RME	reasonable maximum exposure
RSD	relative standard deviation
SD	standard deviation
SVOC	semi-volatile organic compound
TPH	total petroleum hydrocarbon
UCL	upper confidence limit
VOC	volatile organic compound
WMA	Waste Management Area

1 Purpose

The purposes of this environmental calculation are listed below:

- Documents the data processing and reduction steps taken to prepare the 200-BP-5 Groundwater operable unit (OU) and 200-PO-1 Groundwater OU data sets that will be used for calculation of upper confidence limits of the arithmetic mean (UCLs) for analytes detected in the 200-BP-5 and 200-PO-1 Groundwater OUs.
- Describes the statistical methodology used to calculate values for the 95% UCL.
- Presents the logic for computing exposure point concentrations (EPCs) for each exposure area within the 200-BP-5 and 200-PO-1 Groundwater OUs.

This environmental calculation supports the remedial investigation/feasibility study (RI/FS) process being conducted for the 200-BP-5 and 200-PO-1 Groundwater OUs under the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA). The process is currently at the remedial investigation (RI) stage of completion (DOE/RL-2009-127, *Remedial Investigation Report for the 200-BP-5 Groundwater Operable Unit*; DOE/RL2009-85, *Remedial Investigation Report for the 200-PO-1 Groundwater Operable Unit, Addendum*).

2 Background

This environmental calculation addresses a key element of the risk assessment process for hazardous waste sites: estimation of the concentration of a chemical in the environment. An exposure point concentration (EPC) is a conservative estimate of the contaminant concentration at an exposure point or in an exposure area where an exposed receptor may reasonably be assumed to move at random and where contact with an environmental medium (e.g., water) is equally likely at all locations within the exposure area. The rationale for use of exposure concentrations is explained in EPA/540/1-89/002, *Risk Assessment Guidance for Superfund Volume I Human Health Evaluation Manual (Part A)*:

“Although this concentration does not reflect the maximum concentration that could be contacted at any one time, it is regarded as a reasonable estimate of the concentration likely to be contacted over time. This is because in most situations, assuming long-term contact with the maximum concentration is not reasonable.”

OSWER 9285.6-10, *Calculating Upper Confidence Limits for Exposure Point Concentrations at Hazardous Waste Sites*, states that “an exposure point concentration (EPC) is a conservative estimate of the average chemical concentration in an environmental medium.” OSWER Publication 9285.7-081, *Supplemental Guidance to RAGS: Calculating the Concentration Term*, states that, “because of the uncertainty associated with estimating the true average concentration at a site, the 95 percent upper confidence limit (UCL) of the arithmetic mean should be used for this variable.” (OSWER 9285.6-10 is the update to OSWER Publication 9285.7-081.) Use of the 95% UCL yields risk estimates that correspond to a reasonable maximum exposure (RME). In this environmental calculation, instances where a value different from a UCL is used as the EPC are clearly identified and the reasons and/or justifications for the departure are provided.

OSWER 9285.6-10 also states that “The EPC is determined for each individual exposure unit within a site. An exposure unit is the area throughout which a receptor moves and encounters an environmental medium for the duration of the exposure. Unless there is site-specific evidence to the contrary, an individual receptor is assumed to be equally exposed to media within all portions of the exposure unit

over the time frame of the risk assessment.” For this environmental calculation, the terms “exposure unit” and “exposure area” are considered operationally equivalent.

3 Methodology

The methodology used for this environmental calculation involves evaluating exposure area-specific and well-specific analytical data sets for each groundwater OU. Twelve separate exposure areas have been identified in the 200-BP-5 Groundwater OU. All but one of these exposure areas contains wells screened in the unconfined aquifer. The 12 200-BP-5 Groundwater OU exposure areas are as follows:

- Low-Level Waste Management Area-1 (LLWMA1) (218-E-10 Landfill)
- LLWMA2 and the 216-B-63 Trench
- Waste Management Area (WMA) B-BX-BY Tank Farms
- WMA C Tank Farm
- B Plant
- Semiworks
- Liquid Effluent Retention Basin (LERF)
- Gable Mountain Pond
- 200-BP-5 West
- 200-BP-5 Far Field (North of Gable Gap)
- 200-BP-5 Near River
- 200-BP-5 Confined - The only exposure area screened in the confined aquifer.

Seven separate exposure areas have been identified in the 200-PO-1 Groundwater OU. All seven exposure areas contain wells screened in the unconfined aquifer. The seven 200-PO-1 Groundwater OU exposure areas are as follows:

- PUREX Cribs
- WMA A-AX Tank Farms and the 216-A-29 Ditch
- BC Cribs and Trenches
- 216-B-3 Pond Facility (Three lobes)
- Nonradioactive Dangerous Waste Landfill/Solid Waste Landfill (NRDWL/SWL)
- 200-PO-1 Far Field
- 200-PO-1 Near River

The individual exposure areas and associated wells are listed in Table 3-1 and Table 3-2 for the 200-BP-5 and 200-PO-1 Groundwater OUs, respectively. In addition to calculating EPCs by exposure area, this evaluation calculates well-specific EPCs for a subset of monitoring wells in each exposure area. Wells chosen for well-specific EPC calculation are identified with asterisks in Table 3-1 and Table 3-2 and include a total of 60 wells in the 200-BP-5 Groundwater OU and 58 wells in the 200-PO-1 Groundwater OU. The well-specific EPC calculations were performed in two separate processing runs; documentation and presentation of the well-specific information is presented separately to maintain consistency with the associated files.

The following provides an overview of the methodology used to process and reduce the data sets, the tools used to calculate the 95% UCL for each detected analyte, and the logic used to compute the EPC value for each analyte in an exposure area or individual well for each groundwater OU:

1. Obtain 6-year data sets containing validated sampling results for both groundwater OUs.
2. Identify the unique sample numbers associated with the exposure areas in each groundwater OU.
3. Process and reduce the data sets to obtain a single set of results per sampling location and time of collection.
4. Process the data sets to remove results for analytes meeting exclusion criteria.
5. Process the data sets for each groundwater OU to remove analytes that have not been detected in any of the samples from that groundwater OU.
6. Process the data sets for each exposure area through ProUCL 4.00.05 and obtain the UCL and raw statistics output files.
7. Summarize the ProUCL 4.00.05 statistical results for detected analytes in each exposure area and each individual well.
8. Compute the EPC for each detected analyte in each exposure area and each individual well.

The following subsections provide descriptions of each step in the methodology.

3.1 Analytical Data Processing and Reduction

The verified and validated analytical data used for this evaluation includes the following types of information:

- Analytical results from both unfiltered and filtered samples.
- Data qualification and data validation flags, including rejected results.
- Results for a given analyte reported by more than one analytical method.
- Parent and field duplicate results.

The analytical data are processed and reduced to eliminate unusable data and obtain one set of results per sampling location and date of sample collection. The data processing and reduction steps, and the number of records associated with each of the steps, are presented in Figures 3-1 and 3-2 for the 200-BP-5 and 200-PO-1 Groundwater OUs, respectively. Descriptions of the data processing and reduction steps follow.

3.1.1 Sample Results

Both filtered (dissolved) and unfiltered (total) analytical results are available for some analytes reported in the groundwater data sets. Typically, there are more filtered than unfiltered sample results available for metals. Because use of filtered sample results might lead to underestimation of analyte concentrations (e.g., in water from an unfiltered tap), groundwater risk assessments are generally performed using only unfiltered sample results. EPA/540/1-89/002 addresses this issue in providing guidance on estimating EPCs in groundwater:

“While filtration of ground-water samples provides useful information for understanding chemical transport within an aquifer, the use of filtered samples for estimating exposure is very controversial, because these data may underestimate chemical concentrations in water from an unfiltered tap. Therefore, data from unfiltered samples should be used to estimate exposure concentrations.”

To support the range of evaluations included in the RI reports (DOE/RL-2009-127 and DOE/RL2009-85), the full data sets including both filtered and unfiltered sample results are processed through the steps shown in Figures 3-1 and 3-2. The full data sets are also used for the subsequent analyte UCL calculations

and EPC computations; however, the EPCs identified and presented in Section 7 for use in risk characterization are based only on unfiltered sample data unless a compelling reason exists to do otherwise. Instances where an EPC identified for use in risk characterization is based on filtered sample data are clearly identified in Section 7 and the rationale for the use of filtered data is discussed.

