To the Tri-Party Agencies,

I applaud your coordinated efforts to address the environmental risks at Hanford posed by the radioactive elements classified as TRU beginning in 1970. It seems that those same elements, generated before 1970, pose the same environmental risks. If this approach is right for TRU, then it should be right for the elements that this classification defines, without respect for generation date. Conversely, if the approach for treatment of pre-1970 TRU (forgive the term, you know what I mean) is good enough, then the same should be good enough for post-1970 TRU. I urge the Agencies to agree on what is the right approach, and to follow that approach consistently.

Regards,
Cal Rinne
