SAF-RC-009

ERDF Leachate Tank, Summer 2016

Date: 17 August 2016

Project: ERDF Full List Leachate Analysis - July 2016

Subject: Radiochemistry & Hexavalent Chromium - Data Package No. J02198-TAL

INTRODUCTION

This memo presents the results of data validation on Data Package No. J02198 prepared by TestAmerica Laboratories (TAL). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

| Sample ID | Sample Date | Media | Validation | Analyte |
|-----------|-------------|-------|------------|------------|
| J1V931 | 07/20/16 | Water | C | See note 1 |
| J1V932 | 07/20/16 | Water | C | See note 1 |

1 - Gamma spectroscopy, carbon-14, Iodine-129, gross alpha/beta, total radium, total uranium, technetium-99, tritium, & Hexavalent Chromium.

Data validation was conducted in accordance with the validation procedures identified in the references and WCH-173, Rev. 2, "Environmental Restoration Disposal Facility Leachate Sampling and Analysis Plan". Appendices 1 through 6 provide the following information as indicated below:

- Appendix 1. Glossary of Data Reporting Qualifiers
- Appendix 2. Summary of Data Qualification
- Appendix 3. Annotated Laboratory Reports
- Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
- Appendix 5. Data Validation Supporting Documentation
- Appendix 6. Additional Data

DATA QUALITY PARAMETERS

Holding Times

Holding times are calculated from Chain-of-Custody forms to determine the validity of the results. The maximum holding time for radiochemical analysis is 6 months. The maximum holding time for hexavalent chromium in water is 24 hours.

All holding times were acceptable.

Preparation (Method) Blanks

Laboratory Blanks

Blank samples are analyzed to determine if positive results are due to laboratory reagent, sample container, or detector contamination. If blank analysis results indicate the presence of an analyte above the minimum detectable activity (MDA) or reporting limit (RL), the following qualifiers are applied: All positive sample results less than five times the highest blank concentration are qualified as estimates and flagged "J"; sample results below the MDA or RL are qualified as undetected and flagged "U"; sample

results above the MDA or RL and greater than five times the highest blank concentration are not qualified.

All laboratory blank results were acceptable.

Field (Equipment) Blank

No equipment blanks were submitted for analysis.

Accuracy

Accuracy is evaluated from laboratory control sample (LCS) or blank spike sample (BSS) batch samples and spiked samples from the analytical batch. Measured activities are compared to the known added amounts. The acceptable LCS recovery range is 70-130% and the acceptable matrix spike recovery is range 75-125%. For matrix spikes, if the concentration of the analyte is > 4 times the spike amount, no qualification for recovery outside the acceptance range is required. In addition, samples may be spiked with a carrier or radiochemical tracer to assist in isolating the radioisotope of interest with the yield of the tracer being used in calculating sample activity. The acceptable range for tracer recovery is 30% to 110%. The acceptable range for carrier recovery is 40% to 110%. Carrier or tracer recoveries greater than 110% are not qualified for non-detected results. Spike sample results outside the above ranges result in associated sample results being qualified as estimates, or not qualified, depending on the activity of the individual sample. Results are rejected for LCS/BSS recoveries of less than 30% and tracer recoveries of less than 20%, and tracer recoveries of greater than 115% for detected results.

Due to the lack of a matrix spike analysis, all tritium and carbon-14 results were qualified as estimates and flagged "J".

Due to the lack of an LCS analysis, all plutonium-238, thorium-228, and thorium-232 results were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

Laboratory Duplicates

Analytical precision is expressed by the relative percent differences (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample in the analytical batch. Precision may alternatively be assessed using unspiked duplicate analyses performed on a sample in the analytical batch. If both sample and replicate activities (concentrations) are greater than five times the contract required detection limit (CRDL) and the RPD is less than 20%, no qualification is required. If either activity (concentration) is less than five times the CRDL, the RPD control limit is less than or equal to two times the CRDL. If the RPD is outside the applicable control limit, associated results are qualified as estimated detects or estimated non-detects.

All laboratory duplicate results were acceptable.

Field Duplicates

Samples J1V931 and J1V932 are field duplicates.

The field RPD for Tc-99 was 22.8%. Under the validation guidelines, no qualification was required.

All other duplicate results were acceptable.

Detection Levels

Reported analytical detection levels for undetected analytes are compared against the remaining waste sites RQLs to ensure that laboratory detection levels meet the required criteria. All analytes met the RQL.

Completeness

Data package No.J02198 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to the lack of a matrix spike analysis, all tritium and carbon-14 results were qualified as estimates and flagged "J".
- Due to the lack of an LCS analysis, all plutonium-238, thorium-228, and thorium-232 results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH validation guidelines, the data may be used for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1
Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with validation protocols are as follows:

- U** - Indicates the compound or analyte was analyzed for and not detected above the minimum detectable activity (MDA) in the sample. The value reported is the sample result corrected for sample dilution and moisture content by the laboratory. The data is usable for decision making purposes.
- UJ** - Indicated the compound or analyte was analyzed for and not detected at concentrations above the minimum detectable activity (MDA) in the sample. Due to a minor quality control (QC) deficiency identified during the data validation, the associated quantitation limit is an estimate, but is useable for decision making purposes.
- J** - Indicated the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated concentration is an estimate, but the data are useable for decision making purposes.
- R** - Indicates the compound or analyte was analyzed for, detected, and due to an identified major ZQC deficiency, the data are unusable.
- UR** - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.

Appendix 2
Summary of Data Qualification

DATA QUALIFICATION SUMMARY

| | | | |

Comments

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information, analytical results and the appropriate associated statistical errors.

Receipt

The samples were received on 7/12/2016 3:15 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 8.3° C.

General Chemistry

Hexavalent Chromium by EPA method 7196A:

The LCS, batch blank, samples, sample duplicate and sample matrix spike results are within contractual requirements.

Certificate of Analysis

CASE NARRATIVE

I. Introduction

On July 12, 2016, two water samples were received at TestAmerica for radiochemical analysis. Upon receipt, the samples were assigned the following laboratory ID numbers to correspond with the Washington Closure Hanford (WCH) specific ID:

| <u>WCH ID#</u> | <u>TARL ID#</u> | <u>MATRIX</u> | <u>DATE OF RECEIPT</u> |
|----------------|-----------------|---------------|------------------------|
| J1V931 | M8XLQ | WATER | 7/12/16 |
| J1V932 | M8XLR | WATER | 7/12/16 |

II. Sample Receipt

The samples were received in good condition and no anomalies were noted during check-in.

III. Analytical Results/Methodology

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information, analytical results and the appropriate associated statistical errors.

The requested analyses were:

- Alpha Spectroscopy**
- Plutonium-238, -239/240 by method RL-ALP-001
- Thorium-228,230,232 by method RL-ALP-016
- Uranium 234, 235 and 238 by method RL-ALP-015

Gas Proportional Counting

Gross Alpha by method RL-GPC-001

Gross Beta by method RL-GPC-001

Strontium-90 by method RL-GPC-010

Total Radium by method RL-RA-002

Gamma Spectroscopy

Gamma Spec by method RL-GAM-001

Iodine-129 (LL) by method RL-GAM-002

Liquid Scintillation Counting

Technetium-99 by method RL-LSC-014

Tritium by method RL-LSC-005

Carbon-14 by method RL-LSC-008

Laser Induced Phosphorimetry

Total Uranium by method RL-KPA-003

IV. Quality Control

The analytical results for each analysis performed includes a minimum of one laboratory control sample (LCS), one method (reagent) blank, and one duplicate sample analysis. Any exceptions have been noted in the "Comments" section.

QC and sample results are reported in the same units.

V. Comments

Alpha Spectroscopy

Plutonium-238, -239/240 by method RL-ALP-001:

The LCS, batch blank, samples and sample duplicate (J1V931) results are within contractual requirements.

Thorium-228,230,232 by method RL-ALP-016:

The LCS, batch blank, samples and sample duplicate (J1V931) results are within contractual requirements.

Uranium 234, 235 and 238 by method RL-ALP-015:

The LCS, batch blank, samples and sample duplicate (J1V931) results are within contractual requirements.

Gas Proportional Counting

Gross Alpha by method RL-GPC-001:

The achieved MDA for the samples and sample duplicate (J1V931) exceeded the CRDL due to the aliquot reductions based on the weight screening results. The sample and sample duplicate (J1V931) agreement was not within the acceptance limits in the original count; they were recounted for an acceptable agreement. Except as noted; the LCS, batch blank, samples and sample duplicate (J1V931) results are within contractual requirements.

Gross Beta by method RL-GPC-001:

The achieved MDA for the samples and sample duplicate (J1V931) exceeded the CRDL due to the aliquot reductions based on the weight screening results. Except as noted; the LCS, batch blank, samples and sample duplicate (J1V931) results are within contractual requirements.

Washington Closure Hanford
August 15, 2016

Strontium-90 by method RL-GPC-010:

The LCS, batch blank, samples and sample duplicate (J1V932) results are within contractual requirements.

Total Alpha Radium by method RL-RA-002:

The LCS, batch blank, samples and sample duplicate (J1V931) results are within contractual requirements.

Gamma Spectroscopy

Gamma Spec by method RL-GAM-001:

The LCS, batch blank, samples and sample duplicate (J1V932) results are within contractual requirements.

Iodine-129 (II) by method RL-GAM-002:

The LCS, batch blank, samples and sample duplicate (J1V932) results are within contractual requirements.

Liquid Scintillation Counting

Technetium-99 by method RL-LSC-014:

The LCS, batch blank, samples, sample duplicate (J1V932) and sample matrix spike (J1V932) results are within contractual requirements.

Tritium by method RL-LSC-005:

The LCS, batch blank, samples and sample duplicate (J1V932) results are within contractual requirements.

Carbon-14 by method RL-LSC-008:

The LCS, batch blank, samples and sample duplicate (J1V932) results are within contractual requirements.

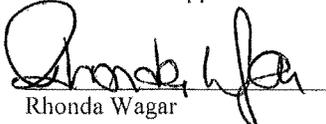

Total Uranium

Total Uranium by method RL-KPA-003:

The LCS, batch blank, samples, sample duplicate (J1V931) and sample matrix spike (J1V931) results are within contractual requirements.

I certify that this Certificate of Analysis is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager, or a designee as verified by the following signature.

Date: 22 August 2016
To: Washington Closure Hanford Inc. (technical representative)
From: ELR Consulting
Project: ERDF Leachate Tank Summer 2016
Subject: Pesticide/PCB - Data Package No. J02198-TAL

INTRODUCTION

This memo presents the results of data validation on Data Package No. J02198 prepared by TestAmerica Laboratories (TAL). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

| Sample ID | Sample Date | Media | Validation | Analyte |
|------------------|--------------------|--------------|-------------------|----------------|
| J1V931 | 7/12/16 | Water | C | See note 1 |
| J1V932 | 7/12/16 | Water | C | See note 1 |

1 – Pesticides by 8081B and PCBs by 8082.

Data validation was conducted in accordance with the WCH validation statement of work and WCH-173, Rev. 2, "Environmental Restoration Disposal Facility Leachate Sampling & Analysis Plan". Appendices 1 through 6 provide the following information as indicated below:

- Appendix 1. Glossary of Data Reporting Qualifiers
- Appendix 2. Summary of Data Qualification
- Appendix 3. Annotated Laboratory Reports
- Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
- Appendix 5. Data Validation Supporting Documentation
- Appendix 6. Additional Documentation Requested by Client

DATA QUALITY OBJECTIVES

Holding Times

Analytical holding times were assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Pesticide samples must be extracted within 14 days of the date of sample collection and analyzed within 40 days from the date of extraction. PCB samples must be analyzed within 180 days of sample collection.

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

All holding times were acceptable.

Method Blank

Method blank analyses are performed to determine the extent of laboratory contamination introduced through sampling, sample preparation or analysis. At least one method blank analysis must be conducted for every 20 samples. Method blanks should not contain target compounds at a concentration greater than required quantitation limit (RQL). If target compounds are present, sample results less than five times the blank concentration are qualified as undetected and flagged "U". If the sample result is less than five times the blank concentration and less than RQL, the result is qualified as undetected and elevated to the RQL.

All method blank results were acceptable.

Field Blanks

No field blanks were submitted for analysis.

Accuracy

Matrix Spike & Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 50% to 150%. If spike recoveries are outside control limits, detected sample results less than five times the spike concentration are qualified as estimates and flagged "J". Non-detected sample results with spike recoveries outside control limits are qualified as estimates and flagged "UJ". Sample results greater than five times the spike concentration require no qualification.

Due to LCS recoveries outside QC limits, all aldrin (34%) and heptachlor (45%) results were qualified as estimates and flagged "J".

Due to the lack of a matrix spike, matrix spike duplicate or LCS analysis, all toxaphene results were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

Surrogate Recovery

The analysis of surrogate compounds provides a measure of performance for individual samples. Matrix-specific surrogate compound recovery control windows have been

established by the laboratory. When a surrogate compound recovery is outside the control window, all positively identified target compounds associated with the unacceptable surrogate recoveries are qualified as estimates and flagged "J". Non-detected compounds with surrogate recoveries less than the lower control limit are qualified as having an estimated detection limit and flagged "UJ". Non-detected compounds with surrogate recoveries above the upper control limit require no qualification.

All surrogate results were acceptable.

Precision

Matrix Spike/Matrix Spike Duplicate Samples

Matrix spike/matrix spike duplicate results provide matrix-specific information on the precision of the method for specific target compound classes. Precision is expressed as the relative percent difference (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample. For soil samples, results must be within RPD limits of plus/minus 20%. If RPD values are out of specification and the sample concentration is less than five times the spike concentration, all associated detected sample results are qualified as estimates and flagged "J". If RPD values are out of specification and the sample concentration is greater than five times the spike concentration, no qualification is required.

Due to the lack of a matrix spike and matrix spike duplicate analysis, all toxaphene results were qualified as estimates and flagged "J".

All other precision results were acceptable.

Field Duplicate Samples

One set of field duplicates (J1V931/J1V932) were submitted for analysis. Field duplicates are compared using the same criteria as for laboratory duplicates. All field duplicate results were acceptable.

Analytical Detection Levels

Reported analytical detection levels are compared against the required detection limits (RDLs) to ensure that laboratory detection levels meet the required criteria. All results met the RDL.

Completeness

Data Package No. J02198 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to LCS recoveries outside QC limits, all aldrin (34%) and heptachlor (45%) results were qualified as estimates and flagged "J".
- Due to the lack of a matrix spike, matrix spike duplicate or LCS analysis, all toxaphene results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1
Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with the procedures herein are as follows:

- U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.
- UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.
- J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.
- R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.
- UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.
- NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).
- N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Appendix 2
Summary of Data Qualification

PESTICIDE/PCB DATA QUALIFICATION SUMMARY*

| | | | |
|----------------------|--------------------------|-------------------------|------------------------|
| SDG: J02198 | REVIEWER: ELR | Project: ERDF | PAGE_1_OF_1 |
| COMPOUND | QUALIFIER | SAMPLES AFFECTED | REASON |
| Aldrin heptachlor | J | All | LCS recovery |
| Toxaphene | J | All | No MS, MSD analysis |

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

The Uranium method substitution noted above, as agreed to by all parties, has no technical impact on the data.

I certify that this data package is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed in this Case Narrative. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or a designee, as verified by the signature on the Report Cover.

With exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. All laboratory quality control samples analyzed in conjunction with the samples in this project were within established control limits, with any exceptions noted. Calculations are performed before rounding to avoid round-off errors in calculated results.

This report includes reporting limits (RLs) less than TestAmerica Denver's practical quantitation limits. These reporting limits are being used specifically at the client's request to meet the needs of this project. Please note that data are not normally reported to these levels without qualification, since they are inherently less reliable and potentially less defensible than required by the current NELAC standards.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 7/13/2016 9:30 AM and 7/14/2016 9:25 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 4 coolers at receipt time were 1.7° C, 2.9° C, 3.4° C and 4.9° C.

Receipt Exceptions

It was noted that the VOA vials did not have labels affixed to them. There was one label for each set of VOA vials that was affixed to the bubble bag. Each label was transferred to one of the vials in each set. The client was notified on 7/15/2016.

GC/MS VOLATILES - SW846 8260B

The following compounds were not found as part of a TIC search performed for samples J1V931, J1V932 and J1V933: Acrylamide [79-06-1]; Formaldehyde [50-00-0]; 1,3-Butadiene [106-99-0]; Chlorodifluoromethane [75-45-6]; Dichloropropanol [26545-73-3]; Trichloromethanethiol [75-70-7]; Allyl alcohol (2-Propen-1-ol) [107-18-6]; Crotonaldehyde (2-Butenaldehyde) [4170-30-3]; Epichlorohydrin [106-89-8].

The GC/MS Volatiles analyses of samples J1V932 and J1V933 were performed 3 days outside the recommended sample holding times, due to analyst oversight. The client was notified on 8/2/2016.

The preservative used in the sample containers provided is not compatible with one of the Method 8260B analytes requested. Samples J1V931, J1V932 and J1V933 were received preserved with hydrochloric acid. The requested target analyte list includes 2-chloroethyl vinyl ether, an acid-labile compound that degrades in an acidic medium.

Methylene Chloride, a common laboratory contaminant, is present in the method blank associated with batch 280-334916 at a level exceeding the reporting limit. Because this common laboratory contaminant is present in the method blank at a level that is less than five times the reporting limit, corrective action is not required.

Low levels of Methylene chloride, a common laboratory contaminant, are present in the method blank associated with batch 280-335637. Because the concentration in the method blank is not present at a level greater than the reporting limit, corrective action is deemed unnecessary.

The LCS associated with batch 280-334916 exhibited the percent recovery outside the control limits, biased high, for Methylene Chloride, and the associated sample result has been flagged "T". As Methylene Chloride is not present at a level greater than the reporting limit in the associated sample, corrective action is deemed unnecessary.