3.1.2 Laboratory and Data Validation Flags

Analytical data are received from the laboratory with data qualification flags. Validation qualifiers are assigned during the data validation process. The following rules are applied to determine how the sample results can be used for calculating EPCs:

- Sample results flagged with a “U” data qualifier or combination of qualifiers that include a “U,” such as a “UJ,” are considered a non-detected results.
- Sample results without a “U” data qualifier are considered detected concentrations, including results without qualifiers or with other qualifiers such as “J.”
- Sample results that are rejected and flagged with an “R” validation qualifier are not used.

where:

<i>U</i>	=	Analyzed for but not detected above limiting criteria.
<i>J</i>	=	Estimated value.
<i>R</i>	=	Do not use. Further review indicates the result is not valid.

3.1.3 Analytes Reported by Numerous Analytical Methods

Often analytes are reported by more than one analytical method; therefore, multiple results for an analyte at the same location and sample date are possible. Because multiple sets of analytical results cannot be used to quantify risk (that is, this would result in multiple counting of a chemical), the set of data that best represents the actual concentration is retained. The results are processed to select the method that provides the most reliable results. Considerations for determining data to be retained include method-associated sample size, detection frequency, method sensitivity, and detection limits. The most conservative (that is, health-protective) use of these types of data is the goal. Larger sample size, higher detection frequencies, and lower detection limits are given higher priority for method selection.

For example, lead may be analyzed using EPA Method 200.8 (EPA-600/R-94/111, *Methods for the Determination of Metals in Environmental Samples, Supplement I*) with an estimated quantitation limit (EQL) of 2 µg/L or EPA Method 6010 in SW-846, *Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods*, with an EQL of 50 µg/L. For a sample with lead concentrations reported using both methods, the results reported by EPA Method 200.8 are selected over EPA Method 6010 (SW-846) because of the more sensitive detection limit.

3.1.4 Field Duplicate Results

Field quality control (QC) samples (field duplicates) are collected in the field and analyzed by the laboratory as unique samples. The parent sample and QC samples are collected from the same location (i.e., monitoring well) on the same date, resulting in more than one sample per location/date. Because multiple sets of analytical results cannot be used to quantify risk (i.e., this would result in multiple-counting of a chemical), the results for the same location and date are reduced to a single result for each reported analyte. The most conservative (i.e., health-protective) result is the goal. The following criteria are used to reduce multiple sample results for an individual location/date to a single result:

- If two or more detections exist, the maximum concentration is used.

- If at least one detection and one or more non-detected results exist, the detected concentration is used.
- If only (two or more) non-detected results exist, the lowest detection limit is used.

3.2 Identify Analytes for 95% UCL Calculation

After extracting and processing the data sets, they are further reduced by identifying a subset of analytes that require computation of a UCL. Analytes that meet exclusion criteria or were not detected in any of the samples analyzed for an OU are not carried forward for the statistical calculations and EPC selection for that OU. The analyte identification steps and the number of records associated with each of the steps are presented in Figures 3-1 and 3-2.

3.2.1 Apply Exclusion Criteria

The first step used to identify analytes that require a UCL calculation is to apply exclusion criteria. Analytes that meet exclusion criteria are eliminated from further consideration. Analytes that do not meet the exclusion criteria are carried forward into the next step of the process. The following defines the exclusion criteria that are applied:

- Essential nutrients (minerals).
- Background radionuclides that have been identified as not directly related to Hanford operations or processes.
- Radionuclides that have half-lives of less than 3 years and that are not significant daughter products.
- Water properties (e.g., pH, turbidity).
- Analytes without known toxicity information.

3.2.2 Identify Non-Detected Analytes

The next step used to identify analytes that require a UCL calculation is to identify non-detected analytes. Analytes that have been collected from appropriate locations, have adequate detection limits, and have not been detected in any of the samples from an OU are eliminated from further consideration from that OU. Any analyte detected at least once in an OU is carried forward to the next step of the process for that OU. For example, cyanide was not detected in any of the exposure areas in the 200-PO-1 Groundwater OU and so was eliminated as an analyte for that OU. However, cyanide was detected in several of the exposure areas in the 200-BP-5 Groundwater OU and so was carried forward as an analyte for UCL calculation for that OU.

3.2.3 Identify Exposure Area-Specific Data Sets and Develop ProUCL Input Files

The analytical data for the remaining analytes in each OU are extracted from the (processed and reduced) data sets into an Excel file to create a ProUCL input file. A ProUCL input file is produced for each unique exposure area and well-specific evaluation location. This file contains a results column for each analyte and a corresponding column that denotes the detection status of the result (1 = detect and 0 = non-detect). For sample results reported as non-detected, the method detection limit (MDL) is taken as the concentration (i.e., the result) and used in calculating UCLs.

3.3 95% UCL Calculation Methodology

OSWER 9285.6-10 is the most recent EPA guidance for UCL calculation and ProUCL 4.00.05 serves as the companion software package for this guidance. ProUCL 4.00.05 contains rigorous parametric and nonparametric statistical methods (including bootstrap methods) that can be used on data sets without non-detect results and on data sets with non-detect results (results reported below detection limits). Both ProUCL and OSWER 9285.6-10 were used to calculate UCLs for the 200-BP-5 and 200-PO-1 Groundwater OUs. ProUCL 4.00.05 user guidance is provided in EPA/600/R-07/038, *ProUCL Version 4.00.05 User Guide*.

3.3.1 ProUCL 4.00.05 Batch Processing

To create ProUCL version 4.00.05 compatible input files, the data sets for each exposure area and well-specific location are written to an Excel file (as described in Section 3.2.3) in a *.xls format. The *.xls files are then imported directly into ProUCL for calculation of UCLs and summary statistics. Batch processing is implemented to facilitate this process, due to the large number of exposure area- and well-specific data sets associated with the two OUs. The batch processing steps performed for ProUCL processing and data extraction are listed below and summarized in Figure 3-3.

1. Batch processing of the *.xls files through ProUCL to generate a raw statistics output file and a UCL output file for each exposure area and well-specific location.
2. Batch processing of the raw statistics and UCL output files to extract the following information (if available) into an Excel spreadsheet (*.xlsx file):
 - Exposure area/well name.
 - Analyte name and CAS Registry number.
 - Total number of sample results, total number of detects, and total number of non-detects.
 - Minimum and maximum detection limits for each detected analyte (when available)¹.
 - Minimum and maximum detected concentrations for each analyte.
 - Coefficient of variation for each analyte.
 - The recommended UCL value, the UCL basis, and comments and/or warning statements for each analyte.

3.3.2 Selection of EPCs

For each detected analyte, the EPC is selected using the following logic:

- If a valid UCL cannot be calculated, the maximum detected concentration is selected as the EPC.
- If a valid UCL can be calculated, the highest recommended UCL value (if multiple valid UCLs were calculated) is selected.
- If a valid UCL equal to the maximum detected concentration was calculated, this value is selected as the EPC.

¹ Minimum and maximum detection limits are summarized in the ProUCL output only when a valid UCL can be calculated.

- If the selected UCL is greater than the maximum detected concentration, then:
 - If a 97.5% Chebyshev (Mean, Sd) UCL was calculated, select the 97.5% Chebyshev (Mean, Sd) UCL as the EPC if its value is less than or equal to the maximum detected concentration.
 - If the 97.5% Chebyshev (Mean, Sd) UCL was greater than the maximum detected concentration, select the maximum detected concentration as the EPC.
 - If a 97.5% Chebyshev (Mean, Sd) UCL was not calculated, select the maximum detected concentration as the EPC.

Selection of the EPC value using the above decision logic is presented in Figure 3-4.

4 Assumptions and Inputs

This section describes the source of the inputs for the UCL calculations and provides supporting information for the assumptions made regarding calculation of 95% UCLs and computation of EPCs.

4.1 Source of the Analytical Data Sets

The groundwater data sets used in this evaluation contain the analytical results from samples collected from 161 monitoring wells in the 200-BP-5 Groundwater OU and 168 monitoring wells in the 200-PO-1 Groundwater OU (Tables 3-1 and 3-2). The majority of the wells are screened in the unconfined aquifer. Note that in the 200-BP-5 Groundwater OU, well 299-E24-25 is assigned to two exposure areas (B Plant and Semiworks) and in the 200-PO-1 Groundwater OU, well 699-43-45 is assigned to two exposure areas (WMA A-AX Tank Farms and 216-A-29 Ditch; and 216-B-3 Pond Facility [all lobes]).

