Dear J.A. Lerch

Thank you for purchasing analytical testing services from IT Corporation. It is our intention to supply our clients with data packages which not only meet the industry's highest standards for quality, but are also easy to use. Features which we point out are:

1. A Data Summary Packet which allows you to review your data without searching through the complete data package.

Your Data Summary Packet contains the following items:

- Case Narrative: listing of sample identifications, analyses performed, explanation of any problem associated with samples, corrective action taken.
- Quality control sample identifications and analyses performed.
- Data summary.

2. A data package which meets the specific requirements you requested and is easy to use as well. The package is organized in accordance with the Table of Contents which you will find at the beginning of each section. Sections are separated by color-coded tabs, making it easy to find individual analytical parameters which may be of particular interest to you. The data package is custody-sealed at the laboratory - your assurance that parts of the package are not missing.

We are constantly searching for ways to improve our service to you. This current product has many of the features which you have told us are important to you. Your suggestions regarding additional improvements will be appreciated.

### III. Quality Control

The volatiles analyses were performed by purge and trap with a J & W DB-624 capillary column on a Finnigan INCOS 500 GC/MS/DS. Matrix spike and matrix spike duplicate analyses were performed using sample BOBMY0. All quality control results met method specified limits.

The semivolatiles analyses were performed by direct injection of sample extract on a Restek XTI-5 capillary column on a Finnigan INCOS XL GC/MS/DS. Matrix spike and matrix spike duplicate analyses were performed using sample BOBMY0. The recovery for 4-nitrophenol was slightly high in the matrix spike and matrix spike duplicate for sample BOBMY0.

Data were reported with qualifiers as follows:

- U - Compound analyzed for but not detected; value given is quantitation limit.
- E - Compound exceeded calibration range.
- D - Compound analyzed at a secondary dilution factor.
- J - Compound detected but below quantitation limit; value estimated.
- S - Spiked compound.
- B - Compound found in method blank.
- A - Suspected aldol condensation product.
- Y - Indistinguishable isomer in tentatively identified compounds.
- N - Presumptive evidence of compound presence.

The samples for work order #579 were digested on May 24, 1994 for ICP and GFAA. The CVAA analysis for mercury was performed on June 10, 1994; the GFAA analyses for arsenic, lead, selenium and thallium were performed from June 8 through June 10, 1994; the remaining metals were analyzed by ICP on June 22, 1994. All run QC was acceptable. A duplicate/spike pair was prepared using sample BOBMY0 (total) and BOB9635 (dissolved). Spike recovery (accuracy) results were within acceptance limits for all requested parameters except for cyanide, where a blank spike was substituted for a spiked sample due to insufficient volume. Duplicate (RPD) precision) results were within acceptance limits for all requested parameters.

The samples for work order #583 were digested on May 26, 1994 for ICP and GFAA. The CVAA analysis for mercury was performed on June 10, 1994; the GFAA analyses for arsenic, lead, selenium and thallium were performed from June 8 through June 10, 1994; the remaining metals were analyzed by ICP on June 23, 1994. All run QC was acceptable. The samples were batched with QC from work order #579.

The samples for work order #602 were digested on June 7, 1994 for ICP and GFAA. The CVAA analysis for mercury was performed on June 10, 1994; the GFAA analyses for arsenic, lead, selenium and thallium were performed from June 8 through June 10, 1994; the remaining metals were analyzed by ICP on June 23, 1994. All run QC was acceptable. The samples were batched with QC from work order #579.

III. Quality Control

The analytical results for each analysis performed under SDG W0068 include a minimum of one Laboratory Control Sample (LCS), one method (reagent) blank, and one duplicate. Any exceptions have been noted in the "Comments" section.

Quality control sample results are reported in the same units as sample results.

IV. Comments

Results from the initial radioactivity screening of these samples classified them as Category I.

**Alpha Spectroscopy**

Americium-241 by method ITAS-RD-3302

The LCS, batch blank, sample and sample duplicate (duplicate of sample B0BMY0) results are within contractual limits.

Plutonium-238, -239/40 by method ITAS-RD-3209

The LCS, batch blank, sample and sample duplicate (duplicate of sample B0BMY0) results are within contractual limits.

Uranium-234, 235, 238 by method ITAS-RD-3234

Sample B0BMY0 was not analyzed with the other samples in SDG W0068. An error had been made during the pour-up step for the batch. Sample B0BMX2 had inadvertently been poured up in place of B0BMY0, therefore, it was necessary to analyze sample B0BMY0 by itself. The analysis of B0BMY0 proceeded as intended and the results are accepted and reported. The LCS, batch blank, sample and sample duplicate (duplicate of sample B0BMY0) results are within contractual requirements.