2-Chloroethyl vinyl ether was not recovered in the MS/MSD performed on sample J1V931 in batch 280-334916 due to the acid preservative used in the sample. The acceptable LCS analysis data indicated that the analytical system was operating within control; therefore, corrective action is deemed unnecessary.

Due to analyst oversight, MS/MSD analysis was not performed for batch 280-335637. Method precision and accuracy have been verified by the acceptable LCS/LCSD analysis data.

A Continuing Calibration Verification (CCV) standard associated with samples in batch 280-334916 exhibited the %Difference (%D) value outside acceptance criteria, biased low, for 1-Butanol (-50.2%). The sample associated with this CCV was non-detect for the affected analyte. All CCC and SPCC compounds are in control; therefore, method criteria have been met and corrective action is deemed unnecessary.

No other anomalies were encountered.

GC/MS SEMIVOLATILES - SW846 8270C

The following compounds were not found as part of a TIC search performed for samples J1V931 and J1V932: 1-Acetyl-2-thiourea [591-08-2]; 2,5-Diaminotoluene [95-70-5]; 2-Cyclohexyl-4,6-dinitrophenol [131-89-5]; Hexachlorophene [70-30-4].

Low levels of Benzyl alcohol are present in the method blank associated with batch 280-334208. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary. Associated sample results present above the MDL and/or RL have been flagged with a "B".

A Continuing Calibration Verification (CCV) standard associated with samples in analysis batch 280-335194 exhibited the %Difference (%D) value outside acceptance criteria, biased low, for 4-Nitroquinoline-1-oxide (-50.1%). The samples associated with this CCV were non-detect for the affected analyte. All CCC and SPCC compounds are in control; therefore, method criteria have been met and corrective action is deemed unnecessary.

No other anomalies were encountered.

GLYCOLS - SW846 8015C

Surrogate 1,4-Butanediol was recovered outside the control limits, biased low, in samples J1V931 and J1V932. The laboratory noted that this anomaly was due to obvious matrix interference; therefore, corrective action is deemed unnecessary.

No other anomalies were encountered.

METHANOL - SW846 8015C

No anomalies were encountered.

GRO - NWTPH-Gx

The samples were collected in properly preserved vials for analysis of gasoline range organics (GRO). However, when verified by the laboratory, the pH was greater than 2 and the following sample was analyzed after 7 days from sampling: J1V932 (pH = 7).

No other anomalies were encountered.

PESTICIDES - SW846 8081A

The LCS associated with batch 280-334134 exhibited percent recoveries outside the control limits, biased low, as follows: 4,4'-DDE = 72% (lower limit 74), Aldrin = 34% (lower limit 44), Heptachlor = 45% (lower limit 52). Associated sample results have been flagged with an "N". It can be noted that the spike compound recoveries and surrogate recoveries for the MS/MSD performed on sample J1V931 were in control. The laboratory re-extracted the samples, unavoidably 14 days past the 7 day recommended sample holding time. Upon re-extraction and reanalysis of the samples under batch 280-336109, the associated LCS spike compound recoveries were 100% in control, and the non-detect results were confirmed. The original analysis data have been reported as the non-detect sample results were confirmed.

No other anomalies were encountered.

PCBs - SW846 8082

No anomalies were encountered.

HERBICIDES - SW846 8151A

No anomalies were encountered.

DRO - NWTPH-Dx

Low levels of C10-C36 are present in the method blank associated with batch 280-334141. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary.

No other anomalies were encountered.

PAHs - SW846 8310

Surrogate Terphenyl-d14 recovered outside the control limits, biased low at 67% (lower limit 70%), in sample J1V931. No evidence of matrix interference was present and the sample was non-detect. It can be noted that the spike compound recoveries and surrogate recoveries for the MS/MSD performed on sample J1V931 were in control. The laboratory re-extracted the sample, unavoidably 13 days past the 7 day recommended sample holding time, and the surrogate was in control at 94% and the non-detect results were confirmed. Due to insufficient sample volume remaining, sample specific MS/MSD analysis could not be performed for the re-extract batch. The original analysis data have been reported as the non-detect sample results were confirmed and the sample specific batch MS/MSD was associated with the original analysis.

No other anomalies were encountered.

TOTAL METALS - SW846 6010B/6020/7470A

Serial dilution of a digestate in batch 280-334811 indicates that physical and chemical interferences are present for Uranium. Results have been flagged with an "X".

Low levels of Thallium are present in the method blank associated with batch 280-334811. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary.

It can be noted that the sample amount was greater than four times the spike amount for Calcium and Uranium in the Matrix Spike performed on sample J1V931; therefore, control limits are not applicable.

The duplicate analysis of sample J1V931 exhibited RPD data outside the control limits for Thallium, and the associated sample result has been flagged "M". There is no indication that the analytical system was operating out of control, and method accuracy has been verified by the acceptable LCS analysis data; therefore, corrective action is deemed unnecessary.

No other anomalies were encountered.

OIL & GREASE (HEM) - EPA 1664A

No anomalies were encountered.

ANIONS - MCAWW 300.0

The orthophosphate as P analyses for samples J1V931 and J1V932 were performed 8-9 hours outside the recommended 48 hour sample holding times. The analyses were originally performed within the sample holding times; however, due to associated continuing calibration verification (CCV) failures, reanalysis was required.

Each sample is analyzed to achieve the lowest possible reporting limits within the constraints of the method. Due to high constituent concentration, samples J1V931 and J1V932 required dilutions prior to the analysis of Nitrate as N, Chloride and Sulfate, and the associated results have been flagged with a "D". The reporting limits have been adjusted relative to the dilutions required.

The orthophosphate as P Matrix Spike performed on sample J1V931 exhibited the percent recovery outside the control limits, and the associated sample result has been flagged "N". There is no indication that the analytical system was operating out of control, and method accuracy has been verified by the acceptable LCS analysis data; therefore, corrective action is deemed unnecessary.

No other anomalies were encountered.

AMMONIA as N - MCAWW 350.1

No anomalies were encountered.

NITRATE NITRITE as N - MCAWW 353.2

Each sample is analyzed to achieve the lowest possible reporting limit within the constraints of the method. Due to high constituent concentration, samples J1V931 and J1V932 had to be analyzed at dilutions, and the associated results have been flagged with a "D". The reporting limits have been adjusted relative to the dilutions required.

The Matrix Spike performed on sample J1V931 exhibited the percent recovery outside the control limits, and the associated sample result has been flagged "N". There is no indication that the analytical system was operating out of control, and method accuracy has been verified by the acceptable LCS analysis data; therefore, corrective action is deemed unnecessary.

No other anomalies were encountered.

CHEMICAL OXYGEN DEMAND - MCAWW 410.4

No anomalies were encountered.

PHENOLICS - MCAWW 420.4

Phenolics are present at a level greater than half the reporting limit in the method blank associated with batch 280-335552. As no detectable concentrations of Phenolics are present in the associated samples, corrective action is deemed unnecessary.

No other anomalies were encountered.

TOTAL CYANIDE - SW846 9012A

Low levels of Total Cyanide are present in the method blank associated with batch 280-334663. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary.

No other anomalies were encountered.

TOTAL ORGANIC HALOGENS (TOX) - SW846 9020B

The laboratory noted that the containers submitted for samples J1V931 and J1V932 were received with excess headspace. This could cause volatile halides to evaporate, resulting in a low bias to the reported results.

Samples J1V931 and J1V932 exhibited elevated detection limits due to the limited sample volume used. The nominal sample amount could not be used due to the nature of the sample matrix.

No other anomalies were encountered.

SULFIDE - SW846 9034

No anomalies were encountered.

ALKALINITY - SM 2320B

Low levels of Alkalinity are present in the method blank associated with batch 280-333888. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary.

No other anomalies were encountered.

TOTAL DISSOLVED SOLIDS - SM 2540C

Samples J1V931 and J1V932 exhibited elevated detection limits due to the limited sample volume used. The nominal sample amount could not be used due to high constituent concentration.

No other anomalies were encountered.

TOTAL SUSPENDED SOLIDS - SM 2540D

No anomalies were encountered.

TOTAL ORGANIC CARBON - SM 5310B

No anomalies were encountered.

PH - SW846 9040B

SU = standard units

Samples J1V931 and J1V932 were analyzed 14 days after sample receipt, due to analyst oversight. It can be noted that pH is a field parameter with a holding time of 15 minutes.

No other anomalies were encountered.

SPECIFIC CONDUCTANCE - SW846 9050A

No anomalies were encountered.

Project: ERDF Leachate Tank Summer 2016
Subject: Semivolatile - Data Package No. J02198-TAL

INTRODUCTION

This memo presents the results of data validation on Summary Data Package No. J02198 prepared by TestAmerica Inc. (TAL). A list of the samples validated along with the analyses reported and the method of analysis is provided in the following table.

| Sample ID | Sample Date | Media | Validation | Analyte |
|------------------|--------------------|--------------|-------------------|----------------|
| J1V931 | 7/12/16 | Water | C | See note 1 |
| J1V932 | 7/12/16 | Water | C | See note 1 |

1 – Semivolatile organics by 8270B.

Data validation was conducted in accordance with the WCH validation statement of work and WCH-173, Rev. 2, "Environmental Restoration Disposal Facility Leachate Sampling & Analysis Plan". Appendices 1 through 6 provide the following information as indicated below:

- Appendix 1. Glossary of Data Reporting Qualifiers
- Appendix 2. Summary of Data Qualification
- Appendix 3. Annotated Laboratory Reports
- Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
- Appendix 5. Data Validation Supporting Documentation
- Appendix 6. Additional Documentation Requested by Client

DATA QUALITY OBJECTIVES

• Holding Times & Sample Preservation

Analytical holding times are assessed to ascertain whether the holding time requirements were met by the laboratory. Samples must be prepared within 14 days and analyzed within 40 days.

If holding times are exceeded, but not by greater than twice the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than twice the limit, all associated detected sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

All holding times were acceptable.

- **Blanks**

Method blank analyses are conducted to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples of a given matrix. No contaminants should be present in the method blank. Analytical results for analytes present in any sample at less than five times the concentration of that analyte found in the associated blank are qualified as estimated and flagged "UJ".

Due to method blank contamination, all benzyl alcohol results were qualified as undetected and flagged "U".

All other method blank results were acceptable.

Field Blanks

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike/Matrix Spike Duplicate & Laboratory Control Sample

Matrix spike/matrix spike duplicate and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike/matrix spike duplicate is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Matrix spike/matrix spike duplicate analyses are performed in duplicate using the target compounds for which percent recoveries must be within established laboratory quality control limits. If spike recoveries are outside control limits (50-150% or w/in laboratory specified limits), detected sample results less than five times the spike concentration are qualified as estimates and flagged "J". Undetected sample results with spike recoveries outside control limits are qualified as estimates and flagged "UJ". Sample results greater than five times the spike concentration require no qualification.

Due to an LCS recovery outside QC limits (33%), all hexachlorocyclopentadiene results were qualified as estimates and flagged "J".

Due to an MS and MSD recoveries outside QC limits (31% & 32%), all hexachlorocyclopentadiene results were qualified as estimates and flagged "J".

Due to a matrix spike and matrix spike duplicate results outside QC limits (22% & 36%), all 3,3-dichlorobenzidine results were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

Surrogate Recovery

The analyses of surrogate compounds provide a measure of performance for individual samples. Matrix-specific surrogate compound recovery control windows have been established by the EPA CLP program. If two surrogates of the same class of compounds (base/neutral or acid) are out of control limits, all associated sample results greater than the contract required quantitation limit (CRQL) are qualified as estimates and flagged "J". Sample results less than the CRQL and below the lower control limit are qualified as estimates and flagged "UJ". Sample results less than the CRQL with recoveries above the upper control limit require no qualification. If a surrogate recovery is less than 10%, detects are qualified as estimates and flagged "J" and nondetects are rejected and flagged "UR".

All surrogate results were acceptable.

• Precision

Matrix Spike/Matrix Spike Duplicate Samples

Matrix spike/matrix spike duplicate results provide matrix-specific information on the precision of the method for specific target compound classes. Precision is expressed by the relative percent difference (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample. For samples analyzed using SW-846 protocol, results must be within RPD limits of +/- 20% for water samples and +/- 35% for solid samples. If RPD values are out of specification and the sample concentration is less than five times the spike concentration, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If RPD values are out of specification and the sample concentration is greater than five times the spike concentration, no qualification is required.

Due to an RPD outside QC limits (46%), all 3,3-dichlorobenzidine results were qualified as estimates and flagged "J".

All other precision results were acceptable.

Field Duplicate Samples

One set field duplicates (J1V931/J1V932) were submitted for analysis. Field duplicates are compared using the same criteria as for laboratory duplicates. All duplicate results were acceptable.

· **Analytical Detection Levels**

Reported analytical detection levels are compared against the required detection limits (RDLs) to ensure that laboratory detection levels meet the required criteria. All results met the RDL.

· **Completeness**

Data package No. J02198 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to method blank contamination, all benzyl alcohol results were qualified as undetected and flagged "U".
- Due to an LCS recovery outside QC limits (33%), all hexachlorocyclopentadiene results were qualified as estimates and flagged "J".
- Due to a matrix spike and matrix spike duplicate results outside QC limits (22% & 36%), all 3,3-dichlorobenzidine results were qualified as estimates and flagged "J".
- Due to an MS and MSD recoveries outside QC limits (31% & 32%), all hexachlorocyclopentadiene results were qualified as estimates and flagged "J".
- Due to an RPD outside QC limits (46%), all 3,3-dichlorobenzidine results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1
Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validator in compliance with the WCH validation SOW are as follows:

- U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for dilution and moisture content by the laboratory.
- UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.
- J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.
- R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.
- UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.
- NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).
- N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Appendix 2
Summary of Data Qualification

SEMIVOLATILE ORGANIC DATA QUALIFICATION SUMMARY*

| | | | |
|---------------------------|--------------------------|-------------------------|----------------------------------|
| SDG: J02198 | REVIEWER: ELR | Project: ERDF | PAGE <u>1</u> OF <u>1</u> |
| COMPOUND | QUALIFIER | SAMPLES AFFECTED | REASON |
| Benzyl alcohol | U | All | Method blank contamination |
| Hexachlorocyclopentadiene | J | All | LCS & MS recovery |
| 3,3-dichlorobenzidine | J | All | MS & MSD |
| 3,3-dichlorobenzidine | J | All | RPD |

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

The Uranium method substitution noted above, as agreed to by all parties, has no technical impact on the data.

I certify that this data package is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed in this Case Narrative. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or a designee, as verified by the signature on the Report Cover.

With exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. All laboratory quality control samples analyzed in conjunction with the samples in this project were within established control limits, with any exceptions noted. Calculations are performed before rounding to avoid round-off errors in calculated results.

This report includes reporting limits (RLs) less than TestAmerica Denver's practical quantitation limits. These reporting limits are being used specifically at the client's request to meet the needs of this project. Please note that data are not normally reported to these levels without qualification, since they are inherently less reliable and potentially less defensible than required by the current NELAC standards.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 7/13/2016 9:30 AM and 7/14/2016 9:25 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 4 coolers at receipt time were 1.7° C, 2.9° C, 3.4° C and 4.9° C.

Receipt Exceptions

It was noted that the VOA vials did not have labels affixed to them. There was one label for each set of VOA vials that was affixed to the bubble bag. Each label was transferred to one of the vials in each set. The client was notified on 7/15/2016.

GC/MS VOLATILES - SW846 8260B

The following compounds were not found as part of a TIC search performed for samples J1V931, J1V932 and J1V933: Acrylamide [79-06-1]; Formaldehyde [50-00-0]; 1,3-Butadiene [106-99-0]; Chlorodifluoromethane [75-45-6]; Dichloropropanol [26545-73-3]; Trichloromethanethiol [75-70-7]; Allyl alcohol (2-Propen-1-ol) [107-18-6]; Crotonaldehyde (2-Butenaldehyde) [4170-30-3]; Epichlorohydrin [106-89-8].

The GC/MS Volatiles analyses of samples J1V932 and J1V933 were performed 3 days outside the recommended sample holding times, due to analyst oversight. The client was notified on 8/2/2016.

The preservative used in the sample containers provided is not compatible with one of the Method 8260B analytes requested. Samples J1V931, J1V932 and J1V933 were received preserved with hydrochloric acid. The requested target analyte list includes 2-chloroethyl vinyl ether, an acid-labile compound that degrades in an acidic medium.

Methylene Chloride, a common laboratory contaminant, is present in the method blank associated with batch 280-334916 at a level exceeding the reporting limit. Because this common laboratory contaminant is present in the method blank at a level that is less than five times the reporting limit, corrective action is not required.

Low levels of Methylene chloride, a common laboratory contaminant, are present in the method blank associated with batch 280-335637. Because the concentration in the method blank is not present at a level greater than the reporting limit, corrective action is deemed unnecessary.

The LCS associated with batch 280-334916 exhibited the percent recovery outside the control limits, biased high, for Methylene Chloride, and the associated sample result has been flagged "T". As Methylene Chloride is not present at a level greater than the reporting limit in the associated sample, corrective action is deemed unnecessary.

2-Chloroethyl vinyl ether was not recovered in the MS/MSD performed on sample J1V931 in batch 280-334916 due to the acid preservative used in the sample. The acceptable LCS analysis data indicated that the analytical system was operating within control; therefore, corrective action is deemed unnecessary.

Due to analyst oversight, MS/MSD analysis was not performed for batch 280-335637. Method precision and accuracy have been verified by the acceptable LCS/LCSD analysis data.