The data sets for both OUs contain the analytical results from groundwater samples collected over the 6-year period from January 1, 2008 through December 31, 2013. Note that several groundwater samples were collected in January 2014 and are included in this data set. Sampling and analysis activities for these data sets were performed in accordance with the requirements in the OU work plans and sampling and analysis plans (SAPs). Both the work plans and SAPs are approved by the Tri-Party agencies and have undergone a series of revisions and modifications over time. The work plan and SAPs associated with the 200-BP-5 Groundwater OU include the following:

- DOE/RL-2007-18, *Remedial Investigation/Feasibility Study Work Plan for the 200-BP-5 Groundwater Operable Unit*
- DOE/RL-2012-35, *First Determination RCRA Groundwater Quality Assessment Plan for Low-Level Burial Grounds Low-Level Waste Management Area-1*
- DOE/RL-2012-53, *Groundwater Quality Assessment Plan for the Single-Shell Tank Waste Management Area B-BX-BY*
- DOE/RL-2009-75, *Interim Status Groundwater Monitoring Plan for the LLBG WMA-1*
- DOE/RL-2009-76, *Interim Status Groundwater Monitoring Plan for the LLBG WMA-2*
- DOE/RL-2009-77, *Groundwater Quality Assessment Plan for the Single-Shell Tank Waste Management Area C*
- DOE/RL-2008-60, *Interim Status Groundwater Monitoring Plan for the 216-B-63 Trench*

- DOE/RL-2007-18, *Remedial Investigation/Feasibility Study Work Plan for the 200-BP-5 Groundwater Operable Unit*
- DOE/RL-2006-55, *Sampling and Analysis Plan for FY 2006 200-BP-5 Groundwater Operable Unit Remedial Investigation/Feasibility Study*
- DOE/RL-2001-49, *Groundwater Sampling and Analysis Plan for the 200-BP-5 Operable Unit*

The work plans and SAPs associated with the 200-PO-1 Groundwater OU include the following:

- DOE/RL-2003-04, *Sampling and Analysis Plan for the 200-PO-1 Groundwater Operable Unit*
- DOE/RL-2007-31, *Remedial Investigation/Feasibility Study Work Plan for the 200-PO-1 Groundwater Operable Unit, Appendix A, "Sampling and Analysis Plan for Remedial Investigation and Characterization of the 200-PO-1 Groundwater Operable Unit"*
- DOE/RL-2012-59, *Sampling and Analysis Plan for Groundwater Surveillance Monitoring on the Hanford Site*
- PNNL-15315, *RCRA Assessment Plan for Single-Shell Tank Waste Management Area A-AX at the Hanford Site*
- RPP-PLAN-26534, *Integrated Disposal Facility Operational Monitoring Plan to Meet DOE Order 435.1*

All sampling and analysis data for both groundwater OUs reside in the Hanford Environmental Information System (HEIS) database. To support the use of the data in the RI/FS process, the data were downloaded from the HEIS database and validated through a supplemental data quality assessment (DQA) process. Results of the supplemental DQAs are documented in SGW-56758, *Supplement to the 200-BP-5 Groundwater Operable Unit Data Quality Assessment (2008 through 2013)* and SGW-56759, *Supplement to the 200-PO-1 Groundwater Operable Unit Data Quality Assessment (2008 through 2013)*. These two documents served as the source of the analytical data used for this evaluation.

4.2 Non-Detect Results

Data sets that contain non-detect results are referred to as censored data sets. Usually, a substitution is made using an estimate of the concentration in samples that were reported as non-detect. OSWER 9285.6-10 indicates that, because of the complicated formulas used to compute UCLs, there is no general rule about which substitution rule (half the detection limit or the full detection limit for non-detect results) will yield an appropriate UCL. OSWER 9285.6-10 further indicates that the appropriate method for calculating UCLs depends on the severity of the censoring, the size of the data set, and which assumptions are reasonable regarding the distribution of the data (e.g., normal, log-normal, etc.). OSWER 9285.6-10 also warns that if the proportion of non-detects is high (>75%), or the number of samples is small ($n < 5$), no UCL calculation method will work well. In the UCL calculations presented in this environmental calculation, the (full) method detection limit is taken as the concentration of an analyte (i.e., the result) for all non-detect results.

4.3 ProUCL Input Files

As described in Section 3.2.3, a ProUCL input file is generated from the processed and reduced data sets for each groundwater OU. The analytical results in the final data sets are extracted into an Excel file for each exposure area and well-specific location in each groundwater OU. These files have been archived in

Calculation Folder A under this Environmental Calculation File (ECF) number in the Environmental Risk Management Archive (ERMA). A list of file names is provided in Table 4-1 and Table 4-2 for the 200-BP-5 Groundwater OU and Table 4-3 and Table 4-4 for the 200-PO-1 Groundwater OU. Note that these tables list pairs of input files for each exposure area and well-specific location, one containing filtered results only (designated by a filename ending in _Y) and another containing unfiltered results only (designated by a filename ending in _N).

4.4 95% Upper Confidence Limits

As mentioned previously, OSWER 9285.6-10 is the most recent EPA guidance for UCL calculation and ProUCL 4.00.05 serves as the companion software package for this guidance. ProUCL 4.00.05 contains rigorous parametric and nonparametric statistical methods (including bootstrap methods) that can be used on data sets without non-detects and on data sets with non-detect results. Both ProUCL and OSWER 9285.6-10 were used to calculate UCLs for the 200-BP-5 and 200-PO-1 Groundwater OUs.

There are two common methodologies used to calculate UCLs: 1) distributional methods and 2) distribution-free or nonparametric methods. OSWER 9285.6-10 recommends using a distributional method for computing UCLs if the data can be shown to reasonably fit a specific distribution. Distribution-free or nonparametric methods are applied if reasonable assumptions about the data distribution cannot be made. For the purposes of this evaluation, ProUCL 4.00.05 is used to determine the recommendations regarding reasonableness of fit of the data sets to various distributions.

4.4.1 Distributional Methods

Normal and lognormal are the most common data distributions for calculating UCLs. The following are brief descriptions of recommended UCL calculation methods for these distribution types, as described in OSWER 9285.6-10.

Normal Distribution. If the data are normally distributed, then the one-sided $(1-\alpha)$ UCL of the arithmetic mean should be computed using the Student's t-statistic.

Lognormal Distribution. EPA had recommended the Land method to compute the UCL of the arithmetic mean for lognormally distributed data. This method uses the H-statistic, tables for which were published by Land. Land's approach is known to be sensitive to deviations from lognormality, and to commonly yield estimated UCLs substantially larger than appropriate when distributions are not truly lognormal (i.e., if variance or skewness is large).

EPA also suggests the use of the Chebyshev inequality method to estimate UCLs which should be appropriate for a variety of distributions so long as the skewness is not very large. The one-sided version of the Chebyshev inequality is appropriate in this context. It can be applied to the sample mean to obtain a distribution-free estimate of the UCL for the population mean when the population variance or standard deviation are known. In practice, however, these values are not known and must be estimated from data.

For lognormally distributed data sets, use of the minimum-variance unbiased estimators (MVUE) for the mean and variance is suggested to obtain a UCL of the arithmetic mean. This approach may yield an estimated UCL that is more useful than that obtained from the Land method (when the underlying distribution of concentrations is lognormal). EPA points out that for highly skewed lognormal data with small sample size and large standard deviation, the Chebyshev 99% UCL may be more appropriate than the 95% UCL, because the Chebyshev 95% UCL may not provide adequate coverage of the mean. As skewness increases further, the Chebyshev method is not recommended.

4.4.2 Non-Parametric or Distribution-Free Methods

There are distribution-free approaches to computing UCLs that do not make specific assumptions about the shape of the underlying distribution of concentrations. The following are brief descriptions of recommended methods that are described in OSWER 9285.6-10.

Central Limit Theorem (Adjusted). If the sample size is sufficiently large, the Central Limit Theorem (CLT) implies that the mean will be normally distributed, no matter how complex the underlying distribution of concentrations might be. This is the case even if the underlying distribution is strongly skewed, has outliers, or is a mixture of different populations, so long as it is stationary (not changing over time), has finite variance, and the samples are collected independently and randomly. However, the theorem does not say how many samples are sufficient for normality to hold. When sample size is moderate or small, the mean generally will not be normally distributed, and this non-normality is intensified by the skewness of the underlying distribution. Chen (1995) suggested an approach that accounts for positive skewness. Singh et al. (1997) and OSWER 9285.6-10 call this approach the "adjusted CLT" method. They suggest that it is an appropriate alternative to the distribution-specific Land's method, even if the distribution is lognormal, when the standard deviation is less than one and sample size is larger than 100.