**Gamma Spectroscopy**

Gamma Scan by method ITAS-RD-3219

Co-57 was detected in both of the LCSs (L054481S and L054482S), however, the Co-57 is not confirmed by the key line for that isotope. The Co-57 is determined to be a falsely detected isotope from a Eu-152 energy line (122 KeV) and is not reported for the LCSs. K-40 was detected in sample B0BMW8 but the result is not reported because the value is less than 2 times the error for the isotope. K-40 and Pb-212 were detected in sample B0BMX2 but the results are not reported because the values are less than 2 times the error for the isotopes. The LCS, batch blank, sample and sample duplicate (duplicate of sample B0BMW8) results are within contractual limits.

**Gas Proportional Counting**

Gross Alpha by method ITAS-RD-3222

Sample B0BMY0 and the duplicate of B0BMY0 were recounted due to results outside of the 3 sigma control limit on the initial count. The recount is accepted and reported. The LCS, batch blank, sample and sample duplicate results are within contractual limits.

Gross Beta by method ITAS-RD-3222

The LCS, batch blank, sample and sample duplicate (duplicate of sample B0BMY0) results are within contractual limits.

Strontium-90 by method ITAS-RD-3204

The LCS, batch blank, sample and sample duplicate (duplicate of sample B0BMW8) results are within contractual requirements.

### **Liquid Scintillation Counting**

#### Carbon-14 by method ITAS-RD-3247

The LCS, batch blank, sample and sample duplicate (duplicate of sample B0BMW8) results are within contractual requirements.

#### Technetium-99 by method ITAS-IT-RS-0001

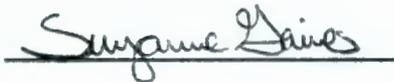

The matrix spike, LCS, batch blank, sample and sample duplicate (duplicate of sample B0BMZ8) results are within contractual requirements.

#### Tritium by method ITAS-RD-3205

SDG W0068 was batched and analyzed with SDG W0069. Quality Control Samples were prepared and analyzed for each SDG. The LCS (L054481S and L054481M), batch blank (L054481X), sample and sample duplicate (duplicate of sample B0BMW8) results are within contractual requirements.

## DATA QUALITY OBJECTIVES

The data quality objectives for 100-FR-3 Groundwater Operable Unit are specified in the *Remedial Investigation/Feasibility Study Work Plan for the 100-FR-3 Operable Unit*, (DOE/RL-91-53, Rev 0). The primary objective of the data validation effort was to ensure these data quality objectives were met, and that the data are usable and defensible. This was accomplished through a detailed examination of the data package to recreate the analytical process and verify that proper and acceptable analytical techniques had been applied. The data package was checked for correct submission of required deliverables, correct transcription of raw data to the summary forms, and for proper calculation of a number of parameters.

- Precision.** Goals for precision were met with the exception of U-234, 235, and 238. For more information see the "DATA QUALIFICATION SUMMARY TABLE".
- Accuracy:** Goals for accuracy were met with the exception of selenium, thallium, U-235, 2,4-dinitrophenol, 2-nitrophenol and 4-nitrophenol. For more information see the "DATA QUALIFICATION SUMMARY TABLE".
- Sample Result Verification:** All sample results were supported in the raw.
- Detection Limits:** Detection limits goals were met with the exception of TOX. For more information see "COMMENTS".
- Completeness:** The data package was 99% complete for the requested analyses.

- The sample BOBMY0 was a field duplicate of BOBMP4. The precision comparisons will be made in the summary report for the 100-FR-3 project.
- The samples BOBMZ2 and BOBMZ8 were identified as equipment blanks.
- The samples BOBMW8, BOBMY0, BOBMP0, BOBMX2 and BOBMZ2 were received without proper preservative for the cyanide analysis. This could lead to low biased sample results.

General Chemistry

- Results for the COD analyses were submitted from IT-Knoxville and IT-St. Louis. The IT-Knoxville data was used for validation because it met the hold time requirement.
- The CRDL for total organic halogens was 5µg/L; however, the laboratory used 20µg/L.
- The sample BOBMY0 was a field duplicate of BOBMP4. The precision comparisons will be made in the summary report for the 100-FR-3 project.
- The samples BOBMW8, BOBMP0 and BOBMZ2 were received without proper preservative for the sulfide, TOC and nitrate/nitrite analyses. This could lead to low biased sample results.

