3. Comment:

The 200-E-331-PL waste site is a pipeline 2 inch diameter, stainless steel pipe that ran between the 241-C-154 Diversion Box to the C Cell of the 201C (Hot Semi Works building). The pipeline extended from the east side of the diversion box to the east side of 201C. The promethium-rich solution was transferred from B-PlanT (221-B) to the Hot-Semiworks via the 200-E-226-PL (A,B,C) pipeline and routed into the V839 line in the 241-C-154 Diversion Box.

4. Is the site a Solid Waste Management Unit?

Yes No

Any discernible location at the Facility where solid wastes have been placed at any time, irrespective of whether the location was intended for the management of solid or dangerous waste, and includes any area at the Facility at which solid wastes have been routinely and systematically released (*for example through spills*), and includes dangerous waste treatment, storage, and disposal units.

5. Does the site need to be addressed under a regulatory program? Check the first item that applies.
