Description of Current Waste Site Conditions:

(Summarize status of investigation/remediation of the waste sites.)

On March 4, 1980, the Radiation Monitoring group, using a truck mounted road monitor, detected a high background on the dirt road to the Dry Waste Burial Ground from the 241-BX Tank Farm. A follow-up survey revealed bits and pieces of a crushed tumbleweed spread over about 22.9 meters (75 feet) of roadway. The maximum beta/gamma radiation was 100,000 counts per minute. Operations were notified and the roadway was immediately cleaned up. No other contaminated weeds were found. A field walkdown in February 1998 found no visual evidence of this unplanned release.

Basis for Reclassification:

(For closeout, reference supporting documentation, as listed in Table 3.)

UPR-200-E-58 was Reclassified to No Action in 2004. This site is listed on Table A-2a, 200-UR-1 Operable Unit Waste Sites That are Identified as Rejected or No Action, DOE/RL-2004-39, Rev. 0, 200-UR-1 Unplanned Release Waste Group Operable Unit Remedial Investigation/Feasibility Study Work Plan. In 2007 the definitions for "Rejected" and "No Action" were revised. The classification of this site should be changed to "Rejected" to align with the revised definitions in the TPA-MP-14 procedure.