Bootstrap Resampling. Bootstrap procedures are robust, nonparametric statistical methods that can be used to construct approximate confidence limits for the population mean. In these procedures, repeated samples of size n are drawn with replacement from a given set of observations. The process is repeated a large number of times (e.g., thousands), and each time an estimate of the desired unknown parameter (e.g., the sample mean) is computed. There are different variations of the bootstrap procedure available.

Jackknife Procedure. Like bootstrap, the jackknife technique is a robust procedure based on resampling. In this procedure repeated samples are drawn from a given set of observations by omitting each observation in turn, yielding n data sets of size $n-1$. An estimate of the desired unknown parameter (e.g., sample mean) is then computed for each sample. When the standard estimators are used for the mean and standard deviation, this procedure reduces to the UCL based on the Student's t statistic. However, when other estimators (such as MVUE) are used, this jackknife procedure does not reduce to the UCL based on Student's t statistic.

Chebyshev Inequality Method. As described previously, EPA suggests the use of the Chebyshev inequality to estimate UCLs, which should be appropriate for a variety of distributions, as long as the skewness is not very large. The one-sided version of the Chebyshev inequality is appropriate in this context. It can be applied to the sample mean to obtain a distribution-free estimate of the UCL for the population mean, when the population variance or standard deviation are known. In practice, however, these values are not known and must be estimated from the data.

4.5 Minimum Data Set Size Requirements

Some decision statistics computed by ProUCL 4.00.05 require a minimum sample size. The following limitations of ProUCL apply to data sets with non-detects (i.e., censored data sets):

- A UCL is not calculated for data sets with less than five results.
- For data sets of at least five results, a UCL is not calculated when there is only one detected result in the data set.
- For data sets of at least five results, only Kaplan-Meier method-based UCLs are generated when there are only two detected results.

- For data sets of at least five results, most parametric and nonparametric (except for gamma distribution-based) UCLs are generated when there are at least three detected values.
- For data sets of at least five results, all parametric and nonparametric UCLs are generated when there are four or more detected values.

ProUCL generates warning messages for all small (sample size <8-10) data sets processed, informing the user about potential deficiencies in the data set.

4.6 Use of Maximum Detected Concentrations to Compute the EPC

As described in Section 3.3.2, the EPC defaults to the maximum detected concentration when any of the following conditions are met:

- When a 95% UCL cannot be calculated due to small sample size.
- When the 95% UCL is greater than the maximum detected concentration and the 97.5% Chebyshev (Mean, Sd) UCL either was not calculated by ProUCL or the calculated value was greater than the maximum detected concentration.

ProUCL notes that the EPC term represents the average exposure contracted by a receptor over a long exposure duration and this term should be estimated by an average value (such as the 95% UCL) and not by the maximum observed concentration. Use of maximum observed concentrations results in risk estimates that correspond to maximum possible exposures; such estimates effectively make the assumption that a drinking water supply well will be drilled at the location of the maximum detected concentration all of the time. The following provides additional information regarding when a maximum detected concentration is selected as the EPC in this evaluation.

OSWER 9285.7-081 states that for exposure units with limited amounts of data or extreme variability in measured or modeled data, the calculated UCL can be greater than the highest measured or modeled concentration. In these cases, if additional data cannot practicably be obtained, the highest measured or modeled value can be used as the concentration term. It further states that sampling data have shown that data sets with fewer than 10 samples per exposure area provide poor estimates of the mean concentration (i.e., there is a large difference between the sample mean and the UCL). As described above, ProUCL has minimum size requirements to compute decision statistics. For data sets of at least five results, a UCL is not calculated when there is only one detected result in the data set. ProUCL notes that in cases where the number of available detected samples is small (< 5), the estimation of the EPC term is decided upon on a site-specific basis. For small data sets, where a UCL cannot be calculated, the EPC defaults to the maximum detected concentration. ProUCL generates warning messages regarding the potential deficiencies associated with a small data set.

Some of the methods described in Section 4.4 can produce very high estimates of the UCL. OSWER 9285.6-10 acknowledges that the Land method can produce extremely high values for the UCL, when data exhibit high variance and the sample size is small. OSWER 9285.7-081 recognizes the problem of extremely high UCLs, and recommends defaulting to the maximum detected concentration when the calculated UCL exceeds this value. ProUCL, however, advises that an alternative UCL (i.e., Chebyshev inequality) be selected as an EPC instead of the maximum detected concentration when the recommended UCL exceeds the maximum detected concentration.

In this evaluation, when the recommended UCL exceeds the maximum detected concentration, a 97.5% Chebyshev (Mean, Sd) UCL is selected as the EPC, if it is available and its value is less than the

maximum detected concentration. If the 97.5% Chebyshev (Mean, Sd) is available but is greater than the maximum detected concentration, the maximum detected concentration is selected as the EPC for risk characterization and the use of the 97.5% Chebyshev (Mean, Sd) as an EPC will be evaluated in the risk assessment uncertainty evaluation. When the recommended UCL exceeds the maximum detected concentration and a Chebyshev (Mean, Sd) UCL is not available, the maximum detected concentration is selected as the EPC. ProUCL generates a warning message when the recommended UCL exceeds the maximum observed concentration.

5 Software Applications

Software used for this evaluation includes Microsoft Access² database software, ProUCL version 4.00.05 statistical software³, and Microsoft Excel⁴. Microsoft Access was used to query and sort the data. ProUCL was used to perform statistical calculations on the analytical data sets. Microsoft Excel was used to present the data in spreadsheets. The following information is provided for ProUCL as an approved software package.

5.1 Description

The following presents the description of ProUCL used for this Environmental Calculation. See CHPRC-01270, Rev. 0, *ProUCL Software Management Plan* for further details regarding the use of this software:

- ProUCL,
- Version 4.00.05
- HISI Identification Number: 2831
- Workstation type and property number: INTERA-00470.

5.2 Software Installation and Checkout

The software installation and checkout form for ProUCL is attached to this Environmental Calculation.

5.3 Statement of Valid Software Application

The following presents the statement that ProUCL is a valid software application.

- ProUCL was developed by EPA to provide statistical calculations in support of risk assessment activities.
- ProUCL as it has been used in this environmental calculation has been implemented within the range of its limitations. The input files used with and the output files generated by ProUCL are archived in ERMA under this ECF number.

² Access is a trademark of Microsoft Corporation, Redmond, Washington.

³ ProUCL is a statistical software package developed by the U.S. Environmental Protection Agency, distributed free of charge, and made available for download at http://www.epa.gov/nerlesd1/tsc/TSC_form.htm.

⁴ Excel is a trademark of Microsoft Corporation, Redmond, Washington.

6 Calculation

EPCs are computed using the methodology presented in Section 3 and the inputs and assumptions described in Section 4. Results for each step of the process are summarized in the text and tables presented in Section 7.

7 Results/Conclusions

This section documents the results of the data processing and EPC computation steps performed on the data sets for the 200-BP-5 and 200-PO-1 Groundwater OUs.

7.1 Identify Analytes for UCL Calculation

This section summarizes the process of selecting analytes to process through ProUCL for the UCL and raw statistics calculations. Following validation (SGW-56758), the data set for the 200-BP-5 Groundwater OU data set contained a total of 160,285 records and 379 analytes. Following the data processing and reduction steps described in Section 3.1, the data set contained 132,092 records and 358 analytes.

Following validation (SGW-56759), the 200-PO-1 Groundwater OU data set contained a total of 118,034 records and 345 analytes. Following the data processing and reduction steps described in Section 3.1, the data set contained 99,972 records and 342 analytes.

7.1.1 Apply Exclusion Criteria

Ninety-six analytes for the 200-BP-5 Groundwater OU and 88 analytes for the 200-PO-1 Groundwater OU met the exclusion criteria and were excluded from further consideration. The excluded analytes are listed in Table 7-1 and Table 7-2 for the 200-BP-5 Groundwater OU and 200-PO-1 Groundwater OUs, respectively. The tables provide sampling dates, minimum and maximum detected concentrations, minimum and maximum method detection limits, and the basis for exclusion for each analyte.

7.1.1.1 *Essential Nutrients*

Essential nutrients are those analytes considered essential for human nutrition. The essential nutrients (minerals) calcium, magnesium, potassium, and sodium were eliminated from further consideration for UCL calculation in both the 200-BP-5 and 200-PO-1 Groundwater OUs.

