3. Comment:

During a repair of a valve on a PUREX facility line, material from inside the line appeared to have reached the ground. The line contained dilute nitric acid. A pH sample of the soil below the valve was 1.6. The valve was bagged and the leak was repaired.

A Spill Report recommended the area be documented in the WIDS database to be addressed at a future date.

4. Is the site a Solid Waste Management Unit?

Any discernible location at the Facility where solid wastes have been placed at any time, irrespective of whether the location was intended for the management of solid or dangerous waste, and includes any area at the Facility at which solid wastes have been routinely and systematically released (for example through spills), and includes dangerous waste treatment, storage, and disposal units.

 Yes No

5. Does the site need to be addressed under a regulatory program? Check first item that applies.
