

### WASTE SITE RECLASSIFICATION FORM

Operable Unit: 100-IU-6

Control No.: 2012-044

Waste Site Code(s)/Subsite Code(s):

600-313, Burned Area and Oil Stained Soil

Reclassification Category: Interim  Final Reclassification Status: Closed Out  No Action  Rejected RCRA Postclosure  Consolidated  None Approvals Needed: DOE  Ecology  EPA **Description of current waste site condition:**

The 600-313, Burned Area and Oil Stained Soil waste site is located in the 100-IU-6 Operable Unit of the Hanford Site and consisted of potentially contaminated soil that was either an oil stain or burned area. The 600-313 waste site is located approximately 0.53 km (0.33 mi) north and 0.29 km (0.18 mi) west of the intersection of F Avenue and Route 2 North, and was identified as a remaining site for remediation in the *Explanation of Significant Differences for the 100 Area Remaining Sites Interim Remedial Action Record of Decision, Hanford Site, Benton County, Washington*, U.S. Environmental Protection Agency, Region 10, Seattle, Washington (EPA 2009). Remediation of the 600-313 waste site occurred on May 16, 2012. The remediation resulted in approximately 21.1 bank cubic meters (30 bank cubic yards) of material being removed and disposed at the Environmental Restoration Disposal Facility (ERDF).

Cleanup verification sampling was performed on May 30, 2012, to determine if the waste site meets remedial action objectives (RAOs) and remedial action goals (RAGs) established by the *Interim Action Record of Decision for the 100-BC-1, 100-BC-2, 100-DR-1, 100-DR-2, 100-FR-1, 100-FR-2, 100-HR-1, 100-HR-2, 100-KR-1, 100-KR-2, 100-IU-2, 100-IU-6, and 200-CW-3 Operable Units, Hanford Site, Benton County, Washington* (Remaining Sites ROD), U.S. Environmental Protection Agency, Region 10, Seattle, Washington (EPA 1999). The selected remedy involved (1) excavating the site to the extent required to meet specified soil cleanup levels, (2) disposing of contaminated excavation materials at ERDF at the 200 Area of the Hanford Site, (3) demonstrating through verification sampling that cleanup goals have been achieved, and (4) proposing the site for reclassification as Interim Closed Out.

**Basis for reclassification:**

Cleanup verification sampling results were evaluated in comparison to the RAGs. In accordance with this evaluation, the verification sampling results support a reclassification of the 600-313 waste site to Interim Closed Out. The current site conditions achieve the RAOs and RAGs established by the Remaining Sites ROD (EPA 1999). The results of verification sampling do not preclude any future uses (as bounded by the rural-residential scenario) and allow for unrestricted use of shallow zone soils (i.e., surface to 4.6 m [15 ft] deep). The analytical results and rationale presented in the attached remaining sites verification package also demonstrate that residual contaminant concentrations meet direct exposure cleanup criteria and are protective of groundwater and the Columbia River. The waste site contamination does not extend into the deep zone soils. Institutional controls to prevent uncontrolled drilling or excavation into the deep zone soil are not required. The basis for reclassification is described in detail in the *Remaining Sites Verification Package for the 600-305, Suspect Asbestos Containing Material Sites; 600-308, Garnet Sand; 600-309, Burn Site #3; 600-310, Burn Site #4; 600-311, Burn Site #5; 600-312, Burn Site #6; 600-313, Burned Area and Oil Stained Soil; 600-314, Telecommunications Components; 600-317, Battery and Burn Area; 600-319, Miscellaneous Debris; and 600-324, Burnt Debris Area* (attached).