7.1.1.2 *Background Radionuclides*

Background radionuclides are those radionuclides considered to be naturally occurring and not directly related to Hanford operations or processes. The background radionuclides potassium-40, radium-226, radium-228, thorium-228, thorium-230, thorium-232, and total alpha energy emitted from radium were eliminated from further consideration for UCL calculations in the 200-BP-5 Groundwater OU. The background radionuclides potassium-40, radium-228, and total alpha energy emitted from radium were eliminated from further consideration for UCL calculations in the 200-PO-1 Groundwater OU.

7.1.1.3 *Radionuclides with Half-lives of Less than 3 Years*

Radionuclides that have half-lives of less than 3 years and that are not significant daughter products were eliminated from further consideration for UCL calculations. Based on this criterion, antimony-125, beryllium-7, cesium-134, and ruthenium-106 were excluded from further consideration for UCL calculations in both the 200-BP-5 and 200-PO-1 Groundwater OUs.

7.1.1.4 Analytes Without Known Toxicity Information

Analytes without known toxicity information were eliminated from further consideration for UCL calculations. For the 200-BP-5 Groundwater OU, a total of 81 analytes were eliminated based on this criterion, including the following:

- 5 anions, 1 cation, 15 general chemistry/water property parameters (including coliform bacteria), 4 total dioxin congeners, 4 total furan congeners, 5 metals, 6 pesticides, 2 radionuclides, 24 semi-volatile organic compounds (SVOCs), 4 total petroleum hydrocarbon (TPH) fractions, and 11 volatile organic compounds (VOCs).

For the 200-PO-1 Groundwater OU, a total of 77 analytes were eliminated based on this criterion, including the following:

- 5 anions, 1 cation, 16 general chemistry parameters (including ammonia, coliform bacteria, and total organic halides), 4 total dioxin congeners, 4 total furan congeners, 4 metals, 7 pesticides, 2 radionuclides, 22 SVOCs, 3 TPH fractions, and 9 VOCs.

7.1.2 Identify Non-detected Analytes

A total of 197 analytes were not detected in the 200-BP-5 Groundwater OU and 187 analytes were not detected in the 200-PO-1 Groundwater OU; these analytes are listed in Table 7-3 and Table 7-4, respectively. The tables provide sampling dates, total number of samples, and minimum and maximum MDLs.

Non-detected analytes in the 200-BP-5 Groundwater OU included 7 dioxin congeners, 9 furan congeners, 8 herbicides, 7 polychlorinated biphenyls (PCBs), 30 pesticides, 8 radionuclides, 48 SVOCs, and 80 VOCs.

Non-detected analytes in the 200-PO-1 Groundwater OU included 6 dioxin congeners, 10 furan congeners, 8 herbicides, 1 metal, 7 PCBs, 32 pesticides, 6 radionuclides, 47 SVOCs, and 70 VOCs.

7.2 ProUCL Output Files

The following section describes the ProUCL processing and extraction steps.

7.2.1 ProUCL Processing

Excel input files for each exposure area and individual well were imported into ProUCL and corresponding raw statistics and UCL output files were generated as described in Section 3.3.1. The resulting raw statistics and UCL output files were then converted to Excel files and archived in the ERMA under this ECF number in Calculation Folder B. The corresponding output file names are listed in Table 7-5 through Table 7-8 for the 200-BP-5 Groundwater OU and Table 7-9 through Table 7-12 for the 200-PO-1 Groundwater OU. Similar to the ProUCL input files (Table 4-1 through Table 4-4), these tables list pairs of raw statistics and UCL output files for each exposure area and well-specific location, one containing output for filtered samples (designated by a filename containing *_Y*) and another containing output for unfiltered samples (designated by a filename containing *_N*).

7.2.2 ProUCL Extraction

The selected statistical values listed in Section 3.3.1 were extracted from the ProUCL output files into an Excel spreadsheet. The extracted information has been archived in the ERMA under this ECF number in Calculation Folder C.

7.3 Selection of Exposure Point Concentrations

Exposure point concentrations were selected using the logic described in Section 3.3.2 and are summarized in Table 7-13 through Table 7-15 for the 200-BP-5 Groundwater OU and Table 7-16 through Table 7-18 for the 200-PO-1 Groundwater OU. These tables provide the EPCs identified for use in risk characterization for each OU. As discussed in Section 3.1.1, EPCs were computed for the full data sets (filtered and unfiltered samples) for each OU. Full EPC results for each OU have been archived in the ERMA (Calculation Folder C).

The EPCs shown in Table 7-13 through Table 7-18 are based on unfiltered sample data for all analytes except hexavalent chromium. Because the data sets for total chromium in both OUs are in general much more robust than the data sets for hexavalent chromium, and because filtered total chromium data effectively represent hexavalent chromium (WHC-SD-EN-TI-302, *Speciation and Transport Characteristics of Chromium in the 100D/H Areas of the Hanford Site*), the EPCs computed for filtered total chromium have been substituted for the EPCs computed for hexavalent chromium in Table 7-13 through Table 7-18. This substitution is reflected in the tables by the use of the analyte name "Hex Chromium (Cr-Filtered)". For completeness, the EPCs computed for all chromium data, including the unused EPCs computed for hexavalent chromium, are provided in Table 7-19 through Table 7-21 for the 200-BP-5 Groundwater OU and Table 7-22 through Table 7-24 for the 200-PO-1 Groundwater OU.

The 200-BP-5 Groundwater OU exposure area data set yielded 6 analytes with a recommended UCL greater than the maximum detected concentration. These analytes are listed in Table 7-25. The EPC decision logic for this data set is shown in Figure 7-1. For 2 of the 6 analytes (uranium [filtered] in WMA B-BX-BY Tank Farms and molybdenum [filtered] in 200-BP-5 West) the EPC defaulted to the maximum detected concentration because the Chebyshev (Mean, Sd) UCLs exceeded the maximum detected concentration. For the remaining 4 analytes (neptunium-237 in 200-BP-5 West, technetium-99 in Far Field [North of Gable Gap], and americium-241 and iodine 129 in Near River), the EPC defaulted to the maximum detected concentration because a Chebyshev (Mean, Sd) UCL was not calculated.

The 200-BP-5 Groundwater OU well-specific data set yielded 30 analytes with a recommended UCL greater than the maximum detected concentration. These analytes are listed in Table 7-26. The EPC decision logic for this data set is shown in Figure 7-2 and Figure 7-3. For 22 of the 30 analytes (tritium in well 299-E27-10; antimony in well 299-E27-23; vanadium in well 299-E33-12; cobalt-60 in well 299-E33-18; neptunium-237 in well 299-E33-343; chromium, chromium [filtered], plutonium-239/240, and copper [filtered] in well 299-E33-50; technetium-99 in well 299-E34-9; bis(2-ethylhexyl) phthalate and technetium-99 in well 699-52-55B; zinc in well 299-E33-15; cyanide in well 299-E33-17; copper [filtered] in well 299-E33-266; americium-241 in well 299-E33-341; americium-241 in well 299-E33-342; americium-241 and strontium-90 in well 299-E33-345; iron [filtered] and manganese [filtered] in well 699-50-56; iodine-129 in well 699-70-68;), the EPC defaulted to the maximum detected concentration because a Chebyshev (Mean, Sd) UCL was not calculated. For the remaining eight analytes (cyanide and iodine-129 in well 699-49-57A; barium [filtered] in well 699-64-62; technetium-99 and selenium [filtered] in well 299-E27-155; fluoride in well 299-E28-25; iodine-129 in well 699-50-59; fluoride in well 699-65-50), the EPC defaulted to the maximum detected concentration because the Chebyshev (Mean, Sd) UCL was greater than the maximum detected concentration.

The 200-PO-1 Groundwater OU exposure area data set yielded 6 analytes with a recommended UCL greater than the maximum detected concentration. These analytes are listed in Table 7-27. The EPC decision logic for this data set is shown in Figure 7-4. For 2 of the 6 analytes (lead in BC Cribs and Trenches and uranium-235 in Near River), the EPC defaulted to the maximum detected concentration because a Chebyshev (Mean, Sd) UCL was not calculated. For 3 analytes (molybdenum, molybdenum

[filtered], and uranium [filtered] in Near River), the EPC defaulted to the maximum detected concentration because the Chebyshev (Mean, Sd) UCL was greater than the maximum detected concentration. For one analyte (uranium in Near River), the EPC was set to the 97.5% Chebyshev (Mean, Sd) ULC.

