LOCKHEED MARI

The attached data report contains the analytical results of samples that were submitted to Lockheed Analytical Services on 21 May 1996.

The temperature of the cooler upon receipt was 2°C. Sample containers received agree with the chain-of-custody documentation. Sample containers were received intact. Samples designated for hexachrome analysis were not received in time to meet the analytical holding time requirements.

The case narratives included in the following attachments provide a detailed description of all events that occurred during sample preparation, analysis, and data review specific to the samples and analytical methods requested.

A list of data qualifiers, chain-of-custody forms, sample receiving checklist, and log-in report are also enclosed representing the samples received within this group.

If you have any questions concerning the analysis or the data please call Kathleen Hall at (509) 375-4741.

Release of this data report has been authorized by the Laboratory Director or the Director's designee as evidenced by the following signature.

" I certify that this data package is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manger or a designee, as verified by the following signature."

Sincerely,

for

Kathleen M. Hall Client Services Representative

### CASE NARRATIVE INORGANIC NON METALS ANALYSES

The routine calibration and quality control analyses performed for this batch include as applicable: initial and continuing calibration verification, initial and continuing calibration blanks, method blank(s), laboratory control sample(s), matrix spike (predigestion) sample(s), duplicate sample(s).

### **Preparation and Analysis Requirements**

 One water sample was received for LK7072 and analyzed in batch 521 bh for selected analytes as requested on the chain of custody. Quality control analysis was performed on the following samples:

| Client ID | LAL #   |         | Method                   |  |
|-----------|---------|---------|--------------------------|--|
| BOHD22    | L7072-3 | MS, DUP | 7196 Hexavalent Chromium |  |

### Holding Time Requirements

• All samples were received and analyzed outside of the method-specific holding times. The associated samples are flagged with an "H".

### Method Blanks

• The concentration levels of all the requested analytes in the method blank were below the reporting detection limits.

### Internal Quality Control

All Internal Quality Control were within acceptance limits.

Kay McCann Prepared By <u>May 24, 1996</u> Date

Log-in No.: L7072 Quotation No.: Q400000-B SAF: B96-092 Document File No.: 0521596 BHI Document File No.: 370 SDG No.: LK7072 Page3

### CASE NARRATIVE INORGANIC METALS ANALYSES

The routine calibration and quality control analyses performed for this batch include as applicable: instrument tune (ICP/MS only), initial and continuing calibration verification, initial and continuing calibration blanks, method blank(s), laboratory control sample(s), ICP interference check samples (ICP only), serial dilutions, analytical (post-digestion) spike samples, matrix spike (predigestion) sample(s), duplicate sample(s).

### Preparation and Analysis Requirements

All samples were received on May 21, 1996. The samples were logged in as L7072 and were prepared and analyzed in batch 521 bh. The samples were analyzed by Method 200.7 ICP Metals.

### Holding Time Requirements

• All samples were analyzed within the method-specific holding times.

### Method Blanks

• The concentration levels of all the requested analytes in the method blank were below the reporting detection limits.

### Internal Quality Control

• All Internal Quality Control were within acceptance limits.

Shellee McGrath Prepared By June 17, 1996 Date š., 1.

# Lockheed Analytical Services DATA QUALIFIERS FOR INORGANIC ANALYSES

[Revised 08/28/92]

| r  |   |  |  |  |  |  |  |
|--|---|--|--|--|--|--|--|
| For Use on the Analytical Data Reporting Forms |   |  |  |  |  |  |  |
| В  | For CLP Analyses Only Reported value is less than the contract required detection limit (CRDL) but greater than or equal to the instrument detection limit (IDL).                       |  |  |  |  |  |  |
| С  | For Routine, Non-CLP Analyses Only Any constituent that was also detected in the associated blank whose concentration was greater than the reporting detection limit (RDL).             |  |  |  |  |  |  |
| D  | Presence of high levels of interfering constituents required dilution of sample which increased the RDL by the dilution factor.   |  |  |  |  |  |  |
| E  | Estimated value due to presence of interference.  |  |  |  |  |  |  |
| Н  | Sample analysis performed outside of method-or client-specified maximum holding time requirement.   |  |  |  |  |  |  |
| М  | For CLP Analyses Only Duplicate injection precision criterion was not met.  |  |  |  |  |  |  |
| N  | Matrix spike recovery exceeded acceptance limits.   |  |  |  |  |  |  |
| S  | Reported value was determined from the method of standard addition.   |  |  |  |  |  |  |
| U  | For CLP Reporting Only Constituent was analyzed for but not detected (sample quantitation must be corrected for dilution and percent moisture).   |  |  |  |  |  |  |
| W  | For AAS Only Post-digestion spike for Furnace AAS did not meet acceptance criteria and sample absorbance is less than 50% of spike absorbance.  |  |  |  |  |  |  |
| X, Y, or Z                                     | Analyst-defined qualifier.  |  |  |  |  |  |  |
| *  | Relative percent difference (RPD) for duplicate analysis exceeded acceptance limits.  |  |  |  |  |  |  |
| +  | Correlation coefficient (r) for the MSA is less than 0.995.   |  |  |  |  |  |  |
| For Use on the QC Data Reporting Forms         |   |  |  |  |  |  |  |
| a <sup>1</sup>                                 | The spike recovery and/or RPD for matrix spike and matrix spike duplicates cannot be evaluated due to insufficient spiking level compared to the elevated sample analyte concentration. |  |  |  |  |  |  |
| $\mathbf{b}^{1}$                               | The RPD cannot be computed because the sample and/or duplicate concentration was below the RDL.   |  |  |  |  |  |  |

<sup>1</sup> Used as footnote designations on the QC summary form.

### SUBJECT: Total Activities for Off-Site Shipments of Groundwater Samples to NRC Licensed Laboratories

There is no need to perform total activities prior to offsite shipment to NRC licensed labs of samples taken from ground water wells located on the Hanford Site.

All wells reviewed to date for radiological content have shown no well with a total activity in excess of 2,000,000 pCi/l (2,000 pCi/gm), the Department Of Transportation limit for radioactive material. The highest activity in any known well is 1.56 X 10<sup>6</sup> pCi/l H<sup>3</sup>.

While this does not constitute any release from radiological controls for worker protection, it does allow samples to be shipped based on historical laboratory data and save the expense of doing radiochemical analysis.

A copy of the most recent analytical data should be provided to the NRC licensed laboratory with the samples being shipped or if no data is available for new wells, the most recent data from adjacent wells.

0012

### NON-RADIOLOGICAL SHIPMENT RELEASE

The contents of this shipment  $\frac{4Wae + 0 + 0640 + 45}{2}$  have been reviewed and contains no radioactive material and therefore, are not subject to radiological control requirements.

Sample Login Login Review Checklist

Lot Number 17072

The login review should be conducted by that person logging in the samples as well as a peer. Please use this checklist to ensure that such reviews occur in a uniform basis. Please sign and date below to verify that a login review has occurred. This checklist should be affixed to each login package prior to distribution.

For effective login review, at a minimum, five reports form the login process are required. These are the COC (or equivalent), the login COC report, the sample summary report, the sample receiving checklist, and the login quotation. Before beginning review, ensure that these five components are available. Jobs with single component samples, the sample summary report may be omitted.