Radiochemistry

- The reanalysis results for uranium (isotopic) of sample BOBMY0 were added to the Form 1 by the validator. This avoids putting the package "on hold". The reanalysis data was included in the data package. The original analysis of BOBMY0, which was reported on the Form 1s, are qualified unusable (R/UR).

COMMENTS (cont.)

Radiochemistry

- Samples BOBMZ2 and BOBMZ8 were identified as equipment blanks. Both samples had no activity detected for all analyses.
- The sample BOBMY0 was a field duplicate of BOBMP4. The precision comparisons will be made in the summary report for the 100-FR-3 project.
- The expected value for the uranium-235 LCS was not entered correctly. The correct LCS expected and the % recovery was listed on the LCS Form 1 by the validator.

**DATA VALIDATION APPLIED QUALIFIERS**

Qualifiers which may be applied by data validators in compliance with the procedures herein are as follows.

- U- Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.
- UJ- Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a QC deficiency identified during data validation, the associated quantitation limit is an estimate.
- J- Indicates the compound or analyte was analyzed for and detected. The associated concentration is an estimate, but the data are usable for decision making purposes.
- BJ- Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.
- R- Indicates the compound or analyte was analyzed for, detected, and due to an identified QC deficiency the data are unusable.
- UR- Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data are unusable due to an identified QC deficiency.
- JN- Indicates a tentatively identified compound (TIC) that has been determined to be valid in terms of identification and quantitation.
- UJN- Indicates a tentatively identified compound (TIC) that has been determined to be presumptive and valid (JN) in terms of identification and quantitation and has been qualified as undetected (U) due to associated blank contamination.
- NJ- Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific application (i.e., usable for decision making purposes).
- N- Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision making purposes).

**LABORATORY APPLIED QUALIFIERS**

Qualifiers which may be applied by the laboratory in compliance with applicable requirements are as follows.

**Organic Data Qualifiers**

- U- Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.
- J- Indicates an estimated value. This flag is used when estimating concentrations of tentatively identified compounds (TICs) or when the presence of a TCL compound is confirmed at a concentration of less than the CRQL but greater than the IDL.
- N- Indicates presumptive evidence of a compound. This flag is used only by the laboratory for TIC results when the identification is based on a mass spectral library search.
- P- This flag is used for pesticide/Aroclor target analytes when there is greater than 25% difference for detected values between the quantitation and confirmation GC columns. The lower of the two concentrations is reported on the report form and the result is flagged with a "P".
- C- This flag applies to pesticide results where the identification has been confirmed by GC/MS. This flag should not be used by the laboratory if GC/MS confirmation was attempted but unsuccessful, in which case, the laboratory should use an "X" flag as defined below. The "X" flag is then defined in the SDG narrative.
- B- This flag applies to results in which the analyte was detected in both the sample and the associated blank. The combination of the "B" flag with the "U" flag ("BU" or "UB") is expressly prohibited in the analytical SOW.
- E- This flag identifies compounds whose concentrations exceed the calibrated range of the GC/MS instrument.
- D- This flag identifies compounds identified in an analysis at a secondary dilution factor.
- A- Indicates a TIC which is a suspected aldol-condensate product.
- X- This is a non-specific flag used to properly define the results. If used, this flag must be properly defined within the body of the SDG.

**LABORATORY APPLIED QUALIFIERS**

## Inorganic Qualifiers

- U- Indicates the analyte was analyzed for but not detected in the sample.
- B- Indicates the analyte concentration is less than the CRDL but greater than the IDL.
- E- Indicates the value reported is estimated due to the presence of interference.
- M- Indicates duplicate injection precision criteria were not met during graphite furnace (GFAA) analysis.
- N- Indicates spiked sample recovery was not within the control limits.
- S- Indicates the reported value was determined by the Method of Standard Additions (MSA).
- W- Indicates post-digestion spike for GFAA analysis is outside control limits and the sample absorbance is less than 50% of the spike absorbance.
- \*- Indicates duplicate analysis was not within control limits.
- + - Indicates the correlation coefficient (r) for the MSA was less than 0.995.

