SUBJECT: WASTE WATER PILOT PLANT INFORMATION

Attached are two copies of the puncture resistance test method (Method 2031) used by the vendor on the secondary containment liner. This completes the submittal of the list of procedures that you requested in the June 15, 1992 teleconference.

Work is continuing on the calculations that you requested. The foundation situation is still being examined.

The additional information you requested will be addressed by inclusion in the page changes. This information includes the following :

- All liner seams will be completed in the factory
- A liner coupon program will be included
- Maximum time the tank trailer will be at the loading/unloading areas
- Testing of the actual liner material by ASTM D 751 method.

This additional material will be forwarded to you in the near future. If you have any comments or questions, please call me at (509) 376-9333 or Rodger Bowman at (509) 376-4876.