The 200-PO-1 Groundwater OU well-specific data set yielded 38 analytes with a recommended UCL greater than the maximum detected concentration. These analytes are listed in Table 7-28. The EPC decision logic for this data set is shown in Figure 7-5 and Figure 7-6. For 17 of the 38 analytes (iron and uranium in well 299-E13-11; technetium-99 in well 299-E17-19; strontium in well 200-E25-3; iodine-129 in well 299-E25-42; uranium in well 499-S0-7; nitrate in well 499-S0-8; and barium [filtered] and strontium [filtered] in well 699-E25-34B; arsenic and technetium-99 in well 299-E24-23; barium in well 699-25-34D; barium and manganese in well 699-32-22B; uranium-238 in well 699-S6-E4A; and uranium-238 in well 699-S6-E4L; nitrate in well 699-S8-19), the EPC defaulted to the maximum detected concentration because the Chebyshev (Mean, Sd) UCL was greater than the maximum detected concentration. For 20 analytes (strontium-90 in well 299-E13-11; strontium-90 in well 299-E25-94; zinc [filtered] in well 499-S0-8; copper in well 699-13-3A; iron in well 699-43-44; strontium-90 in well 299-E17-1; iodine-129 and strontium-90 in well 299-E24-23; chloroform and antimony (filtered) in well 699-22-35; 1,1,1-trichloroethane and trichloroethene in well 699-23-34A; 1,1,1-trichloroethane and trichloroethene in well 699-23-34B; 1,1,1-trichloroethane in well 699-24-33; trichloroethene in well 699-24-34A; trichloroethene and antimony (filtered) in well 699-24-34B; iron and zinc in well 699-32-43), the EPC defaulted to the maximum detected concentration because a Chebyshev (Mean, Sd) UCLs was not calculated. For one analyte (iron in well 299-E17-1), the EPC was set to the 97.5% Chebyshev (Mean, Sd) UCL.

Software Installation and Checkout Form for ProUCL

CHPRC SOFTWARE INSTALLATION AND CHECKOUT FORM

Software Owner Instructions:

Complete Fields 1-13, then run test cases in Field 14. Compare test case results listed in Field 15 to corresponding Test Report outputs. If results are the same, sign and date Field 19. If not, resolve differences and repeat above steps.

Software Subject Matter Expert Instructions:

Assign test personnel. Approve the installation of the code by signing and dating Field 21, then maintain form as part of the software support documentation.

GENERAL INFORMATION:1. Software Name: ProUCL Version 4.00.05Software Version No.: 4.0**EXECUTABLE INFORMATION:**

2. Executable Name (include path):

Path:

6. Hardware System (i.e., property number or ID):

INTERA-00470

7. Operating System (include version number):

Windows 7 (64-bit) SP-1

8. Open Problem Report? No Yes PR/CR No.**TEST CASE INFORMATION:**

9. Directory/Path:

\ProUCLv4.00.05\

10. Procedure(s):

CHPRC-01270 Rev. 0, Section 13.3.3.9 (Software Test Plan)

11. Libraries:

N/A

12. Input Files:

ProUCL InstallationTestCase.xls

13. Output Files:

to screen

14. Test Cases:

ITC-ProUCL-1, Installation Test Problem

15. Test Case Results:

Passed

16. Test Performed By: RE Dockter

17. Test Results: Satisfactory, Accepted for Use Unsatisfactory

18. Disposition (include HISI update):

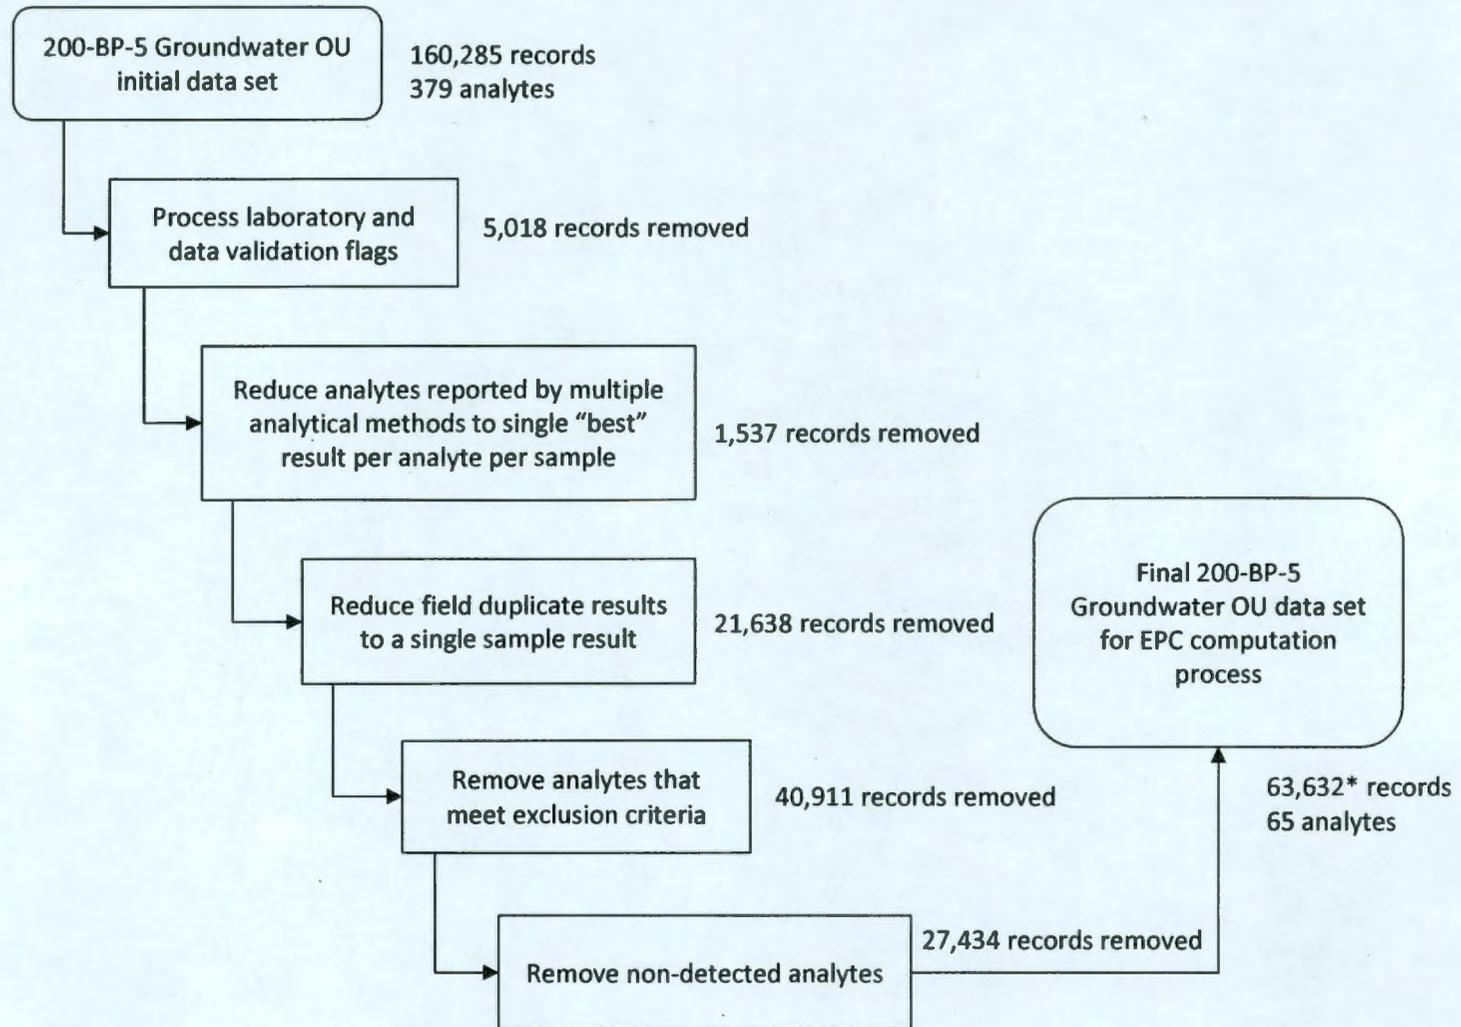

Installation added to HISI registry. -WE Nichols

Table 7-13. 200-BP-5 Operable Unit Exposure Area Exposure Point Concentration Summary