★

Percent Breakdown

$$\%breakdown = \frac{TDA}{TPA} \times 100$$

where:

(TDA) total degradation peak area = the total peak areas of DDE + DDD or endrin aldehyde + endrin ketone

(TPA) total peak area = the total of all associated peak areas for DDE, DDE + DDT or endrin aldehyde, endrin ketone + endrin

### DATA VALIDATION SUMMARY

#### MAJOR DEFICIENCIES:

1. None.

#### MINOR DEFICIENCIES:

1. Tc99 was detected in the method blank. BOBMW8 was qualified as undetected (U).
2. The U-235 LCS recovery (first analysis) was < 75% (QAPjP). The U235 results for all samples except BOBMY0 are qualified as estimated (J/UJ).
3. An acceptable duplicate for the U-iso analysis (the original and the reanalysis run) was not performed. The U-iso results for all samples are qualified estimated (J/UJ).

#### COMMENTS:

1. The reanalysis results for U-iso of BOBMY0 are added to the Form 1 by the validator. This avoids putting the package "on hold". The reanalysis data was included in the data package. The original analysis of BOBMY0 was rejected due to a pour up error during sample preparation.
3. BOBMZ2 and BOBMZ8 are field equipment blanks. Both samples had no activity detected for all analyses.
4. BOBMY0 is listed as a field duplicate, but a field duplicate of which sample? A RPD evaluation is not possible.
5. The expected value for the U235 LCS was not entered correctly. The correct LCS expected and the % recovery is listed on the LCS Form 1.

Alpha RPD acceptable, Pu 239 <sup>accepted on</sup> ~~scripted~~  
 U234, U238 — No accepted due to sample prep mix up.

The reported U-iso values for BOBMYO <sup>are</sup> not accepted. The lab admits to sample prep error and re-analyzed BOBMYO. For some reason, the reanalysis results were not reported. When BOBMYO was re-analyzed, a duplicate was not re-analyzed. Therefore a duplicate was not done with the batch made and all samples will be estimated (J/UJ). The results for the re-analysis of BOBMYO will be added to the Form 1. The LLS for the re-analysis is acceptable. The blank is ~~not~~ acceptable. The results will be est. (UJ/J) for each duplicate.

The re-analys. results cannot be compared to the "orig" from the 1st analysis because the <sup>prep</sup> samples were not prep'd at the same time.

### III. Quality Control

The volatiles analyses were performed by purge and trap with a J & W DB-624 capillary column on a Finnigan INCOS 500 GC/MS/DS. Matrix spike and matrix spike duplicate analyses were performed using sample BOBMY0. All quality control results met method specified limits.

The semivolatiles analyses were performed by direct injection of sample extract on a Restek XTI-5 capillary column on a Finnigan INCOS XL GC/MS/DS. Matrix spike and matrix spike duplicate analyses were performed using sample BOBMY0. The recovery for 4-nitrophenol was slightly high in the matrix spike and matrix spike duplicate for sample BOBMY0.

Data were reported with qualifiers as follows:

- U - Compound analyzed for but not detected; value given is quantitation limit.
- E - Compound exceeded calibration range.
- D - Compound analyzed at a secondary dilution factor.
- J - Compound detected but below quantitation limit; value estimated.
- S - Spiked compound.
- B - Compound found in method blank.
- A - Suspected aldol condensation product.
- Y - Indistinguishable isomer in tentatively identified compounds.
- N - Presumptive evidence of compound presence.

The samples for work order #579 were digested on May 24, 1994 for ICP and GFAA. The CVAA analysis for mercury was performed on June 10, 1994; the GFAA analyses for arsenic, lead, selenium and thallium were performed from June 8 through June 10, 1994; the remaining metals were analyzed by ICP on June 22, 1994. All run QC was acceptable. A duplicate/spike pair was prepared using sample BOBMY0 (total) and BOB9635 (dissolved). Spike recovery (accuracy) results were within acceptance limits for all requested parameters except for cyanide, where a blank spike was substituted for a spiked sample due to insufficient volume. Duplicate (RPD) precision) results were within acceptance limits for all requested parameters.

The samples for work order #583 were digested on May 26, 1994 for ICP and GFAA. The CVAA analysis for mercury was performed on June 10, 1994; the GFAA analyses for arsenic, lead, selenium and thallium were performed from June 8 through June 10, 1994; the remaining metals were analyzed by ICP on June 23, 1994. All run QC was acceptable. The samples were batched with QC from work order #579.

The samples for work order #602 were digested on June 7, 1994 for ICP and GFAA. The CVAA analysis for mercury was performed on June 10, 1994; the GFAA analyses for arsenic, lead, selenium and thallium were performed from June 8 through June 10, 1994; the remaining metals were analyzed by ICP on June 23, 1994. All run QC was acceptable. The samples were batched with QC from work order #579.

