium-226, radium-228, thorium-228, and thorium-232. Sample B09360 was identified as an equipment blank and contains low levels of uranium-233/234, total uranium, potassium-40, radium-226, radium-228, thorium-228, and thorium-232. Attachments 3 and 5 provide the data summaries listing the specific sample activity levels for the positive results.

MAJOR DEFICIENCIES

No major deficiencies were identified during data validation which required qualification of data as unusable.

MINOR DEFICIENCIES

The following minor deficiencies were identified during data validation which required qualification of data.

Chemical Yield

- Neptunium-237 chemical yield for sample B09357 was unacceptable. Attachments 2 and 5 provide a summary of data qualification applied and supporting documentation.

GLOSSARY OF DATA REPORTING QUALIFIERS

9413225.2696

GLOSSARY OF RADIOCHEMISTRY DATA REPORTING QUALIFIERS

U - Indicates the constituent was analyzed for, but was not detected at a concentration above the minimum detectable activity (MDA). The concentration reported is the MDA corrected for sample aliquot size, dilution factors and percent solids (in the case of solid matrices) by the laboratory. The associated data should be considered usable for decision making purposes.

UJ - Indicates the constituent was analyzed for and was not detected at a concentration above the MDA. Due to a quality control deficiency identified during data validation, the concentration reported may not accurately reflect the sample MDA. The associated data should be considered usable for decision making purposes.

J - Indicates the constituent was analyzed for and detected. The concentration reported is qualified as estimated due to a quality control deficiency identified during data validation. The associated data should be considered usable for decision making purposes.

UR - Indicates the constituent was analyzed for and not detected. The concentration reported is qualified as unusable due to a quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

R - Indicates the constituent was analyzed for and detected. The concentration reported is qualified as unusable due to a quality control deficiency identified during data validation. The associated data should be considered unusable for decision making purposes.

LABORATORY NARRATIVE AND CHAIN-OF-CUSTODY DOCUMENTATION

9413225.2717

TMA/Norcal
Report N3-09-139-7266
Sample Delivery Group 7266

Westinghouse Hanford Company
P.O. MBH-SVV-069262

Case Narrative

January 12, 1994

1.0 GENERAL

TMA/Norcal Sample Delivery Group 7266 is comprised of the seven soil samples from location 200-UP-2, delivered under Field Log Book #EFL-1091. Chain-of-Custody numbers were not provided.

One 100 mL plastic bottle containing each sample was received for the analyses. This was not an adequate volume to obtain the required detection limit for gamma scan for the duplicate analysis.

9413225.2718

2.0 ANALYSIS NOTES

2.1 Gross Alpha Analyses
No problems were encountered by the laboratory in the analyses

2.2 Gross Beta Analyses
No problems were encountered by the laboratory in the analyses.

2.3 Selenium-79 Analyses
No problems were encountered by the laboratory in the analyses.

2.4 Strontium-90 Analyses
No problems were encountered by the laboratory in the analyses.

2.5 Technetium-99 Analyses
No problems were encountered by the laboratory in the analyses.

2.6 Iodine-129 Analyses
No problems were encountered by the laboratory in the analyses.

2.7 Neptunium-237 Analyses
No problems were encountered by the laboratory in the analyses.

2.8 Total Uranium Analyses
No problems were encountered by the laboratory in the analyses.

TMA/Norcal
Report N3-09-139-7266
Sample Delivery Group 7266

Westinghouse Hanford Company
P.O. MBH-SVV-069262

Case Narrative

January 12, 1994

2.0 ANALYSIS NOTES (cont.)

2.9 Isotopic Uranium Analyses
The uranium-233/234 and uranium-238 MDA's for the LCS are higher than the RDL's due to interferencefrom uranium-235. Sample B09362, the blank, the LCS, and the duplicate were counted for less than the nominal count time of 150 minutes.

3.0 Isotopic Plutonium Analyses
No problems were encountered by the laboratory in the analyses.

3.1 Americium-241/Curium-244 Analyses
No problems were encountered by the laboratory in the analyses. Samples B09359, B09360, B09361, B09362, and the duplicate of B09355 were counted for less than the nominal count time of 700 minutes.

3.2 Gamma Scan Analyses
The MDA's of several gamma nuclides for the duplicate analyses of sample B09355 are higher than the RDL's due to the smaller than nominal aliquot available for analysis. The MDA of iron-59 for all the samples is higher than the RDL due to the short half-life of iron-59.

Chemical carrier expired? . . . . . Yes No N/A
Transcription/Calculation errors? . . . . . Yes No N/A

Comments: ~~All chemical and tracer recoveries are acceptable with the exception of~~ sample BC9357 ~~chemical recoveries for neptunium-237. The affected samples and qualifications are listed on the last page of this checklist.~~

8/22/94

8. Duplicates . . . . . ☐ N/A

Duplicates Analyzed? . . . . . Yes No N/A
RPD Values Acceptable? . . . . . Yes No N/A
Transcription/Calculation Errors? . . . . . Yes No N/A

Comments:

9413225.2726

034

9. Field QC Samples . . . . . ☐ N/A

Field duplicate sample(s) analyzed? . . . . . Yes No N/A
Field duplicate RPD values acceptable? . . . . . Yes No N/A
Field split sample(s) analyzed? . . . . . Yes No N/A
Field split RPD values acceptable? . . . . . Yes No N/A
Performance audit sample(s) analyzed? . . . . . Yes No N/A
Performance audit sample results acceptable? . . . . . Yes No N/A

Comments: The Uranium-238 field duplicate result (for sample B09357) is acceptable since the sample results are less than 5xRDL and the difference between the two results is within the range of 1xRDL.

