

Waste Site Reclassification Form

| | | |
|---|---|---------------------------------|
| Date Submitted: 07/29/2010 Originator: CR Webb Phone: 373-5573 | Operable Units: 200-CW-1 Waste Site ID: 200-E-126-PL Type of Reclassification Action: Closed Out: <input type="checkbox"/> Interim Closed Out: <input type="checkbox"/> No Action: <input type="checkbox"/> RCRA Postclosure: <input type="checkbox"/> Rejected: <input checked="" type="checkbox"/> Consolidated: <input type="checkbox"/> | Control Number: 2010-070 |
|---|---|---------------------------------|

This form documents agreement among parties listed authorizing classification of the subject unit as Closed Out, Interim Closed Out, No Action, RCRA Postclosure, Rejected, or Consolidated. This form also authorizes backfill of the waste management unit, if appropriate, for Closed Out and Interim Closed Out units. Final removal from the NPL of No Action and Closed Out waste management units will occur at a future date.

Description of Current Waste Site Conditions:

(Summarize status of investigation/remediation of the waste sites.)

The pipeline conveyed B Plant effluent to the 216-B-3 Pond and Ditch system. B Plant cooling water effluent was originally routed through the 207-B Retention Basin to the 216-B-2-1, 216-B-2-2 and 216-B-2-3 ditches. In 1987, the 216-B-2-3 ditch was closed and was replaced by this, 22 inch diameter plastic underground pipeline. It extended from the 207-B basin to Diverter Station #2. By 1994, all of the open ditches (216-B-2-1, 216-B-2-2, 216-B-2-3, 216-B-3-1, 216-B-3-2 and 216-B-3-3) had been backfilled and surface stabilized. After 1994, all the effluent was conveyed to the 216-B-3A and 216-B-3C pond lobes only through underground pipelines. In 1995 the ponds were closed. The remaining effluent was transferred the Treated Effluent Disposal Facility (TEDF). Parts of the pipelines east of 200 East Area, that had fed the ponds, were re-used to feed the TEDF disposal basin. The TEDF portion begins at Manhole #8 and extends to Pump Station #3. In the event of a failure at Pump Station #3, the effluent can be routed to 216-B-3C (C lobe). The section that connects the southeast corner of 216-B-3A to the northwest corner of 216-B-3C is constructed of 76 centimeter (30 inch) corrugated metal pipe.

Basis for Reclassification:

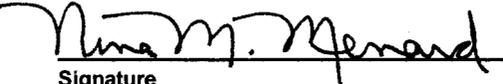

(For closeout, reference supporting documentation, as listed in Table 3.)

Due to the restructuring of Operable Units, as described in the Tentative Agreement for Central Plateau Cleanup, this pipeline has been split into segments. This site is being Rejected because it is being replaced with two separate WIDS sites (200-E-126-PL-A and 200-E-126-PL-B).

Waste Site Controls

Engineered Controls: Yes No Institutional Controls: Yes No O&M requirements: Yes No

If any of the Waste Site Controls are checked Yes specify control requirements including reference to the Record of Decision, TSD Closure Letter, or other relevant documents.