Exposure Area	Analyte Group	Analyte	CAS No.	Total Samples	Total Detects	Total Non-Detects	Frequency of Detection (%)	Units	Minimum Detection Limit	Maximum Detection Limit	Minimum Detected Result	Maximum Detected Result	Coefficient of Variation	Exposure Point Concentration	Exposure Point Concentration Basis	Comment
B Plant	non-Rad	Acetone	67-64-1	4	0	4	0	µg/L	1.0	5.0	--	--	--	--	--	Warning: This data set only has 4 observations! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Acetone was not processed!
B Plant	non-Rad	Aluminum	7429-90-5	4	0	4	0	µg/L	10	20	--	--	--	--	--	Warning: This data set only has 4 observations! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Aluminum was not processed!
B Plant	non-Rad	Antimony	7440-36-0	8	5	3	63	µg/L	0.60	0.60	44	85	0.25	75	95% KM (Percentile Bootstrap) UCL	Warning: There are only 5 Detected Values in this data Note: It should be noted that even though bootstrap may be performed on this data set the resulting calculations may not be reliable enough to draw conclusions
B Plant	non-Rad	Arsenic	7440-38-2	18	18	0	100	µg/L	--	--	1.2	6.7	0.40	4.5	95% Student's-t UCL	
B Plant	non-Rad	Barium	7440-39-3	28	28	0	100	µg/L	--	--	47	100	0.20	70	95% Student's-t UCL	
B Plant	non-Rad	Benzene	71-43-2	4	0	4	0	µg/L	1.0	1.0	--	--	--	--	--	Warning: This data set only has 4 observations! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Benzene was not processed!
B Plant	non-Rad	Beryllium	7440-41-7	24	0	24	0	µg/L	0.20	4.0	--	--	--	--	--	Warning: All observations are Non-Detects (NDs), therefore all statistics and estimates should also be NDs! Specifically, sample mean, UCLs, UPLs, and other statistics are also NDs lying below the largest detection limit! The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).
B Plant	non-Rad	Bis(2-ethylhexyl) phthalate	117-81-7	4	0	4	0	µg/L	0.90	1.0	--	--	--	--	--	Warning: This data set only has 4 observations! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Bis(2-ethylhexyl) phthalate was not processed!
B Plant	non-Rad	Boron	7440-42-8	3	3	0	100	µg/L	--	--	20	53	0.57	53	Maximum Detect	Warning: This data set only has 3 observations! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Boron was not processed!
B Plant	non-Rad	Cadmium	7440-43-9	28	1	27	3.6	µg/L	0.10	4.1	5.1	5.1	0	5.1	Maximum Detect	Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set! It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, BTV). The data set for variable Cadmium was not processed!
B Plant	non-Rad	Carbon disulfide	75-15-0	4	0	4	0	µg/L	1.0	1.0	--	--	--	--	--	Warning: This data set only has 4 observations! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Carbon disulfide was not processed!
B Plant	non-Rad	Carbon tetrachloride	56-23-5	4	0	4	0	µg/L	1.0	1.0	--	--	--	--	--	Warning: This data set only has 4 observations! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Carbon tetrachloride was not processed!
B Plant	non-Rad	Chloroform	67-66-3	4	0	4	0	µg/L	1.0	1.0	--	--	--	--	--	Warning: This data set only has 4 observations! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Chloroform was not processed!
B Plant	non-Rad	Chromium	7440-47-3	28	9	19	32	µg/L	5.0	14	0.83	36	0.96	8.5	95% KM (Percentile Bootstrap) UCL	Warning: There are only 9 Detected Values in this data Note: It should be noted that even though bootstrap may be performed on this data set the resulting calculations may not be reliable enough to draw conclusions
B Plant	non-Rad	Cobalt	7440-48-4	28	0	28	0	µg/L	0.10	4.1	--	--	--	--	--	Warning: All observations are Non-Detects (NDs), therefore all statistics and estimates should also be NDs! Specifically, sample mean, UCLs, UPLs, and other statistics are also NDs lying below the largest detection limit! The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).
B Plant	non-Rad	Copper	7440-50-8	28	5	23	18	µg/L	4.0	6.0	0.28	8.3	0.89	3.2	95% KM (Percentile Bootstrap) UCL	Warning: There are only 5 Detected Values in this data Note: It should be noted that even though bootstrap may be performed on this data set the resulting calculations may not be reliable enough to draw conclusions
B Plant	non-Rad	Cyanide	57-12-5	7	4	3	57	µg/L	4.0	4.0	4.2	9.0	0.35	6.9	95% KM (Percentile Bootstrap) UCL	Warning: There are only 4 Distinct Detected Values in this data Note: It should be noted that even though bootstrap may be performed on this data set the resulting calculations may not be reliable enough to draw conclusions
B Plant	non-Rad	Fluoride	16984-48-8	57	57	0	100	µg/L	--	--	99	3,270	1.4	892	95% Chebyshev (Mean, Sd) UCL	

Table 7-13. 200-SF-5 Operable Unit Exposure Area Exposure Point Concentration Summary

Exposure Area	Analyte Group	Analyte	CAS No.	Total Samples	Total Detects	Total Non-Detects	Frequency of Detection (%)	Minimum Detection Limit Units	Minimum Detection Limit	Maximum Detection Limit	Minimum Detected Result	Maximum Detected Result	Coefficient of Variation	Exposure Point Concentration	Exposure Point Concentration Basis	Comment
B Plant	non-Rad	Hex Chromium (Cr-Filtered)	18540-29-9	23	2	21	8.7	µg/L	5.0	14	5.1	5.4	0.040	5.4	95% KM (% Bootstrap) UCL	Warning: Data set has only 2 Distinct Detected Values. This may not be adequate enough to compute meaningful and reliable test statistics and estimates. The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).
B Plant	non-Rad	Iron	7439-89-6	28	21	7	75	µg/L	19	38	38	400	0.83	196	95% KM (Percentile Bootstrap) UCL	
B Plant	non-Rad	Lead	7439-92-1	3	0	3	0	µg/L	0.10	0.10	--	--	--	--	--	Warning: This data set only has 3 observations! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Lead was not processed!
B Plant	non-Rad	Manganese	7439-96-5	28	7	21	25	µg/L	0.20	6.0	0.24	29	0.93	9.3	95% KM (Percentile Bootstrap) UCL	Warning: There are only 7 Detected Values in this data Note: It should be noted that even though bootstrap may be performed on this data set the resulting calculations may not be reliable enough to draw conclusions
B Plant	non-Rad	Mercury	7439-97-6	4	0	4	0	µg/L	0.060	0.10	--	--	--	--	--	Warning: This data set only has 4 observations! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Mercury was not processed!
B Plant	non-Rad	Methylene chloride	75-09-2	4	0	4	0	µg/L	1.0	1.0	--	--	--	--	--	Warning: This data set only has 4 observations! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Methylene chloride was not processed!
B Plant	non-Rad	Molybdenum	7439-98-7	3	3	0	100	µg/L	--	--	3.6	7.1	0.33	7.1	Maximum Detect	Warning: This data set only has 3 observations! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Molybdenum was not processed!
B Plant	non-Rad	Nickel	7440-02-0	28	6	22	21	µg/L	0.20	5.1	0.94	20	0.85	8.5	95% KM (Percentile Bootstrap) UCL	Warning: There are only 6 Detected Values in this data Note: It should be noted that even though bootstrap may be performed on this data set the resulting calculations may not be reliable enough to draw conclusions
B Plant	non-Rad	Nitrate	14797-55-8	57	57	0	100	µg/L	--	--	30,100	420,000	0.73	86,183	95% Modified-t UCL

Table 7-14. 200-BP-5 Operable Unit Well-Specific Exposure Point Concentration Summary

