

### DISCOVERY SITE EVALUATION CHECKLIST

1. **WIDS Site Code/Subsite Code:** 200-W-55

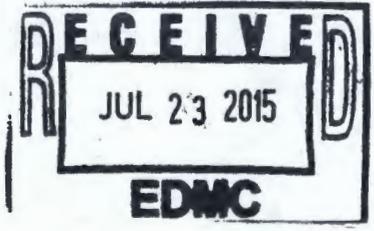

2. **Prepared and Reviewed By:**

3. **Comment:**

The area of debris was identified during a 1997 RCRA Permit General Inspection tour and give a WIDS sitecode. The debris consists of concrete rubble, wood, cans, metal pipes and rusted sheet metal. A radiological survey of the area had been done in 1991. No contamination above background was detected.

This form recommends changing the Unit Category from CERCLA to Miscellaneous Restoration. The site history will remain in the WIDS database and Qmap, but will be removed from Appendix C of the TPA.

4. **Is the site a Solid Waste Management Unit?**  Yes  
 No

Any discernible location at the Facility where solid wastes have been placed at any time, irrespective of whether the location was intended for the management of solid or dangerous waste, and includes any area at the Facility at which solid wastes have been routinely and systematically released (for example through spills), and includes dangerous waste treatment, storage, and disposal units.

5. **Does the site need to be addressed under a regulatory program? Check first item that applies.**
