Jack-

Sounds like a good plan to me. Thanks for keeping me posted.

Dave Einan

It may be expensive to live on Earth, but it does include a free trip around the sun!

Horseshoe Landfill Additional
Excavation and Sampling Approach

RECEIVED

EDMC

Good afternoon Dave:

As we spoke this morning and you approved, below is the outline of our path forward at horseshoe and an update. Thanks again for your approval. If you could send an email reply back for our files that would be greatly appreciated.

Of the fourteen sample locations, three had total DDD/DDT/DDE concentrations greater than 0.75 ppm. Our approach is to perform additional excavations at the 3 sample locations that failed, and performing the verification sampling at those 3 exact locations following the additional excavation, and using the new data from these 3 locations in the statistical evaluation. This is consistent with the sampling guidance as it allow for alternate sampling approaches should some data exceed the 95% UCL. Wendy Thompson and the rest of the team believes this is the best approach, as you specifically asked if Wendy agreed with the approach.

Thanks again.

Debbi,

After much debate, RL has decided that it would be in our best interest to place the EPA "Memo-to-File Documenting Non-Significant Changes to the 1100 Area ROD" in the admin record. Jack Donnelly (BHI) has a copy of the memo and will get it to you. Thanks for your patience and support.

Jamie

Hi Jamie,

Hope all is well. Regarding the Non Significant Changes to the 1100-EM-1 ROD, you were going to send Debbi Isom (keeper of the AR) a one liner on the decision to place the documents in the AR (and not the Post Decisional File). Know you are swamped but, could you send her something for her files.

Thanks, Ron