A Continuing Calibration Verification (CCV) standard associated with samples in batch 280-334916 exhibited the %Difference (%D) value outside acceptance criteria, biased low, for 1-Butanol (-50.2%). The sample associated with this CCV was non-detect for the affected analyte. All CCC and SPCC compounds are in control; therefore, method criteria have been met and corrective action is deemed unnecessary.

No other anomalies were encountered.

GC/MS SEMIVOLATILES - SW846 8270C

The following compounds were not found as part of a TIC search performed for samples J1V931 and J1V932: 1-Acetyl-2-thiourea [591-08-2]; 2,5-Diaminotoluene [95-70-5]; 2-Cyclohexyl-4,6-dinitrophenol [131-89-5]; Hexachlorophene [70-30-4].

Low levels of Benzyl alcohol are present in the method blank associated with batch 280-334208. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary. Associated sample results present above the MDL and/or RL have been flagged with a "B".

A Continuing Calibration Verification (CCV) standard associated with samples in analysis batch 280-335194 exhibited the %Difference (%D) value outside acceptance criteria, biased low, for 4-Nitroquinoline-1-oxide (-50.1%). The samples associated with this CCV were non-detect for the affected analyte. All CCC and SPCC compounds are in control; therefore, method criteria have been met and corrective action is deemed unnecessary.

No other anomalies were encountered.

GLYCOLS - SW846 8015C

Surrogate 1,4-Butanediol was recovered outside the control limits, biased low, in samples J1V931 and J1V932. The laboratory noted that this anomaly was due to obvious matrix interference; therefore, corrective action is deemed unnecessary.

No other anomalies were encountered.

METHANOL - SW846 8015C

No anomalies were encountered.

GRO - NWTPH-Gx

The samples were collected in properly preserved vials for analysis of gasoline range organics (GRO). However, when verified by the laboratory, the pH was greater than 2 and the following sample was analyzed after 7 days from sampling: J1V932 (pH = 7).

No other anomalies were encountered.

PESTICIDES - SW846 8081A

The LCS associated with batch 280-334134 exhibited percent recoveries outside the control limits, biased low, as follows: 4,4'-DDE = 72% (lower limit 74), Aldrin = 34% (lower limit 44), Heptachlor = 45% (lower limit 52). Associated sample results have been flagged with an "N". It can be noted that the spike compound recoveries and surrogate recoveries for the MS/MSD performed on sample J1V931 were in control. The laboratory re-extracted the samples, unavoidably 14 days past the 7 day recommended sample holding time. Upon re-extraction and reanalysis of the samples under batch 280-336109, the associated LCS spike compound recoveries were 100% in control, and the non-detect results were confirmed. The original analysis data have been reported as the non-detect sample results were confirmed.

No other anomalies were encountered.

PCBs - SW846 8082

No anomalies were encountered.

HERBICIDES - SW846 8151A

No anomalies were encountered.

DRO - NWTPH-Dx

Low levels of C10-C36 are present in the method blank associated with batch 280-334141. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary.

No other anomalies were encountered.

PAHs - SW846 8310

Surrogate Terphenyl-d14 recovered outside the control limits, biased low at 67% (lower limit 70%), in sample J1V931. No evidence of matrix interference was present and the sample was non-detect. It can be noted that the spike compound recoveries and surrogate recoveries for the MS/MSD performed on sample J1V931 were in control. The laboratory re-extracted the sample, unavoidably 13 days past the 7 day recommended sample holding time, and the surrogate was in control at 94% and the non-detect results were confirmed. Due to insufficient sample volume remaining, sample specific MS/MSD analysis could not be performed for the re-extract batch. The original analysis data have been reported as the non-detect sample results were confirmed and the sample specific batch MS/MSD was associated with the original analysis.

No other anomalies were encountered.

TOTAL METALS - SW846 6010B/6020/7470A

Serial dilution of a digestate in batch 280-334811 indicates that physical and chemical interferences are present for Uranium. Results have been flagged with an "X".

Low levels of Thallium are present in the method blank associated with batch 280-334811. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary.

It can be noted that the sample amount was greater than four times the spike amount for Calcium and Uranium in the Matrix Spike performed on sample J1V931; therefore, control limits are not applicable.

The duplicate analysis of sample J1V931 exhibited RPD data outside the control limits for Thallium, and the associated sample result has been flagged "M". There is no indication that the analytical system was operating out of control, and method accuracy has been verified by the acceptable LCS analysis data; therefore, corrective action is deemed unnecessary.

No other anomalies were encountered.

OIL & GREASE (HEM) - EPA 1664A

No anomalies were encountered.

ANIONS - MCAWW 300.0

The orthophosphate as P analyses for samples J1V931 and J1V932 were performed 8-9 hours outside the recommended 48 hour sample holding times. The analyses were originally performed within the sample holding times; however, due to associated continuing calibration verification (CCV) failures, reanalysis was required.

Each sample is analyzed to achieve the lowest possible reporting limits within the constraints of the method. Due to high constituent concentration, samples J1V931 and J1V932 required dilutions prior to the analysis of Nitrate as N, Chloride and Sulfate, and the associated results have been flagged with a "D". The reporting limits have been adjusted relative to the dilutions required.

The orthophosphate as P Matrix Spike performed on sample J1V931 exhibited the percent recovery outside the control limits, and the associated sample result has been flagged "N". There is no indication that the analytical system was operating out of control, and method accuracy has been verified by the acceptable LCS analysis data; therefore, corrective action is deemed unnecessary.

No other anomalies were encountered.

AMMONIA as N - MCAWW 350.1

No anomalies were encountered.

NITRATE NITRITE as N - MCAWW 353.2

Each sample is analyzed to achieve the lowest possible reporting limit within the constraints of the method. Due to high constituent concentration, samples J1V931 and J1V932 had to be analyzed at dilutions, and the associated results have been flagged with a "D". The reporting limits have been adjusted relative to the dilutions required.

The Matrix Spike performed on sample J1V931 exhibited the percent recovery outside the control limits, and the associated sample result has been flagged "N". There is no indication that the analytical system was operating out of control, and method accuracy has been verified by the acceptable LCS analysis data; therefore, corrective action is deemed unnecessary.

No other anomalies were encountered.

CHEMICAL OXYGEN DEMAND - MCAWW 410.4

No anomalies were encountered.

PHENOLICS - MCAWW 420.4

Phenolics are present at a level greater than half the reporting limit in the method blank associated with batch 280-335552. As no detectable concentrations of Phenolics are present in the associated samples, corrective action is deemed unnecessary.

No other anomalies were encountered.

TOTAL CYANIDE - SW846 9012A

Low levels of Total Cyanide are present in the method blank associated with batch 280-334663. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary.

No other anomalies were encountered.

TOTAL ORGANIC HALOGENS (TOX) - SW846 9020B

The laboratory noted that the containers submitted for samples J1V931 and J1V932 were received with excess headspace. This could cause volatile halides to evaporate, resulting in a low bias to the reported results.

Samples J1V931 and J1V932 exhibited elevated detection limits due to the limited sample volume used. The nominal sample amount could not be used due to the nature of the sample matrix.

No other anomalies were encountered.

SULFIDE - SW846 9034

No anomalies were encountered.

ALKALINITY - SM 2320B

Low levels of Alkalinity are present in the method blank associated with batch 280-333888. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary.

No other anomalies were encountered.

TOTAL DISSOLVED SOLIDS - SM 2540C

Samples J1V931 and J1V932 exhibited elevated detection limits due to the limited sample volume used. The nominal sample amount could not be used due to high constituent concentration.

No other anomalies were encountered.

TOTAL SUSPENDED SOLIDS - SM 2540D

No anomalies were encountered.

TOTAL ORGANIC CARBON - SM 5310B

No anomalies were encountered.

PH - SW846 9040B

SU = standard units

Samples J1V931 and J1V932 were analyzed 14 days after sample receipt, due to analyst oversight. It can be noted that pH is a field parameter with a holding time of 15 minutes.

No other anomalies were encountered.

SPECIFIC CONDUCTANCE - SW846 9050A

No anomalies were encountered.

- Transcription/calculation errors? Yes No N/A

Comments: _____

7. HOLDING TIMES (all levels)

- Samples properly preserved? Yes No N/A
- Sample holding times acceptable? Yes No N/A

Comments: _____

GC/MS ORGANIC DATA VALIDATION CHECKLIST

8. COMPOUND IDENTIFICATION, QUANTITATION, AND DETECTION LIMITS (all levels)

- Compound identification acceptable? (Levels D, E) Yes No N/A
- Compound quantitation acceptable? (Levels D, E) Yes No N/A
- Results reported for all requested analyses? Yes No N/A
- Results supported in the raw data? (Levels D, E) Yes No N/A
- Samples properly prepared? (Levels D, E) Yes No N/A
- Laboratory properly identified and coded all TIC? (Levels D, E) Yes No N/A
- Detection limits meet RDL? Yes No N/A
- Transcription/calculation errors? (Levels D, E) Yes No N/A

Comments: _____

9. SAMPLE CLEANUP (Levels D and E)

- GPC cleanup performed? Yes No N/A
- GPC check performed? Yes No N/A
- GPC check recoveries acceptable? Yes No N/A
- GPC calibration performed? Yes No N/A
- GPC calibration check performed? Yes No N/A
- GPC calibration check retention times acceptable? Yes No N/A
- Check/calibration materials traceable? Yes No N/A
- Check/calibration materials Expired? Yes No N/A
- Analytical batch QC given similar cleanup? Yes No N/A
- Transcription/Calculation Errors? Yes No N/A

INTRODUCTION

This memo presents the results of data validation on Summary Data Package No. J02198 prepared by TestAmerica Inc. (TAL). A list of the samples validated along with the analyses reported and the method of analysis is provided in the following table.

| Sample ID | Sample Date | Media | Validation | Analyte |
|------------------|--------------------|--------------|-------------------|----------------|
| J1V931 | 7/12/16 | Water | C | See note 1 |

1 - ICP metals by 6010B.

Data validation was conducted in accordance with the WCH validation statement of work and WCH-173, Rev. 2. "Environmental Restoration Disposal Facility Leachate Sampling and Analysis Plan". Appendices 1 through 6 provide the following information as indicated below:

- Appendix 1. Glossary of Data Reporting Qualifiers
- Appendix 2. Summary of Data Qualification
- Appendix 3. Annotated Laboratory Reports
- Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
- Appendix 5. Data Validation Supporting Documentation
- Appendix 6. Additional Documentation Requested by Client

DATA QUALITY OBJECTIVES

· Holding Times & Sample Preservation

Analytical holding times for ICP metals are assessed to ascertain whether the holding time requirements were met by the laboratory. The holding time requirements are as follows: Samples must be analyzed within six (6) months for ICP metals.

All holding times were met.

Blanks

Preparation (Method) Blanks

At least one preparation blank, consisting of deionized distilled water processed through each sample preparation and analysis procedure, must be prepared and analyzed with every sample delivery group. In the case of positive blank results, samples with digestate concentrations (in ug/L) less than five times the preparation blank value have had their associated values qualified as non-detected and flagged "U". Samples with concentrations of greater than five times the highest blank concentration do not require qualification.

In the case of negative blank results, if the absolute value exceeds the Contract Required Detection Limit (CRDL), all nondetects are rejected and flagged "UR" and all detects that are less than ten times the absolute value of the associated preparation blank result are qualified as estimates and flagged "J". If the absolute value of the negative preparation blank is greater than the IDL and less than or equal to the CRDL, all nondetects are qualified as estimates and flagged "UJ" and all detects less than ten times the absolute value of the blank are qualified as estimates and flagged "J". If the sample results are greater than ten times the absolute value of the preparation blank, no qualification is necessary.

Due to method blank contamination, all thallium results were qualified as undetected and flagged "UJ".

All other preparation blank results were acceptable.

Field Blanks

No field blanks were submitted for analysis.

Accuracy

Matrix Spike and Laboratory Control Sample

Matrix spike (MS) and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Recoveries must fall within the range of 75% to 125%. Samples with a recovery of less than 25% and a sample result below the instrument detection limit (IDL) are rejected and flagged "UR". Samples with a recovery of 30% to 74% and a sample result less than the IDL are qualified "UJ". Samples with a recovery of greater than 125% or less than 75% and a sample result greater than the IDL are qualified as estimates and flagged "J". Finally, for samples with a spike recovery greater than 125% and a sample result less than the IDL, no qualification is required.

All accuracy results were acceptable.

- **Precision**

Laboratory Duplicate Samples

Laboratory duplicate sample analyses are used to measure laboratory precision and sample homogeneity. Results must be within relative percent difference (RPD) limits of plus or minus 20% for water samples. If RPD values are out of specification and the sample concentration is greater than five times the CRDL, all associated sample results are qualified as estimated and flagged "J". The performance criteria for aqueous laboratory duplicates are an RPD less than 20% for positive sample results greater than five times the CRDL or plus or minus the CRDL for positive sample results less than five times the CRDL. Sample results outside the criteria are qualified as estimates and flagged "J/UJ".

All laboratory duplicate results were acceptable.

Field Duplicate Samples

One set field duplicates (J1V931/J1V932) were submitted for analysis. Field duplicates are compared using the same criteria as for laboratory duplicates. All duplicate results were acceptable.

- **Analytical Detection Levels**

Reported analytical detection levels are compared against the required quantitation limits (RQLs) to ensure that laboratory detection levels meet the required criteria. All reported laboratory detection levels met the analyte specific RQL.

- **Completeness**

Data package No. J02198 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to method blank contamination, all thallium results were qualified as undetected and flagged "UJ".

Appendix 1
Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validator in compliance with the WCH validation SOW are as follows:

- U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for dilution and moisture content by the laboratory.
- UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.
- J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.
- R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.
- UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.
- NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).
- N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Appendix 2
Summary of Data Qualification

INORGANIC DATA QUALIFICATION SUMMARY*

| | | | |

The Uranium method substitution noted above, as agreed to by all parties, has no technical impact on the data.

I certify that this data package is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed in this Case Narrative. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or a designee, as verified by the signature on the Report Cover.

With exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. All laboratory quality control samples analyzed in conjunction with the samples in this project were within established control limits, with any exceptions noted. Calculations are performed before rounding to avoid round-off errors in calculated results.

This report includes reporting limits (RLs) less than TestAmerica Denver's practical quantitation limits. These reporting limits are being used specifically at the client's request to meet the needs of this project. Please note that data are not normally reported to these levels without qualification, since they are inherently less reliable and potentially less defensible than required by the current NELAC standards.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 7/13/2016 9:30 AM and 7/14/2016 9:25 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 4 coolers at receipt time were 1.7° C, 2.9° C, 3.4° C and 4.9° C.

Receipt Exceptions

It was noted that the VOA vials did not have labels affixed to them. There was one label for each set of VOA vials that was affixed to the bubble bag. Each label was transferred to one of the vials in each set. The client was notified on 7/15/2016.

GC/MS VOLATILES - SW846 8260B

The following compounds were not found as part of a TIC search performed for samples J1V931, J1V932 and J1V933: Acrylamide [79-06-1]; Formaldehyde [50-00-0]; 1,3-Butadiene [106-99-0]; Chlorodifluoromethane [75-45-6]; Dichloropropanol [26545-73-3]; Trichloromethanethiol [75-70-7]; Allyl alcohol (2-Propen-1-ol) [107-18-6]; Crotonaldehyde (2-Butenaldehyde) [4170-30-3]; Epichlorohydrin [106-89-8].

The GC/MS Volatiles analyses of samples J1V932 and J1V933 were performed 3 days outside the recommended sample holding times, due to analyst oversight. The client was notified on 8/2/2016.

The preservative used in the sample containers provided is not compatible with one of the Method 8260B analytes requested. Samples J1V931, J1V932 and J1V933 were received preserved with hydrochloric acid. The requested target analyte list includes 2-chloroethyl vinyl ether, an acid-labile compound that degrades in an acidic medium.

Methylene Chloride, a common laboratory contaminant, is present in the method blank associated with batch 280-334916 at a level exceeding the reporting limit. Because this common laboratory contaminant is present in the method blank at a level that is less than five times the reporting limit, corrective action is not required.

Low levels of Methylene chloride, a common laboratory contaminant, are present in the method blank associated with batch 280-335637. Because the concentration in the method blank is not present at a level greater than the reporting limit, corrective action is deemed unnecessary.

The LCS associated with batch 280-334916 exhibited the percent recovery outside the control limits, biased high, for Methylene Chloride, and the associated sample result has been flagged "T". As Methylene Chloride is not present at a level greater than the reporting limit in the associated sample, corrective action is deemed unnecessary.

2-Chloroethyl vinyl ether was not recovered in the MS/MSD performed on sample J1V931 in batch 280-334916 due to the acid preservative used in the sample. The acceptable LCS analysis data indicated that the analytical system was operating within control; therefore, corrective action is deemed unnecessary.

Due to analyst oversight, MS/MSD analysis was not performed for batch 280-335637. Method precision and accuracy have been verified by the acceptable LCS/LCSD analysis data.

A Continuing Calibration Verification (CCV) standard associated with samples in batch 280-334916 exhibited the %Difference (%D) value outside acceptance criteria, biased low, for 1-Butanol (-50.2%). The sample associated with this CCV was non-detect for the affected analyte. All CCC and SPCC compounds are in control; therefore, method criteria have been met and corrective action is deemed unnecessary.

No other anomalies were encountered.

GC/MS SEMIVOLATILES - SW846 8270C

The following compounds were not found as part of a TIC search performed for samples J1V931 and J1V932: 1-Acetyl-2-thiorurea [591-08-2]; 2,5-Diaminotoluene [95-70-5]; 2-Cyclohexyl-4,6-dinitrophenol [131-89-5]; Hexachlorophene [70-30-4].

Low levels of Benzyl alcohol are present in the method blank associated with batch 280-334208. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary. Associated sample results present above the MDL and/or RL have been flagged with a "B".

