

Subject: Transfer of Excess Sturgeon Material

This sheet documents the transfer of excess Sturgeon material collected in support of the Remedial Investigation Work Plan for Hanford Releases to the Columbia River (DOE/RL-2008-11) to the CTUIR. Washington Closure Hanford, LLC is releasing the excess material in accordance with agreements made between the DOE-RL and CTUIR. After processing the sturgeon for sample analysis the remaining material was stored in a locked facility at a temperature of approximately 1° Fahrenheit. The stomach sediments were stored at ambient room temperature. Materials to be transferred include the following items:

- 379 lb. of fillet and carcass
- 9 lb. of otoliths (includes jar weights)
- 3 lb. of stomach sediment (includes jar weights)
- 4 lb. of blood (includes vial weights)

2/1/11

The above materials were relinquished to CTUIR on ~~January~~ ^{FEB.} 2/1/11 09:35