### I. Introduction

On May 20, 24, and 26, 1994, six water samples were received by ITAS-Richland for radiochemical analysis. Upon receipt, the samples were assigned the following laboratory ID numbers to correspond with the WHC specific IDs:

<u>ITAS-Richland ID</u>	<u>WHC ID</u>	<u>Matrix</u>	<u>Date of Receipt</u>
405448-01A	BOBMW8	Water	5/20/94

405573-01A	BOBMZ8	Water	5/27/94

### II. Analytical Results/Methodology

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information, analytical results and the appropriate associated statistical errors.

Americium-241 by method ITAS-RD-3302

Plutonium-238, -239/40 by method ITAS-RD-3209

Uranium-234, 235, 238 by method ITAS-RD-3234

**Gamma Spectroscopy**

Gamma Scan by method ITAS-RD-3219

**Gas Proportional Counting**

Gross Alpha by method ITAS-RD-3222

Gross Beta by method ITAS-RD-3222

Strontium-90 by method ITAS-RD-3204

**Liquid Scintillation Counting**

Carbon-14 by method ITAS-RD-3247

Technetium-99 by method ITAS-IT-RS-0001

Tritium by method ITAS-RD-3205

III. Quality Control

The analytical results for each analysis performed under SDG W0068 include a minimum of one Laboratory Control Sample (LCS), one method (reagent) blank, and one duplicate. Any exceptions have been noted in the "Comments" section.

Quality control sample results are reported in the same units as sample results.

IV. Comments

Results from the initial radioactivity screening of these samples classified them as Category I.

**Alpha Spectroscopy**

Americium-241 by method ITAS-RD-3302

The LCS, batch blank, sample and sample duplicate (duplicate of sample B0BMY0) results are within contractual limits.

Plutonium-238, -239/40 by method ITAS-RD-3209

The LCS, batch blank, sample and sample duplicate (duplicate of sample B0BMY0) results are within contractual limits.

Westinghouse Hanford Company

Page 3

---

Uranium-234, 235, 238 by method ITAS-RD-3234

Sample BOBMY0 was not analyzed with the other samples in SDG W0068. An error had been made during the pour-up step for the batch. Sample BOBMX2 had inadvertently been poured up in place of BOBMY0, therefore, it was necessary to analyze sample BOBMY0 by itself. The analysis of BOBMY0 proceeded as intended and the results are accepted and reported. The LCS, batch blank, sample and sample duplicate (duplicate of sample BOBMY0) results are within contractual requirements.

**Gamma Spectroscopy**

Gamma Scan by method ITAS-RD-3219

Co-57 was detected in both of the LCSs (L054481S and L054482S), however, the Co-57 is not confirmed by the key line for that isotope. The Co-57 is determined to be a falsely detected isotope from a Eu-152 energy line (122 KeV) and is not reported for the LCSs. K-40 was detected in sample BOBMW8 but the result is not reported because the value is less than 2 times the error for the isotope. K-40 and Pb-212 were detected in sample BOBMX2 but the results are not reported because the values are less than 2 times the error for the isotopes. The LCS, batch blank, sample and sample duplicate (duplicate of sample BOBMW8) results are within contractual limits.

**Gas Proportional Counting**

Gross Alpha by method ITAS-RD-3222

Sample BOBMY0 and the duplicate of BOBMY0 were recounted due to results outside of the 3 sigma control limit on the initial count. The recount is accepted and reported. The LCS, batch blank, sample and sample duplicate results are within contractual limits.

Gross Beta by method ITAS-RD-3222

The LCS, batch blank, sample and sample duplicate (duplicate of sample BOBMY0) results are within contractual limits.

Strontium-90 by method ITAS-RD-3204

The LCS, batch blank, sample and sample duplicate (duplicate of sample BOBMW8) results are within contractual requirements.

**Liquid Scintillation Counting**

Carbon-14 by method ITAS-RD-3247

The LCS, batch blank, sample and sample duplicate (duplicate of sample B0BMW8) results are within contractual requirements.

Technetium-99 by method ITAS-IT-RS-0001

The matrix spike, LCS, batch blank, sample and sample duplicate (duplicate of sample B0BMZ8) results are within contractual requirements.

Tritium by method ITAS-RD-3205

SDG W0068 was batched and analyzed with SDG W0069. Quality Control Samples were prepared and analyzed for each SDG. The LCS (L054481S and L054481M), batch blank (L054481X), sample and sample duplicate (duplicate of sample B0BMW8) results are within contractual requirements.

I certify that this Certificate of Analysis is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above.
