INTRODUCTION

The requirements for the reporting of polychlorinated biphenyl (PCB)-related activities are found in 40 Code of Federal Regulations (CFR) 761 Subpart J -- General Records and Reports. The preparation of two reports is required.

- The PCB Annual Document Log is a detailed record of the PCB waste handling activities at the facility. The facility must prepare it each year by July 1 and maintain it at the facility for at least three years after the facility ceases using or storing PCBs and PCB items. While submittal of the PCB Annual Document Log to the U.S. Environmental Protection Agency (EPA) is not required by regulation, in a letter from Daniel L. Duncan, EPA, to J. E. Rasmussen, U.S. Department of Energy, Richland Operations Office (RL), WCM-128, dated October 11, 2000, EPA requested that RL transmit a copy of the PCB Annual Document Log for the Hanford Site to EPA, Region 10, on an annual basis. Therefore, the PCB annual Document Log will be submitted with the required transmittal of the PCB Annual Report.

- The PCB Annual Report is a written document that is submitted to the EPA each year by each disposer and commercial storer of PCB waste. The facility must prepare it each year and submit it to EPA by July 15 of following calendar year. While the Hanford facility does not have a EPA approved chemical waste landfill, the on-site mixed waste disposal unit does accept TSCA regulated waste at 50 ppm or greater PCB. By letter dated April 30, 2002, EPA accepted a modified version of the "Notification of PCB Activity" Form 7701-53 that classified Hanford as an "approved disposer" with this specified condition. The PCB Annual Report is a brief summary of the information included in the PCB Annual Document Log. The PCB Annual Report for calendar year (CY) 2007 is being transmitted as a separate document.

Both the PCB Document Log and the PCB Annual Report will be submitted to EPA by July 15th.

In addition, it has been determined that some wastes in the Hanford Site Double-Shell Tank (DST) farms contain small concentrations of PCB remediation waste and are subject to *Toxic Substances Control Act* (TSCA) *of 1976* requirements. A "Framework Agreement for Management of Polychlorinated Biphenyls in Hanford Tank Waste," signed on August 31, 2000, resulted in EPA, the Washington State Department of Ecology, and the U.S. Department of Energy (DOE) and its Hanford Site contractors working together to resolve the regulatory issues associated with managing this PCB waste. Specific information on the volumes and concentrations of PCBs in the Hanford DSTs are not addressed in the PCB Annual Document Log or Annual Report. This information is being addressed through a Risk-Based Disposal Approval (RBDA) process. The DOE submitted a RBDA application to EPA Region 10 in January 2002.

6.0 SUMMARY PCB WASTE CLASSIFICATION AMENDMENTS DURING CY 2007

This page intentionally left blank

SUMMARY

SUMMARY PCB WASTE CLASSIFICATION AMENDMENTS DURING CY-2007

As the Hanford Site moves toward clean-up, many updates are made to waste data annually. For this reason, provided herein is a summary of the changes affecting the PCB Annual Document Log. This summary is to be used as a crosswalk between the 2006 and the 2007 data to assist in reconciling any differences and to help clarify the report. Amended, as used in this document log, refers to PCB waste that have had any status change such as; reporting requirements, PCB type, container number, weight, etc., during the calendar year.

Waste classifications at the Hanford Site are continuously being reviewed and updated based on new information, repackaging of waste, and changes in the regulations. The promulgation of the Disposal of Polychlorinated Biphenyls (PCBs) amendments in 1998 (63 FR 35384) resulted in some waste types previously reportable under TSCA being revised to non-reportable (examples include certain PCB bulk product waste, certain non-liquid cleaning materials and waste from personal protective equipment, and certain PCB-contaminated articles). Current regulations are applied as new waste comes into storage, and over time, to affected waste that has been in storage since before the promulgations. In addition, waste is repackaged resulting in changes in container numbers and in PCB waste weights.

7.0 SUMMARY - ACTIVITIES AT THE LOW-LEVEL BURIAL GROUND (218-W-5) DURING CY 2007

This page intentionally left blank

SUMMARY

ACTIVITIES AT THE LOW-LEVEL BURIAL GROUND (218-W-5)

The 218-W-5 Burial Ground located in the Low-Level Burial Ground is not an approved chemical waste landfill. Provisions in 40 CFR 761 allow disposal of certain specific ≥50 ppm PCB waste into RCRA Subtitle C landfills and landfills approved for disposal of radioactive waste per 40 CFR 761.50(b)(7). Therefore, while the Hanford facility does not have an EPA-approved chemical waste landfill, two onsite mixed waste disposal trenches, located in the 218-W-5 do accept TSCA regulated waste at 50 ppm or greater PCB. By letter dated April 30, 2002, EPA accepted a modified version of the "Notification of PCB Activity" Form 7701-53 that classified Hanford as an "approved disposer" with this specified condition.