10. Holding Times

Are sample holding times acceptable? . . . . . Yes No N/A

Comments:

11. Results and Detection Limits (Levels D & E) . . . . . ☐ N/A

Results reported for all required sample analyses? . . . . . Yes No N/A
Results supported in raw data? . . . . . Yes No N/A
Results Acceptable? . . . . . Yes No N/A
Transcription/Calculation errors? . . . . . Yes No N/A
MDA's meet required detection limits? . . . . . Yes No N/A
Transcription/calculation errors? . . . . . Yes No N/A

Comments: See last page of checklist for comments.
The laboratory inserted "J" qualifiers for samples B09360, B09361 and B09362. These J qualifiers have been crossed off the laboratory results forms for clarification purposes and are not considered appropriate for radiochemistry validation.

Revised page 4/18/94

Comments: Comments to Item 4:

- Sample B09359 is identified as a field blank. All results are nondetects with the exception of the following:

B09359 - Field Blank of 299-W19-95

Analyte	Result
Total Uranium	0.19 ug/g
Radium-226	0.12 pCi/g
Radium-228	0.095 pCi/g
Thorium-228	0.11 pCi/g
Thorium-232	0.095 pCi/g

- Sample B09360 is identified as an equipment blank. All results are undetected with the exception of the following:

B09360 - Equipment Blank

Analyte	Result
Uranium-233/234	0.12 pCi/g
Total Uranium	0.20 ~~pCi/g~~ ug/g 3/22/94
Potassium-40	0.33 pCi/g
Radium-226	0.084 pCi/g
Radium-228	0.16 pCi/g
Thorium-228	0.15 pCi/g
Thorium-232	0.16 pCi/g

~~Sample B09333 is identified as a field trip blank. All results are nondetects with the exception of the following~~

~~B09333 - Field Trip Blank~~

~~Analyte~~	~~Result~~
~~Gross Alpha~~	~~12 pCi/g~~
~~Gross Beta~~	~~13 pCi/g~~
~~Uranium-233/234~~	~~1.3 pCi/g~~
~~Uranium-238~~	~~1.3 pCi/g~~
~~Total Uranium~~	~~3.6 ug/g~~
~~Potassium-40~~	~~6.1 pCi/g~~
~~Radium-226~~	~~1.0 pCi/g~~
~~Radium-228~~	~~0.92 pCi/g~~
~~Thorium-228~~	~~0.63 pCi/g~~
~~Thorium-232~~	~~0.82 pCi/g~~

3/22/94

9413225.2728

Comments: Comment to Item 7:

- The neptunium-237 chemical yields for the following samples were unacceptable. Therefore the assoc. result has been qualified as estimated (J/UJ)

Sample ID	Chemical yield	Qualifier
~~B09355~~	~~26%~~	~~UJ~~
~~B09356~~	~~27%~~	~~UJ~~
B09357	~~20%~~ 19.6%	UJ
3/22/94 ~~B09357-9~~	~~23%~~	~~UJ~~
~~B09361~~	~~26%~~	~~UJ~~
~~LCS (7366-008)~~	~~29%~~	~~UJ~~
~~B09355 Duplicate~~	~~27%~~	~~UJ~~

Alpha Spec control limit is 20%-105%

3/24/94

Comments to Item 11:

- All MDAs met the RDLs w/ the exception of:

Sample ID	Analyte	MDA	RDL	Units
B09355	Iron-59	0.1	0.05	pCi/g
B09356	Iron-59	0.1	0.05	pCi/g
B09357	Iron-59	0.1	0.05	pCi/g
B09360	Iron-59	0.06	0.05	pCi/g
B09361	Iron-59	0.1	0.05	pCi/g
B09362	Iron-59	0.1	0.05	pCi/g
LCS (7366-008)	U-233/234	0.4	0.3	pCi/g
↓	U-238	0.4	0.3	pCi/g
B09355 Dup	Iron-59	0.2	0.05	pCi/g
	Cobalt-58	0.08	0.05	pCi/g
	Cobalt-60	0.09	0.05	pCi/g
	Cesium-137	0.07	0.05	pCi/g

No qualification is required

- The raw data for Iodine-129, sample B09355 Duplicate, was not included in the data pkg. However, since the raw data for all other samples was included the package could be completely validated.

No qualification is required

3/22/94

Comments:

Continued comments to Item 11.

The MDA value of 0.1 for total uranium, for the laboratory control sample and blank cannot be verified against the raw data. No qualification is required.

Comment to Item 2:

The initial calibration certificate for the Xspec detectors used to perform the iodine analysis was not included in this data package but was obtained from package B0B31-TMA-580.
