

**Change Notice for Modifying Approved Documents/ Workplans  
In Accordance with the Tri-Party Agreement Action Plan,  
Section 9.0, Documentation and Records**

<b>Change Number</b>	<b>Document Submitted Under Tri-Party Agreement Milestone</b>	<b>Date:</b>		
TPA-CN-369	NA	July 6, 2010		
<b>Document Number and Title:</b> DOE/RL 2008-11, Rev. 0. "Remedial Investigation Work Plan for Hanford Site Releases to the Columbia River"		<b>Date Document Last Issued:</b> September, 2008		
<b>Originator:</b> John Sands		<b>Phone:</b> 372-2282		
<b>Description of Change: Change the minimum length requirement for walleye to be included in composite samples from greater than 15 inches to greater than 11 inches.</b>				
Appendix A, Section 2.4.4.2, paragraph 1 (p. A2-22) of the Work Plan (DOE/RL 2008-11) references Table 2-9 for the list of target fish and target fish size. The size for walleye in Table 2-9 is listed as greater than 18 inches. However, Washington State fishing regulations specify no minimum size requirement for walleye in the areas of the Columbia River covered in the Work Plan. In September, 2009 this minimum size was reduced to 15 inches, as documented in TPA Change Number TPA-CN-294. This change will further reduce the minimum size for walleye to 11 inches.				
				
<b>Justification and Impacts of Change:</b>				
<p><b>EDMC</b></p> <p>Walleye populations in the Lake Wallula study area appear to be relatively smaller than the populations of the other non-sturgeon game fish covered in the Work Plan (whitefish, carp, suckers, and bass). Walleye fishing for this study is being done using a hook and line method, which is time intensive. Given that these fish are being captured to support a human-health risk assessment, and the population of fish in the study area is more limited than other game fish, it is reasonable to include fish for the study that are of smaller size but within the legal limit.</p> <p>Washington State game fishing regulations for the Columbia River for the fishing areas covered in the Work Plan specify that there is no minimum size for walleye. Of the daily limit of 10 fish, only 5 greater than 18 inches and 1 greater than 22 inches can be retained. Therefore, lowering the minimum size limit for walleye to 11 inches will still be within the size range allowed for capture per state regulations in the study areas. The intent is to continue to collect larger individuals but provide the flexibility to retain some of the smaller fish for the study within the current time frame available and minimize impacts to the schedule for completion of the subsequent risk assessments.</p>
