Description of Current Waste Site Conditions:

(Summarize status of investigation/remediation of the waste sites.)

The powerhouse was shut down in December 1997. Only a thin layer of coal, coal dust, and small piles of coal remain at the site. No known hazardous materials remain at the site.

Basis for Reclassification:

(For closeout, reference supporting documentation, as listed in Table 3.)

A waste determination for Anthracite (Anthraflit) was performed in 1994. A waste determination for bituminous coal dust was performed in 1996. The waste streams for both types of coal were determined to be nondangerous.

This site was originally reclassified to "No Action" on 5/11/2004. It is requested that the reclassification status be re-evaluated to a status of "Rejected". The Rejected status will preclude carrying the site forward through the CERCLA process.