A Continuing Calibration Verification (CCV) standard associated with samples in analysis batch 280-335194 exhibited the %Difference (%D) value outside acceptance criteria, biased low, for 4-Nitroquinoline-1-oxide (-50.1%). The samples associated with this CCV were non-detect for the affected analyte. All CCC and SPCC compounds are in control; therefore, method criteria have been met and corrective action is deemed unnecessary.

No other anomalies were encountered.

GLYCOLS - SW846 8015C

Surrogate 1,4-Butanediol was recovered outside the control limits, biased low, in samples J1V931 and J1V932. The laboratory noted that this anomaly was due to obvious matrix interference; therefore, corrective action is deemed unnecessary.

No other anomalies were encountered.

METHANOL - SW846 8015C

No anomalies were encountered.

GRO - NWTPH-Gx

The samples were collected in properly preserved vials for analysis of gasoline range organics (GRO). However, when verified by the laboratory, the pH was greater than 2 and the following sample was analyzed after 7 days from sampling: J1V932 (pH = 7).

No other anomalies were encountered.

PESTICIDES - SW846 8081A

The LCS associated with batch 280-334134 exhibited percent recoveries outside the control limits, biased low, as follows: 4,4'-DDE = 72% (lower limit 74), Aldrin = 34% (lower limit 44), Heptachlor = 45% (lower limit 52). Associated sample results have been flagged with an "N". It can be noted that the spike compound recoveries and surrogate recoveries for the MS/MSD performed on sample J1V931 were in control. The laboratory re-extracted the samples, unavoidably 14 days past the 7 day recommended sample holding time. Upon re-extraction and reanalysis of the samples under batch 280-336109, the associated LCS spike compound recoveries were 100% in control, and the non-detect results were confirmed. The original analysis data have been reported as the non-detect sample results were confirmed.

No other anomalies were encountered.

PCBs - SW846 8082

No anomalies were encountered.

HERBICIDES - SW846 8151A

No anomalies were encountered.

DRO - NWTPH-Dx

Low levels of C10-C36 are present in the method blank associated with batch 280-334141. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary.

No other anomalies were encountered.

PAHs - SW846 8310

Surrogate Terphenyl-d14 recovered outside the control limits, biased low at 67% (lower limit 70%), in sample J1V931. No evidence of matrix interference was present and the sample was non-detect. It can be noted that the spike compound recoveries and surrogate recoveries for the MS/MSD performed on sample J1V931 were in control. The laboratory re-extracted the sample, unavoidably 13 days past the 7 day recommended sample holding time, and the surrogate was in control at 94% and the non-detect results were confirmed. Due to insufficient sample volume remaining, sample specific MS/MSD analysis could not be performed for the re-extract batch. The original analysis data have been reported as the non-detect sample results were confirmed and the sample specific batch MS/MSD was associated with the original analysis.

No other anomalies were encountered.

TOTAL METALS - SW846 6010B/6020/7470A

Serial dilution of a digestate in batch 280-334811 indicates that physical and chemical interferences are present for Uranium. Results have been flagged with an "X".

Low levels of Thallium are present in the method blank associated with batch 280-334811. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary.

It can be noted that the sample amount was greater than four times the spike amount for Calcium and Uranium in the Matrix Spike performed on sample J1V931; therefore, control limits are not applicable.

The duplicate analysis of sample J1V931 exhibited RPD data outside the control limits for Thallium, and the associated sample result has been flagged "M". There is no indication that the analytical system was operating out of control, and method accuracy has been verified by the acceptable LCS analysis data; therefore, corrective action is deemed unnecessary.

No other anomalies were encountered.

OIL & GREASE (HEM) - EPA 1664A

No anomalies were encountered.

ANIONS - MCAWW 300.0

The orthophosphate as P analyses for samples J1V931 and J1V932 were performed 8-9 hours outside the recommended 48 hour sample holding times. The analyses were originally performed within the sample holding times; however, due to associated continuing calibration verification (CCV) failures, reanalysis was required.

Each sample is analyzed to achieve the lowest possible reporting limits within the constraints of the method. Due to high constituent concentration, samples J1V931 and J1V932 required dilutions prior to the analysis of Nitrate as N, Chloride and Sulfate, and the associated results have been flagged with a "D". The reporting limits have been adjusted relative to the dilutions required.

The orthophosphate as P Matrix Spike performed on sample J1V931 exhibited the percent recovery outside the control limits, and the associated sample result has been flagged "N". There is no indication that the analytical system was operating out of control, and method accuracy has been verified by the acceptable LCS analysis data; therefore, corrective action is deemed unnecessary.

No other anomalies were encountered.

AMMONIA as N - MCAWW 350.1

No anomalies were encountered.

NITRATE NITRITE as N - MCAWW 353.2

Each sample is analyzed to achieve the lowest possible reporting limit within the constraints of the method. Due to high constituent concentration, samples J1V931 and J1V932 had to be analyzed at dilutions, and the associated results have been flagged with a "D". The reporting limits have been adjusted relative to the dilutions required.

The Matrix Spike performed on sample J1V931 exhibited the percent recovery outside the control limits, and the associated sample result has been flagged "N". There is no indication that the analytical system was operating out of control, and method accuracy has been verified by the acceptable LCS analysis data; therefore, corrective action is deemed unnecessary.

No other anomalies were encountered.

CHEMICAL OXYGEN DEMAND - MCAWW 410.4

No anomalies were encountered.

PHENOLICS - MCAWW 420.4

Phenolics are present at a level greater than half the reporting limit in the method blank associated with batch 280-335552. As no detectable concentrations of Phenolics are present in the associated samples, corrective action is deemed unnecessary.

No other anomalies were encountered.

TOTAL CYANIDE - SW846 9012A

Low levels of Total Cyanide are present in the method blank associated with batch 280-334663. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary.

No other anomalies were encountered.

TOTAL ORGANIC HALOGENS (TOX) - SW846 9020B

The laboratory noted that the containers submitted for samples J1V931 and J1V932 were received with excess headspace. This could cause volatile halides to evaporate, resulting in a low bias to the reported results.

Samples J1V931 and J1V932 exhibited elevated detection limits due to the limited sample volume used. The nominal sample amount could not be used due to the nature of the sample matrix.

No other anomalies were encountered.

SULFIDE - SW846 9034

No anomalies were encountered.

ALKALINITY - SM 2320B

Low levels of Alkalinity are present in the method blank associated with batch 280-333888. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary.

No other anomalies were encountered.

TOTAL DISSOLVED SOLIDS - SM 2540C

Samples J1V931 and J1V932 exhibited elevated detection limits due to the limited sample volume used. The nominal sample amount could not be used due to high constituent concentration.

No other anomalies were encountered.

TOTAL SUSPENDED SOLIDS - SM 2540D

No anomalies were encountered.

TOTAL ORGANIC CARBON - SM 5310B

No anomalies were encountered.

PH - SW846 9040B

SU = standard units

Samples J1V931 and J1V932 were analyzed 14 days after sample receipt, due to analyst oversight. It can be noted that pH is a field parameter with a holding time of 15 minutes.

No other anomalies were encountered.

SPECIFIC CONDUCTANCE - SW846 9050A

No anomalies were encountered.

To: Washington Closure Hanford (technical representative)
From: ELR Consulting
Project: ERDF Leachate Tank Summer 2016
Subject: General Organic - Data Package No. J02198-TAL

INTRODUCTION

This memo presents the results of data validation on Summary Data Package No. J02198 prepared by TestAmerica Inc. (TAL). A list of the samples validated along with the analyses reported and the method of analysis is provided in the following table.

| Sample ID | Sample Date | Media | Validation | Analyte |
|------------------|--------------------|--------------|-------------------|----------------|
| J1V931 | 7/12/16 | Water | C | See note 1 |
| J1V932 | 7/12/16 | Water | C | See note 1 |

1 – Glycols by 8015C, non-halogenated organics by 8015C, diesel range organics by NWTPH-D and herbicides by 8151A.

Data validation was conducted in accordance with the WCH validation statement of work and WCH-173, Rev. 2, "Environmental Restoration Disposal Facility Leachate Sampling & Analysis Plan". Appendices 1 through 6 provide the following information as indicated below:

- Appendix 1. Glossary of Data Reporting Qualifiers
- Appendix 2. Summary of Data Qualification
- Appendix 3. Annotated Laboratory Reports
- Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
- Appendix 5. Data Validation Supporting Documentation
- Appendix 6. Additional Documentation Requested by Client

DATA QUALITY OBJECTIVES

• Holding Times & Sample Preservation

Analytical holding times are assessed to ascertain whether the holding time requirements were met by the laboratory. Samples must be analyzed as follows: TPHD must be extracted within 14 days and analyzed within 40 days; glycols & alcohols must be analyzed within 14 days; chlorinated herbicides must be extracted within 7 days and analyzed within 40 days.

If holding times are exceeded, but not by greater than twice the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than twice the limit, all associated detected sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

Due to the holding time being exceeded by less than twice the limit, all glycol results were qualified as estimates and flagged "J".

All other holding times were acceptable.

- **Blanks**

Method blank analyses are conducted to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples of a given matrix. No contaminants should be present in the method blank. Analytical results for analytes present in any sample at less than five times the concentration of that analyte found in the associated blank are qualified as estimated and flagged "UJ".

Due to method blank contamination, all C10-C36 results were qualified as undetected and flagged "U".

All other method blank results were acceptable.

Field Blanks

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike/Matrix Spike Duplicate & Laboratory Control Sample

Matrix spike/matrix spike duplicate and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike/matrix spike duplicate is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Matrix spike/matrix spike duplicate analyses are performed in duplicate using the target compounds for which percent recoveries must be within established laboratory quality control limits. If spike recoveries are outside control limits (50-150% or w/in laboratory specified limits), detected sample results less than five times the spike concentration are qualified as estimates and flagged "J". Undetected sample results with spike recoveries outside control limits are qualified as estimates and flagged "UJ". Sample results greater than five times the spike concentration require no qualification.

All accuracy results were acceptable.

Surrogate Recovery

The analyses of surrogate compounds provide a measure of performance for individual samples. Matrix-specific surrogate compound recovery control windows have been established by the EPA CLP program. If two surrogates of the same class of compounds (base/neutral or acid) are out of control limits, all associated sample results greater than the contract required quantitation limit (CRQL) are qualified as estimates and flagged "J". Sample results less than the CRQL and below the lower control limit are qualified as estimates and flagged "UJ". Sample results less than the CRQL with recoveries above the upper control limit require no qualification. If a surrogate recovery is less than 10%, detects are qualified as estimates and flagged "J" and nondetects are rejected and flagged "UR".

Due to surrogate recoveries outside QC limits (60% & 59%), all ethylene glycol and propylene glycol results were qualified as estimates and flagged "J".

All other surrogate results were acceptable.

- **Precision**

Matrix Spike/Matrix Spike Duplicate Samples

Matrix spike/matrix spike duplicate results provide matrix-specific information on the precision of the method for specific target compound classes. Precision is expressed by the relative percent difference (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample. For samples analyzed using SW-846 protocol, results must be within RPD limits of +/- 20% for water samples and +/- 35% for solid samples. If RPD values are out of specification and the sample concentration is less than five times the spike concentration, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If RPD values are out of specification and the sample concentration is greater than five times the spike concentration, no qualification is required.

All precision results were acceptable.

Field Duplicate Samples

One set field duplicates (J1V931/J1V932) were submitted for analysis. Field duplicates are compared using the same criteria as for laboratory duplicates. All duplicate results were acceptable.

Analytical Detection Levels

Reported analytical detection levels are compared against the required detection limits (RDLs) to ensure that laboratory detection levels meet the required criteria. All results met the RDL.

Completeness

Data package No. J02198 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to the holding time being exceeded by less than twice the limit, all ethylene glycol and propylene glycol results were qualified as estimates and flagged "J".
- Due to method blank contamination, all C10-C36 results were qualified as undetected and flagged "U".
- Due to surrogate recoveries outside QC limits (60% & 59%), all ethylene glycol and propylene glycol results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1
Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validator in compliance with the WCH validation SOW are as follows:

- U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for dilution and moisture content by the laboratory.
- UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.
- J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.
- R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.
- UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.
- NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).
- N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Appendix 2
Summary of Data Qualification

GENERAL ORGANIC DATA QUALIFICATION SUMMARY*

| | | | |
|-------------------------------------|--------------------------|-------------------------|----------------------------------|
| SDG: J02198 | REVIEWER: ELR | Project: ERDF | PAGE <u>1</u> OF <u>1</u> |
| COMPOUND | QUALIFIER | SAMPLES AFFECTED | REASON |
| ethylene glycol propylene glycol | J | All | Hold time |
| C10-C36 | U | All | Method blank contamination |
| ethylene glycol propylene glycol | J | All | Surrogate recovery |

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

| J1V933 | 280-85505-3 | 8260 | 8260B |

The Uranium method substitution noted above, as agreed to by all parties, has no technical impact on the data.

I certify that this data package is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed in this Case Narrative. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or a designee, as verified by the signature on the Report Cover.

With exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. All laboratory quality control samples analyzed in conjunction with the samples in this project were within established control limits, with any exceptions noted. Calculations are performed before rounding to avoid round-off errors in calculated results.

This report includes reporting limits (RLs) less than TestAmerica Denver's practical quantitation limits. These reporting limits are being used specifically at the client's request to meet the needs of this project. Please note that data are not normally reported to these levels without qualification, since they are inherently less reliable and potentially less defensible than required by the current NELAC standards.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 7/13/2016 9:30 AM and 7/14/2016 9:25 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 4 coolers at receipt time were 1.7° C, 2.9° C, 3.4° C and 4.9° C.

Receipt Exceptions

It was noted that the VOA vials did not have labels affixed to them. There was one label for each set of VOA vials that was affixed to the bubble bag. Each label was transferred to one of the vials in each set. The client was notified on 7/15/2016.

GC/MS VOLATILES - SW846 8260B

The following compounds were not found as part of a TIC search performed for samples J1V931, J1V932 and J1V933: Acrylamide [79-06-1]; Formaldehyde [50-00-0]; 1,3-Butadiene [106-99-0]; Chlorodifluoromethane [75-45-6]; Dichloropropanol [26545-73-3]; Trichloromethanethiol [75-70-7]; Allyl alcohol (2-Propen-1-ol) [107-18-6]; Crotonaldehyde (2-Butenaldehyde) [4170-30-3]; Epichlorohydrin [106-89-8].

The GC/MS Volatiles analyses of samples J1V932 and J1V933 were performed 3 days outside the recommended sample holding times, due to analyst oversight. The client was notified on 8/2/2016.

The preservative used in the sample containers provided is not compatible with one of the Method 8260B analytes requested. Samples J1V931, J1V932 and J1V933 were received preserved with hydrochloric acid. The requested target analyte list includes 2-chloroethyl vinyl ether, an acid-labile compound that degrades in an acidic medium.

Methylene Chloride, a common laboratory contaminant, is present in the method blank associated with batch 280-334916 at a level exceeding the reporting limit. Because this common laboratory contaminant is present in the method blank at a level that is less than five times the reporting limit, corrective action is not required.

Low levels of Methylene chloride, a common laboratory contaminant, are present in the method blank associated with batch 280-335637. Because the concentration in the method blank is not present at a level greater than the reporting limit, corrective action is deemed unnecessary.

The LCS associated with batch 280-334916 exhibited the percent recovery outside the control limits, biased high, for Methylene Chloride, and the associated sample result has been flagged "T". As Methylene Chloride is not present at a level greater than the reporting limit in the associated sample, corrective action is deemed unnecessary.

2-Chloroethyl vinyl ether was not recovered in the MS/MSD performed on sample J1V931 in batch 280-334916 due to the acid preservative used in the sample. The acceptable LCS analysis data indicated that the analytical system was operating within control; therefore, corrective action is deemed unnecessary.

Due to analyst oversight, MS/MSD analysis was not performed for batch 280-335637. Method precision and accuracy have been verified by the acceptable LCS/LCSD analysis data.

A Continuing Calibration Verification (CCV) standard associated with samples in batch 280-334916 exhibited the %Difference (%D) value outside acceptance criteria, biased low, for 1-Butanol (-50.2%). The sample associated with this CCV was non-detect for the affected analyte. All CCC and SPCC compounds are in control; therefore, method criteria have been met and corrective action is deemed unnecessary.

No other anomalies were encountered.

GC/MS SEMIVOLATILES - SW846 8270C

The following compounds were not found as part of a TIC search performed for samples J1V931 and J1V932: 1-Acetyl-2-thiorurea [591-08-2]; 2,5-Diaminotoluene [95-70-5]; 2-Cyclohexyl-4,6-dinitrophenol [131-89-5]; Hexachlorophene [70-30-4].

Low levels of Benzyl alcohol are present in the method blank associated with batch 280-334208. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary. Associated sample results present above the MDL and/or RL have been flagged with a "B".

A Continuing Calibration Verification (CCV) standard associated with samples in analysis batch 280-335194 exhibited the %Difference (%D) value outside acceptance criteria, biased low, for 4-Nitroquinoline-1-oxide (-50.1%). The samples associated with this CCV were non-detect for the affected analyte. All CCC and SPCC compounds are in control; therefore, method criteria have been met and corrective action is deemed unnecessary.

No other anomalies were encountered.

GLYCOLS - SW846 8015C

Surrogate 1,4-Butanediol was recovered outside the control limits, biased low, in samples J1V931 and J1V932. The laboratory noted that this anomaly was due to obvious matrix interference; therefore, corrective action is deemed unnecessary.

No other anomalies were encountered.

METHANOL - SW846 8015C

No anomalies were encountered.

GRO - NWTPH-Gx

The samples were collected in properly preserved vials for analysis of gasoline range organics (GRO). However, when verified by the laboratory, the pH was greater than 2 and the following sample was analyzed after 7 days from sampling: J1V932 (pH = 7).

