Waste Site Reclassification Form

<b>Date Submitted:</b> 8/3/1998	<b>Operable Unit(s):</b> 300-FF-2	<b>Control Number:</b> 98-044
<b>Originator:</b> C. E. Corriveau, Jr., MSIN H0-17	<b>Waste Site ID:</b> 300-96	
<b>Phone:</b> 372-9565	<b>Type of Reclassification Action:</b> Rejected <input checked="" type="radio"/> Closed-Out <input type="radio"/> No Action <input type="radio"/>	

This form documents agreement among the parties listed below authorizing classification of the subject unit as rejected, closed-out, or no action and authorizing backfill of the site, if appropriate. Final removal from the NPL of no action or closed-out sites will occur at a future date.

**Description of current waste site condition:**

The site is a 132.1 centimeter (52 inch) diameter French drain constructed of concrete and covered with a steel lid. A 3.8 centimeter (1.5 inch) diameter pipe extends from the west wall of the 325 building to the French drain. The site is listed in the "Inventory of Miscellaneous Streams, Revision 3, as stream #707.

**Basis for reclassification:**

The "Inventory of Miscellaneous Streams", Revision 3, lists the site as inactive, source abandoned. This site received less than 0.038 liters (0.01 gallons) per minute steam condensate only. Steam was produced from sanitary water that had been sent through a water softener system to remove minerals (calcium and magnesium). The treated water was introduced into boilers to produce steam. This steam was superheated before distribution to facilities for heating and process use. Disposal sites received steam condensate from the steam distribution lines. When used for heating purposes, this was a seasonal discharge. Non-regulated chemicals were added to dechlorinate the water, prevent scale, and control corrosion.
