3. Comment:

Determination of asbestos containing material (ACM) left in place and abated during demolition is based on a Quality Assurance review of project documentation and interviews with activity personnel. As part of routine CERCLA activities after removal activities were conducted, a field walk down was conducted of the area in question. If visible pieces of asbestos containing material (ACM) were located on the surface or within the first few inches of soil, an attempt was made to remove the material. TPA-MP-14 process requires hazardous and/or radiological material not removed within 90-days of discovery be entered into the WIDS database. It has not been verified that all of the ACM at this location has been removed.

4. Is the site a Solid Waste Management Unit?

Any discernible location at the Facility where solid wastes have been placed at any time, irrespective of whether the location was intended for the management of solid or dangerous waste, and includes any area at the Facility at which solid wastes have been routinely and systematically released (for example through spills), and includes dangerous waste treatment, storage, and disposal units.