No other anomalies were encountered.

PESTICIDES - SW846 8081A

The LCS associated with batch 280-334134 exhibited percent recoveries outside the control limits, biased low, as follows: 4,4'-DDE = 72% (lower limit 74), Aldrin = 34% (lower limit 44), Heptachlor = 45% (lower limit 52). Associated sample results have been flagged with an "N". It can be noted that the spike compound recoveries and surrogate recoveries for the MS/MSD performed on sample J1V931 were in control. The laboratory re-extracted the samples, unavoidably 14 days past the 7 day recommended sample holding time. Upon re-extraction and reanalysis of the samples under batch 280-336109, the associated LCS spike compound recoveries were 100% in control, and the non-detect results were confirmed. The original analysis data have been reported as the non-detect sample results were confirmed.

No other anomalies were encountered.

PCBs - SW846 8082

No anomalies were encountered.

HERBICIDES - SW846 8151A

No anomalies were encountered.

DRO - NWTPH-Dx

Low levels of C10-C36 are present in the method blank associated with batch 280-334141. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary.

No other anomalies were encountered.

PAHs - SW846 8310

Surrogate Terphenyl-d14 recovered outside the control limits, biased low at 67% (lower limit 70%), in sample J1V931. No evidence of matrix interference was present and the sample was non-detect. It can be noted that the spike compound recoveries and surrogate recoveries for the MS/MSD performed on sample J1V931 were in control. The laboratory re-extracted the sample, unavoidably 13 days past the 7 day recommended sample holding time, and the surrogate was in control at 94% and the non-detect results were confirmed. Due to insufficient sample volume remaining, sample specific MS/MSD analysis could not be performed for the re-extract batch. The original analysis data have been reported as the non-detect sample results were confirmed and the sample specific batch MS/MSD was associated with the original analysis.

No other anomalies were encountered.

TOTAL METALS - SW846 6010B/6020/7470A

Serial dilution of a digestate in batch 280-334811 indicates that physical and chemical interferences are present for Uranium. Results have been flagged with an "X".

Low levels of Thallium are present in the method blank associated with batch 280-334811. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary.

It can be noted that the sample amount was greater than four times the spike amount for Calcium and Uranium in the Matrix Spike performed on sample J1V931; therefore, control limits are not applicable.

The duplicate analysis of sample J1V931 exhibited RPD data outside the control limits for Thallium, and the associated sample result has been flagged "M". There is no indication that the analytical system was operating out of control, and method accuracy has been verified by the acceptable LCS analysis data; therefore, corrective action is deemed unnecessary.

No other anomalies were encountered.

OIL & GREASE (HEM) - EPA 1664A

No anomalies were encountered.

ANIONS - MCAWW 300.0

The orthophosphate as P analyses for samples J1V931 and J1V932 were performed 8-9 hours outside the recommended 48 hour sample holding times. The analyses were originally performed within the sample holding times; however, due to associated continuing calibration verification (CCV) failures, reanalysis was required.

Each sample is analyzed to achieve the lowest possible reporting limits within the constraints of the method. Due to high constituent concentration, samples J1V931 and J1V932 required dilutions prior to the analysis of Nitrate as N, Chloride and Sulfate, and the associated results have been flagged with a "D". The reporting limits have been adjusted relative to the dilutions required.

The orthophosphate as P Matrix Spike performed on sample J1V931 exhibited the percent recovery outside the control limits, and the associated sample result has been flagged "N". There is no indication that the analytical system was operating out of control, and method accuracy has been verified by the acceptable LCS analysis data; therefore, corrective action is deemed unnecessary.

No other anomalies were encountered.

AMMONIA as N - MCAWW 350.1

No anomalies were encountered.

NITRATE NITRITE as N - MCAWW 353.2

Each sample is analyzed to achieve the lowest possible reporting limit within the constraints of the method. Due to high constituent concentration, samples J1V931 and J1V932 had to be analyzed at dilutions, and the associated results have been flagged with a "D". The reporting limits have been adjusted relative to the dilutions required.

The Matrix Spike performed on sample J1V931 exhibited the percent recovery outside the control limits, and the associated sample result has been flagged "N". There is no indication that the analytical system was operating out of control, and method accuracy has been verified by the acceptable LCS analysis data; therefore, corrective action is deemed unnecessary.

No other anomalies were encountered.

CHEMICAL OXYGEN DEMAND - MCAWW 410.4

No anomalies were encountered.

PHENOLICS - MCAWW 420.4

Phenolics are present at a level greater than half the reporting limit in the method blank associated with batch 280-335552. As no detectable concentrations of Phenolics are present in the associated samples, corrective action is deemed unnecessary.

No other anomalies were encountered.

TOTAL CYANIDE - SW846 9012A

Low levels of Total Cyanide are present in the method blank associated with batch 280-334663. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary.

No other anomalies were encountered.

TOTAL ORGANIC HALOGENS (TOX) - SW846 9020B

The laboratory noted that the containers submitted for samples J1V931 and J1V932 were received with excess headspace. This could cause volatile halides to evaporate, resulting in a low bias to the reported results.

Samples J1V931 and J1V932 exhibited elevated detection limits due to the limited sample volume used. The nominal sample amount could not be used due to the nature of the sample matrix.

No other anomalies were encountered.

SULFIDE - SW846 9034

No anomalies were encountered.

ALKALINITY - SM 2320B

Low levels of Alkalinity are present in the method blank associated with batch 280-333888. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary.

No other anomalies were encountered.

TOTAL DISSOLVED SOLIDS - SM 2540C

Samples J1V931 and J1V932 exhibited elevated detection limits due to the limited sample volume used. The nominal sample amount could not be used due to high constituent concentration.

No other anomalies were encountered.

TOTAL SUSPENDED SOLIDS - SM 2540D

No anomalies were encountered.

TOTAL ORGANIC CARBON - SM 5310B

No anomalies were encountered.

PH - SW846 9040B

SU = standard units

Samples J1V931 and J1V932 were analyzed 14 days after sample receipt, due to analyst oversight. It can be noted that pH is a field parameter with a holding time of 15 minutes.

No other anomalies were encountered.

SPECIFIC CONDUCTANCE - SW846 9050A

No anomalies were encountered.

1. DATA PACKAGE COMPLETENESS AND CASE NARRATIVE

Technical verification documentation present? Yes No **N/A**

Comments: _____

2. INSTRUMENT TUNING AND CALIBRATION (Levels D and E)

Initial calibrations acceptable? Yes No **N/A**
 Continuing calibrations acceptable? Yes No **N/A**
 Standards traceable? Yes No **N/A**
 Standards expired? Yes No **N/A**
 Calculation check acceptable? Yes No **N/A**

Comments: _____

GENERAL ORGANIC DATA VALIDATION CHECKLIST

3. BLANKS (Levels B, C, D, and E)

Calibration blanks analyzed? (Levels D, E) Yes No N/A
Calibration blank results acceptable? (Levels D, E) Yes No N/A
Laboratory blanks analyzed? Yes No N/A
Laboratory blank results acceptable? Yes No N/A
Field/trip blanks analyzed? (Levels C, D, E) Yes No N/A
Field/trip blank results acceptable? (Levels C, D, E) Yes No N/A
Transcription/calculation errors? (Levels D, E) Yes No N/A
Comments: C10-C36 - U all

no PDS

4. ACCURACY (Levels C, D, and E)

Surrogates/system monitoring compounds analyzed? Yes No N/A
Surrogate/system monitoring compound recoveries acceptable? Yes No N/A
Surrogates traceable? (Levels D, E) Yes No N/A
Surrogates expired? (Levels D, E) Yes No N/A
MS/MSD samples analyzed? Yes No N/A
MS/MSD results acceptable? Yes No N/A
MS/MSD standards NIST traceable? (Levels D, E) Yes No N/A
MS/MSD standards expired? (Levels D, E) Yes No N/A
LCS/BSS samples analyzed? Yes No N/A
LCS/BSS results acceptable? Yes No N/A
Standards traceable? (Levels D, E) Yes No N/A
Standards expired? (Levels D, E) Yes No N/A
Transcription/calculation errors? (Levels D, E) Yes No N/A
Performance audit sample(s) analyzed? Yes No N/A
Performance audit sample results acceptable? Yes No N/A
Comments: Surrogate - glycols - J all

no PDS

GENERAL ORGANIC DATA VALIDATION CHECKLIST

5. PRECISION (Levels C, D, and E)

- Duplicate RPD values acceptable? Yes No N/A *to seal*
- Duplicate results acceptable? Yes No N/A
- MS/MSD standards NIST traceable? (Levels D, E) Yes No N/A
- MS/MSD standards expired? (Levels D, E) Yes No N/A
- Field duplicate RPD values acceptable? Yes No N/A
- Field split RPD values acceptable? Yes No N/A
- Transcription/calculation errors? (Levels D, E) Yes No N/A

Comments: _____

6. HOLDING TIMES (all levels)

- Samples properly preserved? Yes No N/A
- Sample holding times acceptable? Yes No N/A

Comments: _____
glycols > 2x - J all

GENERAL ORGANIC DATA VALIDATION CHECKLIST

8. COMPOUND IDENTIFICATION, QUANTITATION, AND DETECTION LIMITS (all levels)

Results reported for all requested analyses? Yes No N/A
Results supported in the raw data? (Levels D, E)..... Yes No N/A
Samples properly prepared? (Levels D, E)..... Yes No N/A
Detection limits meet RDL? Yes No N/A
Transcription/calculation errors? (Levels D, E)..... Yes No N/A

Comments: _____

9. SAMPLE CLEANUP (Levels D and E)

Fluoridil ® (or other absorbant) cleanup performed?..... Yes No N/A
Lot check performed?..... Yes No N/A
Check recoveries acceptable?..... Yes No N/A
Check materials traceable? Yes No N/A
Check materials Expired?..... Yes No N/A
Analytical batch QC given similar cleanup? Yes No N/A
Transcription/Calculation Errors? Yes No N/A

Comments: _____

Subject: Polyaromatic Hydrocarbon - Data Package No. J02198-TAL

INTRODUCTION

This memo presents the results of data validation on Summary Data Package No. J02198 prepared by TestAmerica Inc. (TAL). A list of the samples validated along with the analyses reported and the method of analysis is provided in the following table.

| Sample ID | Sample Date | Media | Validation | Analyte |
|------------------|--------------------|--------------|-------------------|----------------|
| J1V931 | 7/12/16 | Water | C | See note 1 |
| J1V932 | 7/12/16 | Water | C | See note 1 |

1 – Polyaromatic hydrocarbons by 8310.

Data validation was conducted in accordance with the WCH validation statement of work and WCH-173, Rev. 2, "Environmental Restoration Disposal Facility Leachate Sampling & Analysis Plan". Appendices 1 through 6 provide the following information as indicated below:

- Appendix 1. Glossary of Data Reporting Qualifiers
- Appendix 2. Summary of Data Qualification
- Appendix 3. Annotated Laboratory Reports
- Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
- Appendix 5. Data Validation Supporting Documentation
- Appendix 6. Additional Documentation Requested by Client

DATA QUALITY OBJECTIVES

• Holding Times & Sample Preservation

Analytical holding times are assessed to ascertain whether the holding time requirements were met by the laboratory. Samples must be prepared within 14 days and analyzed within 40 days.

If holding times are exceeded, but not by greater than twice the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than twice the limit, all associated detected sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

All holding times were acceptable.

- **Blanks**

Method blank analyses are conducted to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples of a given matrix. No contaminants should be present in the method blank. Analytical results for analytes present in any sample at less than five times the concentration of that analyte found in the associated blank are qualified as estimated and flagged "UJ".

All method blank results were acceptable.

Field Blanks

No field blanks were submitted for analysis.

- **Accuracy**

Matrix Spike/Matrix Spike Duplicate & Laboratory Control Sample

Matrix spike/matrix spike duplicate and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike/matrix spike duplicate is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Matrix spike/matrix spike duplicate analyses are performed in duplicate using the target compounds for which percent recoveries must be within established laboratory quality control limits. If spike recoveries are outside control limits (50-150% or w/in laboratory specified limits), detected sample results less than five times the spike concentration are qualified as estimates and flagged "J". Undetected sample results with spike recoveries outside control limits are qualified as estimates and flagged "UJ". Sample results greater than five times the spike concentration require no qualification.

All accuracy results were acceptable.

Surrogate Recovery

The analyses of surrogate compounds provide a measure of performance for individual samples. Matrix-specific surrogate compound recovery control windows have been established by the EPA CLP program. If two surrogates of the same class of compounds (base/neutral or acid) are out of control limits, all associated sample results greater than the contract required quantitation limit (CRQL) are qualified as estimates and flagged "J". Sample results less than the CRQL and below the lower control limit are qualified as estimates and flagged "UJ". Sample results less than the CRQL with recoveries above the upper control limit require no qualification. If a surrogate recovery is less than 10%, detects are qualified as estimates and flagged "J" and nondetects are rejected and flagged "UR".

Due to a surrogate recovery outside QC limits (67%), all PAH results in sample J1V931 were qualified as estimates and flagged "J".

All other surrogate results were acceptable.

- **Precision**

- Matrix Spike/Matrix Spike Duplicate Samples

- Matrix spike/matrix spike duplicate results provide matrix-specific information on the precision of the method for specific target compound classes. Precision is expressed by the relative percent difference (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample. For samples analyzed using SW-846 protocol, results must be within RPD limits of +/- 20% for water samples and +/- 35% for solid samples. If RPD values are out of specification and the sample concentration is less than five times the spike concentration, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If RPD values are out of specification and the sample concentration is greater than five times the spike concentration, no qualification is required.

- All precision results were acceptable.

- Field Duplicate Samples

- One set field duplicates (J1V931/J1V932) were submitted for analysis. Field duplicates are compared using the same criteria as for laboratory duplicates. All duplicate results were acceptable.

- **Analytical Detection Levels**

- Reported analytical detection levels are compared against the required detection limits (RDLs) to ensure that laboratory detection levels meet the required criteria. All results met the RDL.

- **Completeness**

- Data package No. J02198 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to a surrogate recovery outside QC limits (67%), all PAH results in sample J1V931 were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1
Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validator in compliance with the WCH validation SOW are as follows:

- U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for dilution and moisture content by the laboratory.
- UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.
- J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.
- R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.
- UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.
- NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).
- N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

The Uranium method substitution noted above, as agreed to by all parties, has no technical impact on the data.

I certify that this data package is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed in this Case Narrative. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or a designee, as verified by the signature on the Report Cover.

With exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. All laboratory quality control samples analyzed in conjunction with the samples in this project were within established control limits, with any exceptions noted. Calculations are performed before rounding to avoid round-off errors in calculated results.

This report includes reporting limits (RLs) less than TestAmerica Denver's practical quantitation limits. These reporting limits are being used specifically at the client's request to meet the needs of this project. Please note that data are not normally reported to these levels without qualification, since they are inherently less reliable and potentially less defensible than required by the current NELAC standards.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 7/13/2016 9:30 AM and 7/14/2016 9:25 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 4 coolers at receipt time were 1.7° C, 2.9° C, 3.4° C and 4.9° C.

Receipt Exceptions

It was noted that the VOA vials did not have labels affixed to them. There was one label for each set of VOA vials that was affixed to the bubble bag. Each label was transferred to one of the vials in each set. The client was notified on 7/15/2016.

GC/MS VOLATILES - SW846 8260B

The following compounds were not found as part of a TIC search performed for samples J1V931, J1V932 and J1V933: Acrylamide [79-06-1]; Formaldehyde [50-00-0]; 1,3-Butadiene [106-99-0]; Chlorodifluoromethane [75-45-6]; Dichloropropanol [26545-73-3]; Trichloromethanethiol [75-70-7]; Allyl alcohol (2-Propen-1-ol) [107-18-6]; Crotonaldehyde (2-Butenaldehyde) [4170-30-3]; Epichlorohydrin [106-89-8].

The GC/MS Volatiles analyses of samples J1V932 and J1V933 were performed 3 days outside the recommended sample holding times, due to analyst oversight. The client was notified on 8/2/2016.

The preservative used in the sample containers provided is not compatible with one of the Method 8260B analytes requested. Samples J1V931, J1V932 and J1V933 were received preserved with hydrochloric acid. The requested target analyte list includes 2-chloroethyl vinyl ether, an acid-labile compound that degrades in an acidic medium.

Methylene Chloride, a common laboratory contaminant, is present in the method blank associated with batch 280-334916 at a level exceeding the reporting limit. Because this common laboratory contaminant is present in the method blank at a level that is less than five times the reporting limit, corrective action is not required.

Low levels of Methylene chloride, a common laboratory contaminant, are present in the method blank associated with batch 280-335637. Because the concentration in the method blank is not present at a level greater than the reporting limit, corrective action is deemed unnecessary.

The LCS associated with batch 280-334916 exhibited the percent recovery outside the control limits, biased high, for Methylene Chloride, and the associated sample result has been flagged "T". As Methylene Chloride is not present at a level greater than the reporting limit in the associated sample, corrective action is deemed unnecessary.

2-Chloroethyl vinyl ether was not recovered in the MS/MSD performed on sample J1V931 in batch 280-334916 due to the acid preservative used in the sample. The acceptable LCS analysis data indicated that the analytical system was operating within control; therefore, corrective action is deemed unnecessary.

Due to analyst oversight, MS/MSD analysis was not performed for batch 280-335637. Method precision and accuracy have been verified by the acceptable LCS/LCSD analysis data.

A Continuing Calibration Verification (CCV) standard associated with samples in batch 280-334916 exhibited the %Difference (%D) value outside acceptance criteria, biased low, for 1-Butanol (-50.2%). The sample associated with this CCV was non-detect for the affected analyte. All CCC and SPCC compounds are in control; therefore, method criteria have been met and corrective action is deemed unnecessary.

