Meeting Summary and Summary of Commitments and Agreements
Aggregate Area Status
June 19, 1991

Aggregate Area Negotiation Status

1. Alan Krug (WHC) gave an update on progress toward completing the Aggregate Area Management Strategy (see Attachment #4). Several activities that could not be worked out in time to be included in the TPA Change Package are identified in Attachment #4. One of these activities is the study of the effects of the Columbia River on the hydrology and contaminant migration within the 100 Areas. This study will pull together parts of five different work plans in order to produce one study from five previously planned studies. Merl Lauterbach (WHC) is in charge of the 100 area activities and Rich Carlson (WHC) is in charge of the 200 area activities. Changes were made in the work plan milestone dates and in which work plans were due. Also, the first ten 100 Area work plans will be rescoped. Mr. Lauterbach said that it must be determined whether or not work plans will be completed for each of these operable units.
2. Merl Lauterbach said the budget and schedule for drilling activities should be completed by the end of June 1991. The information will be included in the integrated schedule.

100 Area Wetlands

3. Steve Weiss (WHC) gave a presentation on the 100 Area Wetlands. Aquatic sampling of algae and Caddis Fly larvae is planned near the 100-HR-3 operable unit. This has been extremely difficult due to the river not being at the correct level. Therefore, it is planned that four samples be collected between mid-summer and winter when the river is at a lower level. Four samples of algae and Caddis Fly larvae are also planned to be collected from the N Springs Area. Due to high water levels only 2 samples have been collected.
