ANALYTICAL CASE NARRATIVE

Client: WESTINGHOUSE HANFORD

Date Received: 11-18-93

PESTICIDE/PCB

One (1) soil sample was collected on 08-04-93.

The sample and its associated QC samples were extracted on 11-18-93 and analyzed according to criteria set forth in the Contract Laboratory Program 03/90 SOW for Pesticide and PCB target compounds on 11-22,23-93.

The following is a summary of the QC results accompanying these sample results and a description of any problems encountered during their analyses:

1. Linearity and breakdown criteria were met for each of the analytical columns.

2. Retention time criteria were met for all compounds on both analytical columns.

3. Resolution of all pesticides in the Resolution Check Standard were within EPA QC limits.

4. The RPDs of the pesticides in the Performance Evaluation Mixes analyzed for calibration verification were within 25% for both analytical columns.

5. All surrogate recoveries were within the advisory EPA QC limits.

6. All blank spike recoveries were within EPA QC limits

7. All matrix spike recoveries were within EPA QC limits.

8. Recoveries of pesticides for the Florisil Cartridge Check were within EPA QC limits.

9. Continuing calibration criteria were exceeded for the target compound 4,4'-DDD on the DB608 column on 11-24-93 at 2336. 4,4'-DDD was not present on the RTX1701 column, so the data was not impacted.

Low levels of Alpha-Chlordane and Gamma-Chlordane were found in the laboratory blank and sample B08NQ8 and its associated matrix spike samples. All sample extracts and the laboratory blank and blank spike were reanalyzed prior to the GPC cleanup and Alpha-Chlordane and Gamma-Chlordane were not identified. Both sets of data were reported.
