---	--	--------------------------------

This form documents agreement among parties listed authorizing classification of the subject unit as Closed Out, Interim Closed Out, No Action, RCRA Postclosure, Rejected, or Consolidated. This form also authorizes backfill of the waste management unit, if appropriate, for Closed Out and Interim Closed out units. Final removal from the NPL of No Action and Closed Out waste management units will occur at a future date.

Description of Current Waste Site Conditions:

(Summarize status of investigation/remediation of the waste sites.)

The ash pit is a large open depression located east of the 284-E Powerhouse. It is divided into two parts by an earthen dam. The pit currently contains only a small amount ash.

Basis for Reclassification:

(For closeout, reference supporting documentation, as listed in Table 3.)

A waste determination of the Hanford Site 200 Area steam plant ash was performed in the early 1990s. The waste stream was determined to be nondangerous. Samples were analyzed using the TCLP (Toxicity Characteristic Leaching Procedure), and all were below the regulatory limits. The pH of the samples ranged from 7.66 to 11.91, with an average of 9.27.

This site was originally reclassified to "No Action" on 5/6/2004. It is requested that the reclassification status be re-evaluated to a status of "Rejected". The Rejected status will preclude carrying the site forward through the CERCLA process.