No other anomalies were encountered.

GC/MS SEMIVOLATILES - SW846 8270C

The following compounds were not found as part of a TIC search performed for samples J1V931 and J1V932: 1-Acetyl-2-thiorurea [591-08-2]; 2,5-Diaminotoluene [95-70-5]; 2-Cyclohexyl-4,6-dinitrophenol [131-89-5]; Hexachlorophene [70-30-4].

Low levels of Benzyl alcohol are present in the method blank associated with batch 280-334208. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary. Associated sample results present above the MDL and/or RL have been flagged with a "B".

A Continuing Calibration Verification (CCV) standard associated with samples in analysis batch 280-335194 exhibited the %Difference (%D) value outside acceptance criteria, biased low, for 4-Nitroquinoline-1-oxide (-50.1%). The samples associated with this CCV were non-detect for the affected analyte. All CCC and SPCC compounds are in control; therefore, method criteria have been met and corrective action is deemed unnecessary.

No other anomalies were encountered.

GLYCOLS - SW846 8015C

Surrogate 1,4-Butanediol was recovered outside the control limits, biased low, in samples J1V931 and J1V932. The laboratory noted that this anomaly was due to obvious matrix interference; therefore, corrective action is deemed unnecessary.

No other anomalies were encountered.

METHANOL - SW846 8015C

No anomalies were encountered.

GRO - NWTPH-Gx

The samples were collected in properly preserved vials for analysis of gasoline range organics (GRO). However, when verified by the laboratory, the pH was greater than 2 and the following sample was analyzed after 7 days from sampling: J1V932 (pH = 7).

No other anomalies were encountered.

PESTICIDES - SW846 8081A

The LCS associated with batch 280-334134 exhibited percent recoveries outside the control limits, biased low, as follows: 4,4'-DDE = 72% (lower limit 74), Aldrin = 34% (lower limit 44), Heptachlor = 45% (lower limit 52). Associated sample results have been flagged with an "N". It can be noted that the spike compound recoveries and surrogate recoveries for the MS/MSD performed on sample J1V931 were in control. The laboratory re-extracted the samples, unavoidably 14 days past the 7 day recommended sample holding time. Upon re-extraction and reanalysis of the samples under batch 280-336109, the associated LCS spike compound recoveries were 100% in control, and the non-detect results were confirmed. The original analysis data have been reported as the non-detect sample results were confirmed.

No other anomalies were encountered.

PCBs - SW846 8082

No anomalies were encountered.

HERBICIDES - SW846 8151A

No anomalies were encountered.

DRO - NWTPH-Dx

Low levels of C10-C36 are present in the method blank associated with batch 280-334141. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary.

No other anomalies were encountered.

PAHs - SW846 8310

Surrogate Terphenyl-d14 recovered outside the control limits, biased low at 67% (lower limit 70%), in sample J1V931. No evidence of matrix interference was present and the sample was non-detect. It can be noted that the spike compound recoveries and surrogate recoveries for the MS/MSD performed on sample J1V931 were in control. The laboratory re-extracted the sample, unavoidably 13 days past the 7 day recommended sample holding time, and the surrogate was in control at 94% and the non-detect results were confirmed. Due to insufficient sample volume remaining, sample specific MS/MSD analysis could not be performed for the re-extract batch. The original analysis data have been reported as the non-detect sample results were confirmed and the sample specific batch MS/MSD was associated with the original analysis.

No other anomalies were encountered.

TOTAL METALS - SW846 6010B/6020/7470A

Serial dilution of a digestate in batch 280-334811 indicates that physical and chemical interferences are present for Uranium. Results have been flagged with an "X".

Low levels of Thallium are present in the method blank associated with batch 280-334811. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary.

It can be noted that the sample amount was greater than four times the spike amount for Calcium and Uranium in the Matrix Spike performed on sample J1V931; therefore, control limits are not applicable.

The duplicate analysis of sample J1V931 exhibited RPD data outside the control limits for Thallium, and the associated sample result has been flagged "M". There is no indication that the analytical system was operating out of control, and method accuracy has been verified by the acceptable LCS analysis data; therefore, corrective action is deemed unnecessary.

No other anomalies were encountered.

OIL & GREASE (HEM) - EPA 1664A

No anomalies were encountered.

ANIONS - MCAWW 300.0

The orthophosphate as P analyses for samples J1V931 and J1V932 were performed 8-9 hours outside the recommended 48 hour sample holding times. The analyses were originally performed within the sample holding times; however, due to associated continuing calibration verification (CCV) failures, reanalysis was required.

Each sample is analyzed to achieve the lowest possible reporting limits within the constraints of the method. Due to high constituent concentration, samples J1V931 and J1V932 required dilutions prior to the analysis of Nitrate as N, Chloride and Sulfate, and the associated results have been flagged with a "D". The reporting limits have been adjusted relative to the dilutions required.

The orthophosphate as P Matrix Spike performed on sample J1V931 exhibited the percent recovery outside the control limits, and the associated sample result has been flagged "N". There is no indication that the analytical system was operating out of control, and method accuracy has been verified by the acceptable LCS analysis data; therefore, corrective action is deemed unnecessary.

No other anomalies were encountered.

AMMONIA as N - MCAWW 350.1

No anomalies were encountered.

NITRATE NITRITE as N - MCAWW 353.2

Each sample is analyzed to achieve the lowest possible reporting limit within the constraints of the method. Due to high constituent concentration, samples J1V931 and J1V932 had to be analyzed at dilutions, and the associated results have been flagged with a "D". The reporting limits have been adjusted relative to the dilutions required.

The Matrix Spike performed on sample J1V931 exhibited the percent recovery outside the control limits, and the associated sample result has been flagged "N". There is no indication that the analytical system was operating out of control, and method accuracy has been verified by the acceptable LCS analysis data; therefore, corrective action is deemed unnecessary.

No other anomalies were encountered.

CHEMICAL OXYGEN DEMAND - MCAWW 410.4

No anomalies were encountered.

PHENOLICS - MCAWW 420.4

Phenolics are present at a level greater than half the reporting limit in the method blank associated with batch 280-335552. As no detectable concentrations of Phenolics are present in the associated samples, corrective action is deemed unnecessary.

No other anomalies were encountered.

TOTAL CYANIDE - SW846 9012A

Low levels of Total Cyanide are present in the method blank associated with batch 280-334663. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary.

No other anomalies were encountered.

TOTAL ORGANIC HALOGENS (TOX) - SW846 9020B

The laboratory noted that the containers submitted for samples J1V931 and J1V932 were received with excess headspace. This could cause volatile halides to evaporate, resulting in a low bias to the reported results.

Samples J1V931 and J1V932 exhibited elevated detection limits due to the limited sample volume used. The nominal sample amount could not be used due to the nature of the sample matrix.

No other anomalies were encountered.

SULFIDE - SW846 9034

No anomalies were encountered.

ALKALINITY - SM 2320B

Low levels of Alkalinity are present in the method blank associated with batch 280-333888. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary.

No other anomalies were encountered.

TOTAL DISSOLVED SOLIDS - SM 2540C

Samples J1V931 and J1V932 exhibited elevated detection limits due to the limited sample volume used. The nominal sample amount could not be used due to high constituent concentration.

No other anomalies were encountered.

TOTAL SUSPENDED SOLIDS - SM 2540D

No anomalies were encountered.

TOTAL ORGANIC CARBON - SM 5310B

No anomalies were encountered.

PH - SW846 9040B

SU = standard units

Samples J1V931 and J1V932 were analyzed 14 days after sample receipt, due to analyst oversight. It can be noted that pH is a field parameter with a holding time of 15 minutes.

No other anomalies were encountered.

SPECIFIC CONDUCTANCE - SW846 9050A

No anomalies were encountered.

Subject: Volatile Organic - Data Package No. J02198-TAL

INTRODUCTION

This memo presents the results of data validation on Data Package No. J02198 prepared by TestAmerica Laboratories (TAL). A list of samples validated along with the analyses reported and the method of analysis is provided in the following table.

| Sample ID | Sample Date | Media | Validation | Analyte |
|------------------|--------------------|--------------|-------------------|----------------|
| J1V931 | 7/12/16 | Water | C | See note 1 |
| J1V932 | 7/12/16 | Water | C | See note 1 |
| J1V933 | 7/12/16 | Water | C | See note 1 |

1 - Volatiles by EPA 8260B & gasoline by NWTPH-D.

Data validation was conducted in accordance with the WCH validation statement of work and WCH-173, Rev. 2, "Environmental Restoration Disposal Facility Leachate Sampling and Analysis Plan". Appendices 1 through 6 provide the following information as indicated below:

- Appendix 1. Glossary of Data Reporting Qualifiers
- Appendix 2. Summary of Data Qualification
- Appendix 3. Annotated Laboratory Reports
- Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
- Appendix 5. Data Validation Supporting Documentation
- Appendix 6. Additional Documentation Requested by Client

DATA QUALITY OBJECTIVES

• Holding Times & Sample Preservation

Analytical holding times are assessed to ascertain whether the holding time requirements were met by the laboratory. Preserved water samples must be analyzed within: 14 days of the date of sample collection for preserved samples and 7 days for unpreserved samples.

If holding times are exceeded, but not by greater than twice the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If holding times are exceeded by greater than twice the limit, all associated detected sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

Due to an incompatible preservative (hydrochloric acid), all 2-chloroethyl vinyl ether results were qualified as estimates and flagged "J".

Due to the holding time being exceeded, all volatile organic results in samples J1V932 and J1V933 were qualified as estimates and flagged "J".

All other holding times and sample reservation parameters were acceptable.

- **Blanks**

Method blank analyses are conducted to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples of a given matrix. No contaminants should be present in the method blank. Analytical results for analytes present in any sample at less than five times the concentration of that analyte found in the associated blank are qualified as non-detects and flagged "U". Common laboratory contaminants present in samples at less than ten times the concentration of that analyte found in the associated blank are qualified as non-detects. If a sample result is less than the project quantitation limit (PQL) and is less than five times (or less than ten times for laboratory contaminants) the highest associated blank result, the sample result value is raised to the PQL, qualified as undetected and flagged "U".

Due to method blank contamination, all methylene chloride results were qualified as undetected and flagged "U".

All other method blank results were acceptable.

Field Blanks

One field (trip) blank (J1V933) was submitted for analysis. No analytes were detected in the field blank.

- **Accuracy**

Matrix Spike/Matrix Spike Duplicate & Laboratory Control Sample

Matrix spike/matrix spike duplicate and laboratory control sample (LCS) analyses are used to assess the analytical accuracy of the reported data. The matrix spike/matrix spike duplicate is used to assess the effect of the matrix on the ability to accurately quantify sample concentrations. Matrix spike/matrix spike duplicate analyses are performed in duplicate using the target compounds for which percent recoveries must be within established laboratory quality control limits. If spike recoveries are outside control limits, detected sample results less than five times the spike concentration are

qualified as estimates and flagged "J". Undetected sample results with spike recoveries outside control limits are qualified as estimates and flagged "UJ". Sample results greater than five times the spike concentration require no qualification.

Due to matrix spike and matrix spike duplicate recoveries outside QC limits (0% & 0%), all 2-chloroethyl vinyl ether results in sample J1V931 were qualified as estimates and flagged "J".

Due to the lack of a matrix spike and matrix spike duplicate analysis, all volatile organic results in samples J1V932 and J1V933 were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

Surrogate Recovery

The analysis of surrogate compounds provides a measure of system performance for individual samples. Matrix-specific surrogate compound recovery control windows have been established by the laboratory program. When a surrogate compound recovery is out of the control window, all positively identified target compounds associated with the unacceptable surrogate recoveries are qualified as estimates and flagged "J".

Undetected compounds with surrogate recoveries less than the lower control limit are qualified as having an estimated detection limit and flagged "UJ". Samples with surrogate recoveries less than ten percent are qualified as estimates and flagged "J" for detects, and rejected and flagged "UR" for nondetects. Undetected compounds with surrogate recoveries greater than the upper control limit require no qualification.

All surrogate recovery results were acceptable.

• **Precision**

Matrix Spike/Matrix Spike Duplicate Samples

Matrix spike/matrix spike duplicate results provide matrix-specific information on the precision of the method for specific target compound classes. Precision is expressed by the relative percent difference (RPD) between the recoveries of duplicate matrix spike analyses performed on a sample. For samples analyzed using SW-846 protocol, results must be within RPD limits of +/- 20% for water samples and +/- 35% for solid samples. If RPD values are out of specification and the sample concentration is less than five times the spike concentration, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-detects. If RPD values are out of specification and the sample concentration is greater than five times the spike concentration, no qualification is required.

Due to the lack of a matrix spike, matrix spike duplicate analysis, all volatile organic results in samples J1V932 and J1V933 were qualified as estimates and flagged "J".

All other precision results were acceptable.

Field Duplicate Samples

One set field duplicates (J1V931/J1V932) were submitted for analysis. Field duplicates are compared using the same criteria as for laboratory duplicates. All duplicate results were acceptable.

Analytical Detection Levels

Reported analytical detection levels are compared against the required detection limits (RDLs) to ensure that laboratory detection levels meet the required criteria. All results met the RDL.

Completeness

Data package No. J02198 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiencies were noted:

- Due to an incompatible preservative (hydrochloric acid), all 2-chloroethyl vinyl ether results were qualified as estimates and flagged "J".
- Due to the holding time being exceeded, all volatile organic results in samples J1V932 and J1V933 were qualified as estimates and flagged "J".
- Due to method blank contamination, all methylene chloride results were qualified as undetected and flagged "U".
- Due to the lack of a matrix spike and matrix spike duplicate analysis, all volatile organic results in samples J1V932 and J1V933 were qualified as estimates and flagged "J".

- Due to matrix spike and matrix spike duplicate recoveries outside QC limits (0% & 0%), all 2-chloroethyl vinyl ether results in sample J1V931 were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1
Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validator in compliance with the WCH validation SOW are as follows:

- U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for dilution and moisture content by the laboratory.
- UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.
- J - Indicates the compound or analyte was analyzed for and detected. Due to a minor QC deficiency identified during the data validation, the associated quantitation limit is an estimate.
- R - Indicates the compound or analyte was analyzed for, detected, and due to an identified major QC deficiency, the data are unusable.
- UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified major QC deficiency.
- NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).
- N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

Appendix 2
Summary of Data Qualification

VOLATILE ORGANIC DATA QUALIFICATION SUMMARY*

| | | | |
|---------------------------|--------------------------|-------------------------|----------------------------------|
| SDG: J02198 | REVIEWER: ELR | Project: ERDF | PAGE <u>1</u> OF <u>1</u> |
| COMPOUND | QUALIFIER | SAMPLES AFFECTED | REASON |
| Methylene chloride | U | All | Method blank contamination |
| All | J | J1V932, J1V933 | Hold time |
| 2-chloroethyl vinyl ether | J | All | Sample preservation |
| All | J | J1V932, J1V933 | No MS or MSD analysis |
| 2-chloroethyl vinyl ether | J | J1V931 | MS & MSD analysis |

* - The Qualified Data Summary Table includes laboratory applied "U" qualifiers not specifically identified here. The laboratory applied "U" qualifiers are included to minimize misinterpretation of results contained in the table.

The Uranium method substitution noted above, as agreed to by all parties, has no technical impact on the data.

I certify that this data package is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed in this Case Narrative. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or a designee, as verified by the signature on the Report Cover.

With exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. All laboratory quality control samples analyzed in conjunction with the samples in this project were within established control limits, with any exceptions noted. Calculations are performed before rounding to avoid round-off errors in calculated results.

This report includes reporting limits (RLs) less than TestAmerica Denver's practical quantitation limits. These reporting limits are being used specifically at the client's request to meet the needs of this project. Please note that data are not normally reported to these levels without qualification, since they are inherently less reliable and potentially less defensible than required by the current NELAC standards.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 7/13/2016 9:30 AM and 7/14/2016 9:25 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 4 coolers at receipt time were 1.7° C, 2.9° C, 3.4° C and 4.9° C.

Receipt Exceptions

It was noted that the VOA vials did not have labels affixed to them. There was one label for each set of VOA vials that was affixed to the bubble bag. Each label was transferred to one of the vials in each set. The client was notified on 7/15/2016.

GC/MS VOLATILES - SW846 8260B

The following compounds were not found as part of a TIC search performed for samples J1V931, J1V932 and J1V933: Acrylamide [79-06-1]; Formaldehyde [50-00-0]; 1,3-Butadiene [106-99-0]; Chlorodifluoromethane [75-45-6]; Dichloropropanol [26545-73-3]; Trichloromethanethiol [75-70-7]; Allyl alcohol (2-Propen-1-ol) [107-18-6]; Crotonaldehyde (2-Butenaldehyde) [4170-30-3]; Epichlorohydrin [106-89-8].

The GC/MS Volatiles analyses of samples J1V932 and J1V933 were performed 3 days outside the recommended sample holding times, due to analyst oversight. The client was notified on 8/2/2016.

The preservative used in the sample containers provided is not compatible with one of the Method 8260B analytes requested. Samples J1V931, J1V932 and J1V933 were received preserved with hydrochloric acid. The requested target analyte list includes 2-chloroethyl vinyl ether, an acid-labile compound that degrades in an acidic medium.

Methylene Chloride, a common laboratory contaminant, is present in the method blank associated with batch 280-334916 at a level exceeding the reporting limit. Because this common laboratory contaminant is present in the method blank at a level that is less than five times the reporting limit, corrective action is not required.

Low levels of Methylene chloride, a common laboratory contaminant, are present in the method blank associated with batch 280-335637. Because the concentration in the method blank is not present at a level greater than the reporting limit, corrective action is deemed unnecessary.

The LCS associated with batch 280-334916 exhibited the percent recovery outside the control limits, biased high, for Methylene Chloride, and the associated sample result has been flagged "T". As Methylene Chloride is not present at a level greater than the reporting limit in the associated sample, corrective action is deemed unnecessary.

