Waste Site Reclassification Form

Date Submitted: 3/10/2000	Operable Unit(s): 200-CW-5	Control Number: 2000-013
Originator: Jim Golden	Waste Site ID: 200-W PP	
Phone: 376-6961	Type of Reclassification Action:	
	Rejected <input checked="" type="radio"/>	
	Closed-Out <input type="radio"/>	
	No Action <input type="radio"/>	

This form documents agreement among the parties listed below authorizing classification of the subject unit as rejected, closed-out, or no action and authorizing backfill of the site, if appropriate. Final removal from the NPL of no action or closed-out sites will occur at a future date.

Description of current waste site condition:

The sides and bottom are covered with cobbles. The head wall and the spillway between the basins are made of concrete. Prior to the construction of the Powerhouse Pond, the head end of the 216-U-14 Ditch occupied this location. The Powerhouse Pond was constructed over a portion of the 216-U-14 Ditch when the ditch was deactivated and stabilized.

Basis for reclassification:

In developing the work plan for the 200-CW-5 Operable Unit, all of the potential contaminants of concern from each facility that discharged to the 216-U-14 Ditch were included in the Data Quality Objectives effort. Because the contaminants of concern included those that discharged to the Powerhouse Pond, and since the pond covers part of the same area (the head end) of the 216-U-14 Ditch, it has been consolidated with the ditch.
