Issue

Hanford Facility RCRA Permit modifications for the 1301-N, 1325-N, 1324-N, and 1324-NA need to be approved by the Department of Energy and submitted to Washington State Department of Ecology for approval.

Background

The permit modifications to the 1301-N and 1325-N TSDs are being proposed to extend the remediation schedule from 2003 to 2005. This change accommodates the expanded area of contamination that has been encountered at the waste site. Further remediation is required to meet the clean up standards.

The permit modifications to the 1324-N and 1324-NA TSDs are being made to include the closure plan revision number in the permit chapter. Ecology has requested this addition be made to reflect consistency between the permit and the certification of closure that was completed for the 1324-N and 1324-NA TSDs.

The Washington State Department of Ecology has reviewed the modification and indicated they would approve them.

Discussion

Ecology approval of the schedule extension for the 1301-N and 1325-N TSD closure activities is necessary to maintain compliance with the Hanford Facility RCRA Permit.

The permit modifications to the 1324-N and 1324-NA TSDs are an administrative change, but will assist Ecology in their approval of the certification of closure for the 1324-N and 1324-NA TSDs.