Additional information on waste in storage at, or disposed into, the 218-W-5 Burial Ground during CY 2007 is provided in the detailed information following the Summary Radioactive PCB Waste Management Activities at the Hanford Site during CY 2007 section, under the heading "Stored at Facility 218W5".

9.0 DOCUMENTATION OF CONTINUING ATTEMPTS TO SECURE DISPOSAL OF PCB/RADIOACTIVE WASTE

DOCUMENTATION OF CONTINUING ATTEMPTS TO SECURE DISPOSAL OF PCB/RADIOACTIVE WASTE

For PCB/radioactive waste classified as low-level and mixed low-level (also containing Washington Administrative Code dangerous waste regulated constituents), current plans are to treat the waste using thermal destruction or, in specified cases, to dispose into a landfill. In late 2004, Hanford procured treatment services with two commercial waste treatment facilities (Pacific EcoSolutions and Perma-Fix Environmental) for the treatment of mixed low-level wastes including PCB bearing waste. (NOTE: During May 2007, Pacific EcoSolutions was bought out by Perma-Fix Environmental and the treatment contract was novated.) However, treatment of PCB-bearing mixed and low-level waste has not occurred under either of these treatment service contracts due to inability for the treatment facilities to secure the necessary permit approvals from the various regulating approvers. Treatment availability for this waste is not currently anticipated until fiscal year 2009.

Landfill disposal into a RCRA Subtitle C is considered when specifically allowed under 40 CFR 761. Provision in 40 CFR 761 allow disposal of certain specific ≥50 ppm PCB waste into RCRA Subtitle C landfills and landfills approved for disposal of radioactive waste per 40 CFR 761.50(b)(7). Therefore, while the Hanford facility does not have a EPA approved Chemical Waste Landfill, the on-site mixed waste disposal unit, 218-W-5, does accept TSCA regulated waste at 50 ppm or greater PCB that has a radioactive componant. By letter dated April 30, 2002, EPA accepted a modified version of the "Notification of PCB Activity" Form 7701-53 that classified Hanford as an "approved disposer" with this specified condition. Forty-one (41) containers of PCB/rad waste was disposed into the 218-W-5 during 2007.

For PCB/radioactive waste classified as Transuranic (TRU) waste, EPA approved the Waste Isolation Pilot Plant (WIPP) chemical waste landfill application to dispose of TRU and TRU-mixed (TRUM) waste containing PCBs pursuant to 40 CFR 761.75. Following the conditions in a Risk-Based Disposal Approval from 2005, a total of three hundred and thirty-two (332), 55-gallon containers of treated sludge form the K Basin North Load-Out Pit (NLOP) were generated. The NLOP sludge was a multi-phasic (mixture of liquid and non-liquid phases) PCB remediation waste. The waste was solidified to meet radiological treatment standards in preparation for disposal at WIPP. During 2007, the solidified NLOP waste underwent verification tests for acceptance at the WIPP facility. Also, during 2007, an RBDA was prepared requesting approval to process residual liquids in TRU and TRUM waste via absorption (including possibly adsorption). With EPA approval, this RBDA will allow processing of TRU waste for shipment to the WIPP facility for disposal. The RBDA was submitted to EPA/Region 10 via letter on December 14, 2007.

In June 2004, EPA Region 10 approved a Risk-Based Disposal Approval for management of certain aqueous PCBs at the 200 Areas Liquid Waste Processing Facility, including the reduction of waste at the 242-A Evaporator.

CH2M HILL Hanford Group is the Hanford Site's operator of the tank farms that are used to manage high-level radioactive wastes. This includes waste currently stored in 149 aging single-shell tanks (SST) and 27 double-shell tanks (DST). The wastes in the SSTs predate the April 18, 1978 TSCA effective date. It has been determined that some wastes in the DST farms contain small concentrations of PCB remediation waste and are subject to TSCA requirements. A "Framework Agreement for Management of Polychlorinated Biphenyls in Hanford Tank Waste," signed on August 31, 2000, resulted in EPA, the Washington State Department of Ecology, and the Department of Energy (DOE) and its Hanford Site contractors working together to resolve the regulatory issues associated with managing this PCB waste. Retrieval of waste from Hanford's 149 aging SSTs and subsequent closure of the tank systems is one of the most complex, technically challenging, and environmentally significant challenges remaining as part

of the cleanup and closure of the Hanford Federal Facility. It is anticipated that a portion of the tank farm waste will be treated at the Waste Treatment Plant (currently under construction at the Hanford site).

In the interim, as a means of minimizing the volume of additional liquids that must be managed in DSTs, DST supernatant was used to retrieve 64,700 gallons of waste from tanks 241-C-103 and 10,800 gallons of waste from tank 241-C-108. These activities were performed in accordance with EPA Phase I and II RBDA approval for use of the DST PCB remediation waste. Phase I identifies general conditions which apply to the overall strategy and retrieval process, and Phase II identifies tank specific conditions. Approvals have been received for eight tanks with four remaining tanks identified in the RBDA for which EPA approval has not been issued.
