

Waste Site Reclassification Form

<p>Date Submitted: 3/14/2005</p> <p>Originator: CR Webb</p> <p>Phone: 373-5573</p>	<p>Operable Unit(s): 200-PO-3</p> <p>Waste Site ID: UPR-200-E-86</p> <p>Type of Reclassification Action:</p> <p>Rejected: <input checked="" type="radio"/></p> <p>No Action: <input type="radio"/></p> <p>Interim Closed Out: <input type="radio"/></p> <p>Closed Out: <input type="radio"/></p>	<p>Control Number: 2005-012</p>
---	---	--

This form documents agreement among the parties listed below authorizing classification of the subject unit as rejected, closed-out, or no action and authorizing backfill of the site, if appropriate. Final removal from the NPL of no action or closed-out sites will occur at a future date.

Description of current waste site condition:

In 1971, routine line (leak detection) monitoring equipment detected a leak in the vicinity of transfer line number 812. Line 812 was being used to transfer process waste (containing approximately 25,000 curies of cesium-137) from the 244-AR Vault to the 241-C Tank Farm. In 1971, eight wells were drilled around the leak to define the release area. In 1972, three wells were drilled through the contaminated area to determine the depth of the release. Contamination was not found below the 6.1-meter (20-foot) level on any of the wells. In 1995, an area measuring approximately 6 by 6 meters (20 by 20 feet) was covered with shotcrete. The area is currently marked with concrete AC-540 posts and Underground Radioactive Material signs at each corner.

Basis for reclassification:

Transfer line 812 is part of the pipeline known as WIDS sitecode 200-E-153 PL. This Unplanned Release should be reclassified to Rejected (Consolidated) with the 200-E-153 PL pipeline.
