Description of Current Waste Site Conditions:

(Summarize status of investigation/remediation of the waste sites.)

UPR-200-W-159 occurred when an unknown amount of 50% aqueous sodium hydroxide, a corrosive liquid, was spilled onto the ground near the Plutonium Finishing Plant. The spill of 50% aqueous sodium hydroxide to the soil was removed and disposed of as hazardous waste in May 1985. Sodium hydroxide, in the presence of air and water, rapidly converts to sodium carbonate. Thus, any sodium hydroxide that might have remained after soil removal will no longer be at the site.

Basis for Reclassification:

(For closeout, reference supporting documentation, as listed in Table 3.)

UPR-200-W-159 was Reclassified to No Action in 2004. This site is listed on Table A-2a, 200-UR-1 Operable Unit Waste Sites That are Identified as Rejected or No Action, DOE/RL-2004-39, Rev. 0, 200-UR-1 Unplanned Release Waste Group Operable Unit Remedial Investigation/Feasibility Study Work Plan. In 2007 the definitions for "Rejected" and "No Action" were revised. The classification of this site should be changed to "Rejected" to align with the revised definitions in the TPA-MP-14 procedure.