2-Chloroethyl vinyl ether was not recovered in the MS/MSD performed on sample J1V931 in batch 280-334916 due to the acid preservative used in the sample. The acceptable LCS analysis data indicated that the analytical system was operating within control; therefore, corrective action is deemed unnecessary.

Due to analyst oversight, MS/MSD analysis was not performed for batch 280-335637. Method precision and accuracy have been verified by the acceptable LCS/LCSD analysis data.

A Continuing Calibration Verification (CCV) standard associated with samples in batch 280-334916 exhibited the %Difference (%D) value outside acceptance criteria, biased low, for 1-Butanol (-50.2%). The sample associated with this CCV was non-detect for the affected analyte. All CCC and SPCC compounds are in control; therefore, method criteria have been met and corrective action is deemed unnecessary.

No other anomalies were encountered.

GC/MS SEMIVOLATILES - SW846 8270C

The following compounds were not found as part of a TIC search performed for samples J1V931 and J1V932: 1-Acetyl-2-thiourea [591-08-2]; 2,5-Diaminotoluene [95-70-5]; 2-Cyclohexyl-4,6-dinitrophenol [131-89-5]; Hexachlorophene [70-30-4].

Low levels of Benzyl alcohol are present in the method blank associated with batch 280-334208. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary. Associated sample results present above the MDL and/or RL have been flagged with a "B".

A Continuing Calibration Verification (CCV) standard associated with samples in analysis batch 280-335194 exhibited the %Difference (%D) value outside acceptance criteria, biased low, for 4-Nitroquinoline-1-oxide (-50.1%). The samples associated with this CCV were non-detect for the affected analyte. All CCC and SPCC compounds are in control; therefore, method criteria have been met and corrective action is deemed unnecessary.

No other anomalies were encountered.

GLYCOLS - SW846 8015C

Surrogate 1,4-Butanediol was recovered outside the control limits, biased low, in samples J1V931 and J1V932. The laboratory noted that this anomaly was due to obvious matrix interference; therefore, corrective action is deemed unnecessary.

No other anomalies were encountered.

METHANOL - SW846 8015C

No anomalies were encountered.

GRO - NWTPH-Gx

The samples were collected in properly preserved vials for analysis of gasoline range organics (GRO). However, when verified by the laboratory, the pH was greater than 2 and the following sample was analyzed after 7 days from sampling: J1V932 (pH = 7).

No other anomalies were encountered.

PESTICIDES - SW846 8081A

The LCS associated with batch 280-334134 exhibited percent recoveries outside the control limits, biased low, as follows: 4,4'-DDE = 72% (lower limit 74), Aldrin = 34% (lower limit 44), Heptachlor = 45% (lower limit 52). Associated sample results have been flagged with an "N". It can be noted that the spike compound recoveries and surrogate recoveries for the MS/MSD performed on sample J1V931 were in control. The laboratory re-extracted the samples, unavoidably 14 days past the 7 day recommended sample holding time. Upon re-extraction and reanalysis of the samples under batch 280-336109, the associated LCS spike compound recoveries were 100% in control, and the non-detect results were confirmed. The original analysis data have been reported as the non-detect sample results were confirmed.

No other anomalies were encountered.

PCBs - SW846 8082

No anomalies were encountered.

HERBICIDES - SW846 8151A

No anomalies were encountered.

DRO - NWTPH-Dx

Low levels of C10-C36 are present in the method blank associated with batch 280-334141. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary.

No other anomalies were encountered.

PAHs - SW846 8310

Surrogate Terphenyl-d14 recovered outside the control limits, biased low at 67% (lower limit 70%), in sample J1V931. No evidence of matrix interference was present and the sample was non-detect. It can be noted that the spike compound recoveries and surrogate recoveries for the MS/MSD performed on sample J1V931 were in control. The laboratory re-extracted the sample, unavoidably 13 days past the 7 day recommended sample holding time, and the surrogate was in control at 94% and the non-detect results were confirmed. Due to insufficient sample volume remaining, sample specific MS/MSD analysis could not be performed for the re-extract batch. The original analysis data have been reported as the non-detect sample results were confirmed and the sample specific batch MS/MSD was associated with the original analysis.

No other anomalies were encountered.

TOTAL METALS - SW846 6010B/6020/7470A

Serial dilution of a digestate in batch 280-334811 indicates that physical and chemical interferences are present for Uranium. Results have been flagged with an "X".

Low levels of Thallium are present in the method blank associated with batch 280-334811. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary.

It can be noted that the sample amount was greater than four times the spike amount for Calcium and Uranium in the Matrix Spike performed on sample J1V931; therefore, control limits are not applicable.

The duplicate analysis of sample J1V931 exhibited RPD data outside the control limits for Thallium, and the associated sample result has been flagged "M". There is no indication that the analytical system was operating out of control, and method accuracy has been verified by the acceptable LCS analysis data; therefore, corrective action is deemed unnecessary.

No other anomalies were encountered.

OIL & GREASE (HEM) - EPA 1664A

No anomalies were encountered.

ANIONS - MCAWW 300.0

The orthophosphate as P analyses for samples J1V931 and J1V932 were performed 8-9 hours outside the recommended 48 hour sample holding times. The analyses were originally performed within the sample holding times; however, due to associated continuing calibration verification (CCV) failures, reanalysis was required.

Each sample is analyzed to achieve the lowest possible reporting limits within the constraints of the method. Due to high constituent concentration, samples J1V931 and J1V932 required dilutions prior to the analysis of Nitrate as N, Chloride and Sulfate, and the associated results have been flagged with a "D". The reporting limits have been adjusted relative to the dilutions required.

The orthophosphate as P Matrix Spike performed on sample J1V931 exhibited the percent recovery outside the control limits, and the associated sample result has been flagged "N". There is no indication that the analytical system was operating out of control, and method accuracy has been verified by the acceptable LCS analysis data; therefore, corrective action is deemed unnecessary.

No other anomalies were encountered.

AMMONIA as N - MCAWW 350.1

No anomalies were encountered.

NITRATE NITRITE as N - MCAWW 353.2

Each sample is analyzed to achieve the lowest possible reporting limit within the constraints of the method. Due to high constituent concentration, samples J1V931 and J1V932 had to be analyzed at dilutions, and the associated results have been flagged with a "D". The reporting limits have been adjusted relative to the dilutions required.

The Matrix Spike performed on sample J1V931 exhibited the percent recovery outside the control limits, and the associated sample result has been flagged "N". There is no indication that the analytical system was operating out of control, and method accuracy has been verified by the acceptable LCS analysis data; therefore, corrective action is deemed unnecessary.

No other anomalies were encountered.

CHEMICAL OXYGEN DEMAND - MCAWW 410.4

No anomalies were encountered.

PHENOLICS - MCAWW 420.4

Phenolics are present at a level greater than half the reporting limit in the method blank associated with batch 280-335552. As no detectable concentrations of Phenolics are present in the associated samples, corrective action is deemed unnecessary.

No other anomalies were encountered.

TOTAL CYANIDE - SW846 9012A

Low levels of Total Cyanide are present in the method blank associated with batch 280-334663. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary.

No other anomalies were encountered.

TOTAL ORGANIC HALOGENS (TOX) - SW846 9020B

The laboratory noted that the containers submitted for samples J1V931 and J1V932 were received with excess headspace. This could cause volatile halides to evaporate, resulting in a low bias to the reported results.

Samples J1V931 and J1V932 exhibited elevated detection limits due to the limited sample volume used. The nominal sample amount could not be used due to the nature of the sample matrix.

No other anomalies were encountered.

SULFIDE - SW846 9034

No anomalies were encountered.

ALKALINITY - SM 2320B

Low levels of Alkalinity are present in the method blank associated with batch 280-333888. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary.

No other anomalies were encountered.

TOTAL DISSOLVED SOLIDS - SM 2540C

Samples J1V931 and J1V932 exhibited elevated detection limits due to the limited sample volume used. The nominal sample amount could not be used due to high constituent concentration.

No other anomalies were encountered.

TOTAL SUSPENDED SOLIDS - SM 2540D

No anomalies were encountered.

TOTAL ORGANIC CARBON - SM 5310B

No anomalies were encountered.

PH - SW846 9040B

SU = standard units

Samples J1V931 and J1V932 were analyzed 14 days after sample receipt, due to analyst oversight. It can be noted that pH is a field parameter with a holding time of 15 minutes.

No other anomalies were encountered.

SPECIFIC CONDUCTANCE - SW846 9050A

No anomalies were encountered.

1. DATA PACKAGE COMPLETENESS AND CASE NARRATIVE

Technical verification documentation present? Yes No N/A

Comments: _____

2. INSTRUMENT TUNING AND CALIBRATION (Levels D and E)

GC/MS tuning/performance check acceptable?..... Yes No N/A

Initial calibrations acceptable? Yes No N/A

Continuing calibrations acceptable? Yes No N/A

Standards traceable? Yes No N/A

Standards expired?..... Yes No N/A

Calculation check acceptable?..... Yes No N/A

Comments: _____

GC/MS ORGANIC DATA VALIDATION CHECKLIST

3. BLANKS (Levels B, C, D, and E)

Calibration blanks analyzed? (Levels D, E) Yes No N/A
 Calibration blank results acceptable? (Levels D, E) Yes No N/A
 Laboratory blanks analyzed? Yes No N/A
 Laboratory blank results acceptable? Yes No N/A
 Field/trip blanks analyzed? (Levels C, D, E) Yes No N/A
 Field/trip blank results acceptable? (Levels C, D, E) Yes No N/A
 Transcription/calculation errors? (Levels D, E) Yes No N/A
 Comments: methylene chloride - 0 all no PR

4. ACCURACY (Levels C, D, and E)

Surrogates/system monitoring compounds analyzed? Yes No N/A
 Surrogate/system monitoring compound recoveries acceptable? Yes No N/A
 Surrogates traceable? (Levels D, E) Yes No N/A
 Surrogates expired? (Levels D, E) Yes No N/A
 MS/MSD samples analyzed? Yes No N/A
 MS/MSD results acceptable? Yes No N/A
 MS/MSD standards NIST traceable? (Levels D, E) Yes No N/A
 MS/MSD standards? (Levels D, E) Yes No N/A
 LCS/BSS samples analyzed? Yes No N/A
 LCS/BSS results acceptable? Yes No N/A
 Standards traceable? (Levels D, E) Yes No N/A
 Standards expired? (Levels D, E) Yes No N/A
 Transcription/calculation errors? (Levels D, E) Yes No N/A
 Performance audit sample(s) analyzed? Yes No N/A
 Performance audit sample results acceptable? Yes No N/A
 Comments: MS + MSD - 090 2 chloroethyl vinyl ether - 100% recovery
no MS/MSD - 32 + 33 - 1 all J-31

no PR

GC/MS ORGANIC DATA VALIDATION CHECKLIST

5. PRECISION (Levels C, D, and E)

MS/MSD samples analyzed? Yes No N/A
MS/MSD RPD values acceptable? Yes No N/A
MS/MSD standards NIST traceable? (Levels D, E) Yes No N/A
MS/MSD standards expired? (Levels D, E) Yes No N/A
Field duplicate RPD values acceptable? Yes No N/A
Field split RPD values acceptable? Yes No N/A
Transcription/calculation errors? (Levels D, E) Yes No N/A

Comments: 32+33 - No ms/msd - Jall

6. SYSTEM PERFORMANCE (Levels D and E)

Internal standards analyzed? Yes No N/A
Internal standard areas acceptable? Yes No N/A
Internal standard retention times acceptable? Yes No N/A
Standards traceable? Yes No N/A
Standards expired? Yes No N/A
Transcription/calculation errors? Yes No N/A

Comments:

7. HOLDING TIMES (all levels)

Samples properly preserved? Yes No N/A
Sample holding times acceptable? Yes No N/A

Comments:

HCL used for pres - 2 ch brookly veg - etc
32+33 - over HT - Jall

GC/MS ORGANIC DATA VALIDATION CHECKLIST

8. COMPOUND IDENTIFICATION, QUANTITATION, AND DETECTION LIMITS (all levels)

| | | | |
|---|-----|----|-----|
| Compound identification acceptable? (Levels D, E) | Yes | No | N/A |
| Compound quantitation acceptable? (Levels D, E) | Yes | No | N/A |
| Results reported for all requested analyses? | Yes | No | N/A |
| Results supported in the raw data? (Levels D, E) | Yes | No | N/A |
| Samples properly prepared? (Levels D, E) | Yes | No | N/A |
| Laboratory properly identified and coded all TIC? (Levels D, E) | Yes | No | N/A |
| Detection limits meet RDL? | Yes | No | N/A |
| Transcription/calculation errors? (Levels D, E) | Yes | No | N/A |

Comments: _____

9. SAMPLE CLEANUP (Levels D and E)

| | | | |
|---|-----|----|-----|
| GPC cleanup performed? | Yes | No | N/A |
| GPC check performed? | Yes | No | N/A |
| GPC check recoveries acceptable? | Yes | No | N/A |
| GPC calibration performed? | Yes | No | N/A |
| GPC calibration check performed? | Yes | No | N/A |
| GPC calibration check retention times acceptable? | Yes | No | N/A |
| Check/calibration materials traceable? | Yes | No | N/A |
| Check/calibration materials Expired? | Yes | No | N/A |
| Analytical batch QC given similar cleanup? | Yes | No | N/A |
| Transcription/Calculation Errors? | Yes | No | N/A |

Subject: Wet Chemistry - Data Package No. J02198-TAL

INTRODUCTION

This memo presents the results of data validation on Summary Data Package No. J02198 prepared by TestAmerica Inc. (TAL). A list of the samples validated along with the analyses reported and the method of analysis is provided in the following table.

| Sample ID | Sample Date | Media | Validation | Analyte |
|------------------|--------------------|--------------|-------------------|----------------|
| J1V931 | 7/12/16 | Water | C | See note 1 |
| J1V932 | 7/12/16 | Water | C | See note 1 |

1 - IC anions by 300.0, oil & grease by 1664A, ammonia by 350.1, nitrate/nitrite by 353.2, chemical oxygen demand (COD) by 410.4, total recoverable phenolics by 420.4, cyanide by 9012A, total organic halides (TOX) by 9020B, sulfides by 9034, pH by 9040B, specific conductance by 9050A, alkalinity by 310.1, total dissolved solids by 160.1, total suspended solids by 160.2, total organic carbon (TOC) by SM 5310B.

Data validation was conducted in accordance with the WCH validation statement of work and WCH-173, Rev. 2, "Environmental Restoration Disposal Facility Leachate Sampling & Analysis Plan". Appendices 1 through 6 provide the following information as indicated below:

- Appendix 1. Glossary of Data Reporting Qualifiers
- Appendix 2. Summary of Data Qualification
- Appendix 3. Annotated Laboratory Reports
- Appendix 4. Laboratory Narrative and Chain-of-Custody Documentation
- Appendix 5. Data Validation Supporting Documentation
- Appendix 6. Additional Documentation Requested by Client

DATA QUALITY OBJECTIVES

• Holding Times & Sample Preservation

Analytical holding times are assessed to ascertain whether the holding time requirements have been met by the laboratory. The holding time requirements are as follows: 28 days for oil & grease, ammonia, phenolics, TOC, COD, bromide, chloride, fluoride, sulfate, specific conductivity, nitrate/nitrite, TOX; 14 days for cyanide, alkalinity, TDS and TSS; 7 days for sulfide; 2 days for nitrate, nitrite and orthophosphate; immediate (24 hours) for pH.

If holding times are exceeded, but not by greater than two times the limit, all associated sample results are qualified as estimates and flagged "J" for detects and "UJ" for non-

detects. If holding times are exceeded by greater than two times the limit, all associated detectable sample results are qualified as estimates and flagged "J" and all non-detects are rejected and flagged "UR".

Due to the holding time being exceeded by greater than twice the limit, all pH results were qualified as estimates and flagged "J".

Due to the holding time being exceeded by less than twice the limit, all orthophosphate results were qualified as estimates and flagged "J".

Due to the samples not being properly preserved (headspace), all TOX results were qualified as estimates and flagged "J".

All holding times and sample preservation parameters were met for all other samples.

- **Method Blanks**

Method blank analyses are performed to determine the extent of laboratory contamination introduced through sampling, sample preparation and analysis. At least one acceptable method blank analysis must be conducted for every 20 samples. No contaminants should be present in the method blank. All blank results must fall below the contract required detection limit (CRQL) to be acceptable.

Due to method blank contamination, all cyanide results were qualified as undetected and flagged "U".

All other method blank results were acceptable.

Field Blanks

No equipment blank was submitted for analysis.

- **Accuracy**

Matrix Spike Analysis & Blank Spike Analysis

Matrix spike analyses are used to assess the analytical accuracy of the reported data and the effect of the matrix on the ability to accurately quantify sample concentrations. Matrix spike recoveries must fall within the range of 75% to 125%. Samples with a spike recovery of less than 30% and a sample value below the instrument detection limit (IDL) are rejected and flagged "UR". Samples with a spike recovery of 30% to 74% and a sample result less than the IDL are qualified "UJ". Samples with a spike recovery of greater than 125% or less than 75% and a sample result greater than the

IDL are qualified "J". Finally, for samples with a spike recovery greater than 125% and a sample result less than the IDL, no qualification is required.

Due to the lack of a matrix spike analysis, all total dissolved solids, total suspended solids and alkalinity results were qualified as estimates and flagged "J".

Due to matrix spike recoveries outside QC limits, all orthophosphate (31%) and sulfide (79%) results were qualified as estimates and flagged "J".

All other accuracy results were acceptable.

