I'm OK with approach described. I don't think we need to meet.

Jack,

I think what you were trying to say in the 1st sentence of your 2nd paragraph is that we're probing the edge of the excavations to see if we're into one of the 6 disturbed subsurface areas identified during the original site investigation. I'm not aware of an "undiscovered solid waste disposal cell". We're just dealing with the left-overs from previous disposal activities (i.e. non-hazardous solid wastes). Am I correct?

purposes the MTCA three part test will be applied separately to each population/strata.

Respectfully, Jack Donnelly

Good morning:

The project plans to be in the field today on doing the additional excavations as already approved. We still need to get your feedback, expectations, and approval on the sampling approach in the 3 hot spots (2 areas) that I sent you via email based on the debris. We are available to meet if necessary.

I think the project plans to dig slightly deeper and wider to verify the existence or non existence of an undiscovered solid waste disposal cell. I spoke with Jamie this morning and he gave me permission to speak with you directly and determine our path, and ensure you are updated on the project status. Jamie is swamped so I am doing my best to ensure everyone is updated and advised.

Please let me know.

Respectfully, Jack Donnelly 373-9299

Debbi,

After much debate, RL has decided that it would be in our best interest to place the EPA "Memo-to-File Documenting Non-Significant Changes to the 1100 Area ROD" in the admin record. Jack Donnelly (BHI) has a copy of the memo and will get it to you. Thanks for your patience and support.

Jamie

Hi Jamie,

Hope all is well. Regarding the Non Significant Changes to the 1100-EM-1 ROD, you were going to send Debbi Isom (keeper of the AR) a one liner on the decision to place the documents in the AR (and not the Post Decisional File). Know you are swamped but, could you send her something for her files.

Thanks, Ron
