3. Comment:

The waste site is a radiologically posted concrete slab that remained following the demolition of the 217B building. In 2017, the above grade structures were completely removed down to grade. The slab was left in place. All penetrations in the slab were grouted and plugged and a minimum 6 inch gravel (5/8 minus) cap was placed over the slab and contoured. The gravel area was posted as an Underground Radioactive Material Area.

4. Is the site a Solid Waste Management Unit?

Any discernible location at the Facility where solid wastes have been placed at any time, irrespective of whether the location was intended for the management of solid or dangerous waste, and includes any area at the Facility at which solid wastes have been routinely and systematically released (for example through spills), and includes dangerous waste treatment, storage, and disposal units.

Yes
 No

5. Does the site need to be addressed under a regulatory program? Check first item that applies.