- **Precision**

- Laboratory Duplicate Samples

- Laboratory duplicate sample analyses are used to measure laboratory precision and sample homogeneity. Results must be within relative percent difference (RPD) limits of plus or minus 20% for water samples. If RPD values are out of specification and the sample concentration is greater than five times the project quantitation limit (MDL) or CRQL, all associated sample results are qualified as estimated and flagged "J". If RPD values are plus or minus two times the MDL/CRQL and the sample concentration is less than five times the MDL/CRQL, all associated sample results are qualified as estimated and flagged "J/UJ". The performance criteria for aqueous laboratory duplicates are an RPD less than 20% for positive sample results greater than five times the MDL/CRQL or plus or minus the MDL/CRQL for positive sample results less than five times the MDL/CRQL. Sample results outside the criteria are qualified as estimates and flagged "J/UJ".

- All laboratory duplicate results were acceptable.

- Field Duplicate Samples

- One set of field duplicates (J1V931/J1V932) were submitted for analysis. Field duplicate results are compared using the same criteria as for laboratory duplicates. The RPD for TSS (180%) was outside QC limits. Under the WCH statement of work, no qualification is required. All other field duplicate results were acceptable.

- **Analytical Detection Levels**

- Reported analytical detection levels are compared against the minimum detection limits (MDLs) to ensure that laboratory detection levels meet the required criteria. All results met the MDLs.

• **Completeness**

The completion percentage was Data package SDG No. J02198 was submitted for validation and verified for completeness. Completeness is based on the percentage of data determined to be valid (i.e., not rejected). The completion percentage was 100%.

MAJOR DEFICIENCIES

None found.

MINOR DEFICIENCIES

The following minor deficiency was noted:

- Due to the samples not being properly preserved (headspace), all TOX results were qualified as estimates and flagged "J".
- Due to method blank contamination, all cyanide results were qualified as undetected and flagged "U".
- Due to the holding time being exceeded by greater than twice the limit, all pH results were qualified as estimates and flagged "J".
- Due to the holding time being exceeded by less than twice the limit, all orthophosphate results were qualified as estimates and flagged "J".
- Due to the lack of a matrix spike analysis, all total dissolved solids, total suspended solids and alkalinity results were qualified as estimates and flagged "J".
- Due to matrix spike recoveries outside QC limits, all orthophosphate (31%) and sulfide (79%) results were qualified as estimates and flagged "J".

Data flagged "J" indicates that the associated concentration is an estimate, but under the WCH statement of work, the data may be usable for decision-making purposes. All other validated results are considered accurate within the standard error associated with the methods.

Appendix 1
Glossary of Data Reporting Qualifiers

Qualifiers which may be applied by data validators in compliance with WCH procedures are as follows:

- U - Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.
- UJ - Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a QC deficiency identified during the data validation, the associated quantitation limit is an estimate.
- J - Indicates the compound or analyte was analyzed for and detected. The associated concentration is an estimate, but the data are usable for decision-making purposes.
- R - Indicates the compound or analyte was analyzed for, detected, and due to an identified QC deficiency, the data are unusable.
- UR - Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data is unusable due to an identified QC deficiency.
- NJ - Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).
- N - Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision-making purposes).

| J1V933 | 280-85505-3 | 8260 | 8260B |

The Uranium method substitution noted above, as agreed to by all parties, has no technical impact on the data.

I certify that this data package is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed in this Case Narrative. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or a designee, as verified by the signature on the Report Cover.

With exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. All laboratory quality control samples analyzed in conjunction with the samples in this project were within established control limits, with any exceptions noted. Calculations are performed before rounding to avoid round-off errors in calculated results.

This report includes reporting limits (RLs) less than TestAmerica Denver's practical quantitation limits. These reporting limits are being used specifically at the client's request to meet the needs of this project. Please note that data are not normally reported to these levels without qualification, since they are inherently less reliable and potentially less defensible than required by the current NELAC standards.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 7/13/2016 9:30 AM and 7/14/2016 9:25 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 4 coolers at receipt time were 1.7° C, 2.9° C, 3.4° C and 4.9° C.

Receipt Exceptions

It was noted that the VOA vials did not have labels affixed to them. There was one label for each set of VOA vials that was affixed to the bubble bag. Each label was transferred to one of the vials in each set. The client was notified on 7/15/2016.

GC/MS VOLATILES - SW846 8260B

The following compounds were not found as part of a TIC search performed for samples J1V931, J1V932 and J1V933: Acrylamide [79-06-1]; Formaldehyde [50-00-0]; 1,3-Butadiene [106-99-0]; Chlorodifluoromethane [75-45-6]; Dichloropropanol [26545-73-3]; Trichloromethanethiol [75-70-7]; Allyl alcohol (2-Propen-1-ol) [107-18-6]; Crotonaldehyde (2-Butenaldehyde) [4170-30-3]; Epichlorohydrin [106-89-8].

The GC/MS Volatiles analyses of samples J1V932 and J1V933 were performed 3 days outside the recommended sample holding times, due to analyst oversight. The client was notified on 8/2/2016.

The preservative used in the sample containers provided is not compatible with one of the Method 8260B analytes requested. Samples J1V931, J1V932 and J1V933 were received preserved with hydrochloric acid. The requested target analyte list includes 2-chloroethyl vinyl ether, an acid-labile compound that degrades in an acidic medium.

Methylene Chloride, a common laboratory contaminant, is present in the method blank associated with batch 280-334916 at a level exceeding the reporting limit. Because this common laboratory contaminant is present in the method blank at a level that is less than five times the reporting limit, corrective action is not required.

Low levels of Methylene chloride, a common laboratory contaminant, are present in the method blank associated with batch 280-335637. Because the concentration in the method blank is not present at a level greater than the reporting limit, corrective action is deemed unnecessary.

The LCS associated with batch 280-334916 exhibited the percent recovery outside the control limits, biased high, for Methylene Chloride, and the associated sample result has been flagged "T". As Methylene Chloride is not present at a level greater than the reporting limit in the associated sample, corrective action is deemed unnecessary.

2-Chloroethyl vinyl ether was not recovered in the MS/MSD performed on sample J1V931 in batch 280-334916 due to the acid preservative used in the sample. The acceptable LCS analysis data indicated that the analytical system was operating within control; therefore, corrective action is deemed unnecessary.

Due to analyst oversight, MS/MSD analysis was not performed for batch 280-335637. Method precision and accuracy have been verified by the acceptable LCS/LCSD analysis data.

A Continuing Calibration Verification (CCV) standard associated with samples in batch 280-334916 exhibited the %Difference (%D) value outside acceptance criteria, biased low, for 1-Butanol (-50.2%). The sample associated with this CCV was non-detect for the affected analyte. All CCC and SPCC compounds are in control; therefore, method criteria have been met and corrective action is deemed unnecessary.

No other anomalies were encountered.

GC/MS SEMIVOLATILES - SW846 8270C

The following compounds were not found as part of a TIC search performed for samples J1V931 and J1V932: 1-Acetyl-2-thiorurea [591-08-2]; 2,5-Diaminotoluene [95-70-5]; 2-Cyclohexyl-4,6-dinitrophenol [131-89-5]; Hexachlorophene [70-30-4].

Low levels of Benzyl alcohol are present in the method blank associated with batch 280-334208. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary. Associated sample results present above the MDL and/or RL have been flagged with a "B".

A Continuing Calibration Verification (CCV) standard associated with samples in analysis batch 280-335194 exhibited the %Difference (%D) value outside acceptance criteria, biased low, for 4-Nitroquinoline-1-oxide (-50.1%). The samples associated with this CCV were non-detect for the affected analyte. All CCC and SPCC compounds are in control; therefore, method criteria have been met and corrective action is deemed unnecessary.

No other anomalies were encountered.

GLYCOLS - SW846 8015C

Surrogate 1,4-Butanediol was recovered outside the control limits, biased low, in samples J1V931 and J1V932. The laboratory noted that this anomaly was due to obvious matrix interference; therefore, corrective action is deemed unnecessary.

No other anomalies were encountered.

METHANOL - SW846 8015C

No anomalies were encountered.

GRO - NWTPH-Gx

The samples were collected in properly preserved vials for analysis of gasoline range organics (GRO). However, when verified by the laboratory, the pH was greater than 2 and the following sample was analyzed after 7 days from sampling: J1V932 (pH = 7).

No other anomalies were encountered.

PESTICIDES - SW846 8081A

The LCS associated with batch 280-334134 exhibited percent recoveries outside the control limits, biased low, as follows: 4,4'-DDE = 72% (lower limit 74), Aldrin = 34% (lower limit 44), Heptachlor = 45% (lower limit 52). Associated sample results have been flagged with an "N". It can be noted that the spike compound recoveries and surrogate recoveries for the MS/MSD performed on sample J1V931 were in control. The laboratory re-extracted the samples, unavoidably 14 days past the 7 day recommended sample holding time. Upon re-extraction and reanalysis of the samples under batch 280-336109, the associated LCS spike compound recoveries were 100% in control, and the non-detect results were confirmed. The original analysis data have been reported as the non-detect sample results were confirmed.

No other anomalies were encountered.

PCBs - SW846 8082

No anomalies were encountered.

HERBICIDES - SW846 8151A

No anomalies were encountered.

DRO - NWTPH-Dx

Low levels of C10-C36 are present in the method blank associated with batch 280-334141. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary.

No other anomalies were encountered.

PAHs - SW846 8310

Surrogate Terphenyl-d14 recovered outside the control limits, biased low at 67% (lower limit 70%), in sample J1V931. No evidence of matrix interference was present and the sample was non-detect. It can be noted that the spike compound recoveries and surrogate recoveries for the MS/MSD performed on sample J1V931 were in control. The laboratory re-extracted the sample, unavoidably 13 days past the 7 day recommended sample holding time, and the surrogate was in control at 94% and the non-detect results were confirmed. Due to insufficient sample volume remaining, sample specific MS/MSD analysis could not be performed for the re-extract batch. The original analysis data have been reported as the non-detect sample results were confirmed and the sample specific batch MS/MSD was associated with the original analysis.

No other anomalies were encountered.

TOTAL METALS - SW846 6010B/6020/7470A

Serial dilution of a digestate in batch 280-334811 indicates that physical and chemical interferences are present for Uranium. Results have been flagged with an "X".

Low levels of Thallium are present in the method blank associated with batch 280-334811. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary.

It can be noted that the sample amount was greater than four times the spike amount for Calcium and Uranium in the Matrix Spike performed on sample J1V931; therefore, control limits are not applicable.

The duplicate analysis of sample J1V931 exhibited RPD data outside the control limits for Thallium, and the associated sample result has been flagged "M". There is no indication that the analytical system was operating out of control, and method accuracy has been verified by the acceptable LCS analysis data; therefore, corrective action is deemed unnecessary.

No other anomalies were encountered.

OIL & GREASE (HEM) - EPA 1664A

No anomalies were encountered.

ANIONS - MCAWW 300.0

The orthophosphate as P analyses for samples J1V931 and J1V932 were performed 8-9 hours outside the recommended 48 hour sample holding times. The analyses were originally performed within the sample holding times; however, due to associated continuing calibration verification (CCV) failures, reanalysis was required.

Each sample is analyzed to achieve the lowest possible reporting limits within the constraints of the method. Due to high constituent concentration, samples J1V931 and J1V932 required dilutions prior to the analysis of Nitrate as N, Chloride and Sulfate, and the associated results have been flagged with a "D". The reporting limits have been adjusted relative to the dilutions required.

The orthophosphate as P Matrix Spike performed on sample J1V931 exhibited the percent recovery outside the control limits, and the associated sample result has been flagged "N". There is no indication that the analytical system was operating out of control, and method accuracy has been verified by the acceptable LCS analysis data; therefore, corrective action is deemed unnecessary.

No other anomalies were encountered.

AMMONIA as N - MCAWW 350.1

No anomalies were encountered.

NITRATE NITRITE as N - MCAWW 353.2

Each sample is analyzed to achieve the lowest possible reporting limit within the constraints of the method. Due to high constituent concentration, samples J1V931 and J1V932 had to be analyzed at dilutions, and the associated results have been flagged with a "D". The reporting limits have been adjusted relative to the dilutions required.

The Matrix Spike performed on sample J1V931 exhibited the percent recovery outside the control limits, and the associated sample result has been flagged "N". There is no indication that the analytical system was operating out of control, and method accuracy has been verified by the acceptable LCS analysis data; therefore, corrective action is deemed unnecessary.

No other anomalies were encountered.

CHEMICAL OXYGEN DEMAND - MCAWW 410.4

No anomalies were encountered.

PHENOLICS - MCAWW 420.4

Phenolics are present at a level greater than half the reporting limit in the method blank associated with batch 280-335552. As no detectable concentrations of Phenolics are present in the associated samples, corrective action is deemed unnecessary.

No other anomalies were encountered.

TOTAL CYANIDE - SW846 9012A

Low levels of Total Cyanide are present in the method blank associated with batch 280-334663. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary.

No other anomalies were encountered.

TOTAL ORGANIC HALOGENS (TOX) - SW846 9020B

The laboratory noted that the containers submitted for samples J1V931 and J1V932 were received with excess headspace. This could cause volatile halides to evaporate, resulting in a low bias to the reported results.

Samples J1V931 and J1V932 exhibited elevated detection limits due to the limited sample volume used. The nominal sample amount could not be used due to the nature of the sample matrix.

No other anomalies were encountered.

SULFIDE - SW846 9034

No anomalies were encountered.

ALKALINITY - SM 2320B

Low levels of Alkalinity are present in the method blank associated with batch 280-333888. Because the concentration in the method blank is not present at a level greater than half the reporting limit, corrective action is deemed unnecessary.

No other anomalies were encountered.

TOTAL DISSOLVED SOLIDS - SM 2540C

Samples J1V931 and J1V932 exhibited elevated detection limits due to the limited sample volume used. The nominal sample amount could not be used due to high constituent concentration.

No other anomalies were encountered.

TOTAL SUSPENDED SOLIDS - SM 2540D

No anomalies were encountered.

TOTAL ORGANIC CARBON - SM 5310B

No anomalies were encountered.

PH - SW846 9040B

SU = standard units

Samples J1V931 and J1V932 were analyzed 14 days after sample receipt, due to analyst oversight. It can be noted that pH is a field parameter with a holding time of 15 minutes.

No other anomalies were encountered.

SPECIFIC CONDUCTANCE - SW846 9050A

No anomalies were encountered.

1. DATA PACKAGE COMPLETENESS AND CASE NARRATIVE

Technical verification documentation present? Yes **No** N/A

Comments: _____

2. INSTRUMENT PERFORMANCE AND CALIBRATIONS (Levels D and E)

Initial calibrations performed on all instruments? Yes No **N/A**

Initial calibrations acceptable? Yes No **N/A**

ICV and CCV checks performed on all instruments? Yes No **N/A**

ICV and CCV checks acceptable? Yes No **N/A**

Standards traceable? Yes No **N/A**

Standards expired? Yes No **N/A**

Calculation check acceptable? Yes No **N/A**

Comments: _____

GENERAL CHEMISTRY ANALYSIS DATA VALIDATION CHECKLIST

3. BLANKS (Levels B, C, D, and E)

ICB and CCB checks performed for all applicable analyses? (Levels D, E)..... Yes No N/A
 ICB and CCB results acceptable? (Levels D, E) Yes No N/A
 Laboratory blanks analyzed? Yes No N/A
 Laboratory blank results acceptable?..... Yes No N/A
 Field blanks analyzed? (Levels C, D, E) Yes No N/A
 Field blank results acceptable? (Levels C, D, E) Yes No N/A
 Transcription/calculation errors? (Levels D, E)..... Yes No N/A
 Comments: cyano - J all no P1

4. ACCURACY (Levels C, D, and E)

Spike samples analyzed? Yes No N/A
 Spike recoveries acceptable? Yes No N/A
 Spike standards NIST traceable? (Levels D, E)..... Yes No N/A
 Spike standards expired? (Levels D, E)..... Yes No N/A
 LCS/BSS samples analyzed? Yes No N/A
 LCS/BSS results acceptable?..... Yes No N/A
 Standards traceable? (Levels D, E)..... Yes No N/A
 Standards expired? (Levels D, E) Yes No N/A
 Transcription/calculation errors? (Levels D, E)..... Yes No N/A
 Performance audit sample(s) analyzed? Yes No N/A
 Performance audit sample results acceptable?..... Yes No N/A
 Comments: Ortho phosphate - gcs - 3170 - J all
Subside - LCS - 770 - J all
no ms - ~~scan~~ TSS TDS g/calc - J no P1

GENERAL CHEMISTRY ANALYSIS DATA VALIDATION CHECKLIST

5. PRECISION (Levels C, D, and E)

- Duplicate RPD values acceptable? Yes No N/A
- Duplicate results acceptable? Yes No N/A
- MS/MSD standards NIST traceable? (Levels D, E) Yes No N/A
- MS/MSD standards expired? (Levels D, E) Yes No N/A
- Field duplicate RPD values acceptable? Yes No N/A
- Field split RPD values acceptable? Yes No N/A
- Transcription/calculation errors? (Levels D, E) Yes No N/A

Comments: TSS - 18070 - FD

6. HOLDING TIMES (all levels)

- Samples properly preserved? Yes No N/A
- Sample holding times acceptable? Yes No N/A

Comments: Orthophosphate - < 2x - Jall
pH - Jall 2x
Tox - headspace - Jall

GENERAL CHEMISTRY ANALYSIS DATA VALIDATION CHECKLIST

7. RESULT QUANTITATION AND DETECTION LIMITS (all levels)

- Results reported for all requested analyses? Yes No N/A
- Results supported in the raw data? (Levels D, E)..... Yes No N/A
- Samples properly prepared? (Levels D, E)..... Yes No N/A
- Detection limits meet RDL? Yes No N/A
- Transcription/calculation errors? (Levels D, E)..... Yes No N/A