Well Name	Analyte Group	Analyte	CAS No.	Total Samples	Total Detects	Total Non-Detects	Frequency of Detection (%)	Minimum Detection Limit	Maximum Detection Limit	Minimum Detected Result	Maximum Detected Result	Coefficient of Variation	Exposure Point Concentration	Exposure Point Concentration Basis	Comment	
699-52-55B	non-Rad	Silver	7440-22-4	8	0	8	0	µg/L	4.0	7.0	--	--	--	--	Warning: All observations are Non-Detects (NDs), therefore all statistics and estimates should also be NDs! Specifically, sample mean, UCLs, UPLs, and other statistics are also NDs lying below the largest detection limit! The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).	
699-52-55B	non-Rad	Strontium	7440-24-6	8	8	0	100	µg/L	--	--	235	348	0.12	296	95% Student's-t UCL	Warning: There are only 8 Values in this data Note: It should be noted that even though bootstrap methods may be performed on this data set, the resulting calculations may not be reliable enough to draw conclusions.
699-52-55B	non-Rad	Thallium	7440-28-0	6	1	5	17	µg/L	0.050	0.10	0.065	0.065	--	0.065	Maximum Detect	Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set! It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, BTV). The data set for variable Thallium was not processed!
699-52-55B	non-Rad	Toluene	108-88-3	6	1	5	17	µg/L	1.0	1.0	2.3	2.3	--	2.3	Maximum Detect	Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set! It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, BTV). The data set for variable Toluene was not processed!
699-52-55B	non-Rad	Tributyl phosphate	126-73-8	6	1	5	17	µg/L	0.48	1.0	8.4	8.4	--	8.4	Maximum Detect	Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set! It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, BTV). The data set for variable Tributyl phosphate was not processed!
699-52-55B	non-Rad	Trichloroethene	79-01-6	6	0	6	0	µg/L	1.0	1.0	--	--	--	--	--	Warning: All observations are Non-Detects (NDs), therefore all statistics and estimates should also be NDs! Specifically, sample mean, UCLs, UPLs, and other statistics are also NDs lying below the largest detection limit! The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).
699-52-55B	non-Rad	Uranium	7440-61-1	7	7	0	100	µg/L	--	--	2.2	3.6	0.14	3.3	95% Student's-t UCL	Warning: There are only 7 Values in this data Note: It should be noted that even though bootstrap methods may be performed on this data set, the resulting calculations may not be reliable enough to draw conclusions.
699-52-55B	non-Rad	Vanadium	7440-62-2	8	2	6	25	µg/L	12	17	9.0	11	0.11	11	95% KM (% Bootstrap) UCL	Warning: Recommended UCL exceeds the maximum observation Note: DL/2 is not a recommended method. Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
699-52-55B	non-Rad	Zinc	7440-66-6	8	6	2	75	µg/L	6.0	6.0	7.9	97	1.0	48	95% KM (t) UCL	Warning: There are only 6 Detected Values in this data Note: It should be noted that even though bootstrap may be performed on this data set the resulting calculations may not be reliable enough to draw conclusions.
699-52-55B	Rad	Americium-241	14596-10-2	6	2	4	33	pCi/L	0.010	0.056	0.094	0.10	0.044	0.10	95% KM (% Bootstrap) UCL	Warning: Data set has only 2 Distinct Detected Values. This may not be adequate enough to compute meaningful and reliable test statistics and estimates. The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).
699-52-55B	Rad	Carbon-14	14762-75-5	6	0	6	0	pCi/L	-4.30E+00	3.3	--	--	--	--	--	Warning: All observations are Non-Detects (NDs), therefore all statistics and estimates should also be NDs! Specifically, sample mean, UCLs, UPLs, and other statistics are also NDs lying below the largest detection limit! The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).
699-52-55B	Rad	Cesium-137	10045-97-3	6	0	6	0	pCi/L	-1.33E+00	0.66	--	--	--	--	--	Warning: All observations are Non-Detects (NDs), therefore all statistics and estimates should also be NDs! Specifically, sample mean, UCLs, UPLs, and other statistics are also NDs lying below the largest detection limit! The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).
699-52-55B	Rad	Cobalt-60	10198-40-0	6	0	6	0	pCi/L	-9.17E-01	1.0	--	--	--	--	--	Warning: All observations are Non-Detects (NDs), therefore all statistics and estimates should also be NDs! Specifically, sample mean, UCLs, UPLs, and other statistics are also NDs lying below the largest detection limit! The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).

Table 7-14. 200-BP-5 Operable Unit Well-Specific Exposure Point Concentration Summary

Well Name	Analyte Group	Analyte	CAS No.	Total Samples	Total Detects	Total Non-Detects	Frequency of Detection (%)	Minimum Detection Limit	Maximum Detection Limit	Minimum Detected Result	Maximum Detected Result	Coefficient of Variation	Exposure Point Concentration	Exposure Point Concentration Basis	Comment

Table 7-17. 200-P0-1 Operable Unit Well-Specific Exposure Point Concentration Summary

Well Name	Analyte Group	Analyte	CAS No.	Total Samples	Mean Detects	Total Non-Detects	Frequency of Detection (%)	Units	Minimum Detection Limit	Maximum Detection Limit	Minimum Detected Result	Maximum Detected Result	Coefficient of Variation	Exposure Point Concentration	Exposure Point Concentration Basis	Comment
299-E25-29P	non-Rad	Zinc	7440-66-6	5	3	2	60	µg/L	5.0	6.0	5.3	9.0	0.26	9.0	95% KM (Percentile Bootstrap) UCL	Warning: There are only 3 Distinct Detected Values in this data set. The number of detected data may not be adequate enough to perform GOF tests, bootstrap, and ROS methods. Those methods will return a 'N/A' value on your output display!
299-E25-29P	Rad	Iodine-129	15046-84-1	5	4	1	80	pCi/L	1.2	1.2	1.5	3.2	0.29	3.0	95% KM (t) UCL	Warning: There are only 4 Distinct Detected Values in this data set. Note: It should be noted that even though bootstrap may be performed on this data set the resulting calculations may not be reliable enough to draw conclusions.
299-E25-29P	Rad	Tritium	10028-17-8	5	5	0	100	pCi/L	--	--	3,600	6,400	0.26	5,645	95% Student's-t UCL	Warning: There are only 5 Values in this data set. Note: It should be noted that even though bootstrap methods may be performed on this data set, the resulting calculations may not be reliable enough to draw conclusions.
299-E25-3	non-Rad	Antimony	7440-36-0	2	1	1	50	µg/L	4.0	4.0	54	54	--	54	Maximum Detect	Warning: This data set only has 2 observations! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Antimony was not processed!
299-E25-3	non-Rad	Arsenic	7440-38-2	5	5	0	100	µg/L	--	--	2.5	5.8	0.28	5.7	95% Student's-t UCL	Warning: There are only 5 Values in this data set. Note: It should be noted that even though bootstrap methods may be performed on this data set, the resulting calculations may not be reliable enough to draw conclusions.
299-E25-3	non-Rad	Barium	7440-39-3	5	5	0	100	µg/L	--	--	38	41	0.036	40	95% Student's-t UCL	Warning: There are only 5 Values in this data set. Note: It should be noted that even though bootstrap methods may be performed on this data set, the resulting calculations may not be reliable enough to draw conclusions.
299-E25-3	non-Rad	Beryllium	7440-41-7	5	0	5	0	µg/L	0.50	4.0	--	--	--	--	--	Warning: All observations are Non-Detects (NDs), therefore all statistics and estimates should also be NDs! Specifically, sample mean, UCLs, UPLs, and other statistics are also NDs lying below the largest detection limit! The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTU).
299-E25-3	non-Rad	Cadmium	7440-43-9	5	0	5	0	µg/L	0.45	4.0	--	--	--	--	--	Warning: All observations are Non-Detects (NDs), therefore all statistics and estimates should also be NDs! Specifically, sample mean, UCLs, UPLs, and other statistics are also NDs lying below the largest detection limit! The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTU).
299-E25-3	non-Rad	Chromium	7440-47-3	5	0	5	0	µg/L	3.1	13	--	--	--	--	--	Warning: All observations are Non-Detects (NDs), therefore all statistics and estimates should also be NDs! Specifically, sample mean, UCLs, UPLs, and other statistics are also NDs lying below the largest detection limit! The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTU).
299-E25-3	non-Rad	Cobalt	7440-48-4	5	0	5	0	µg/L	4.0	4.0	--	--	--	--	--	Warning: All observations are Non-Detects (NDs), therefore all statistics and estimates should also be NDs! Specifically, sample mean, UCLs, UPLs, and other statistics are also NDs lying below the largest detection limit! The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTU).
299-E25-3	non-Rad	Copper	7440-50-8	5	0	5	0	µg/L	4.0	4.6	--	--	--	--	--	Warning: All observations are Non-Detects (NDs), therefore all statistics and estimates should also be NDs! Specifically, sample mean, UCLs, UPLs, and other statistics are also NDs lying below the largest detection limit! The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTU).
299-E25-3	non-Rad	Fluoride	16984-48-8	5	2	3	40	µg/L	60	250	109	167	0.30	167	95% KM (% Bootstrap) UCL	Warning: Data set has only 2 Distinct Detected Values. This may not be adequate enough to compute meaningful and reliable test statistics and estimates. The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTU).
299-E25-3	non-Rad	Hex Chromium (Cr-Filtered)	18540-29-9	3	0	3	0	µg/L	3.1	13	--	--	--	--	--	Warning: This data set only has 3 observations! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Chromium was not processed!
299-E25-3	non-Rad	Iron	7439-89-6	5	4	1	80	µg/L	19	19	27	123	0.66	95	95% KM (t) UCL	Warning: There are only 4 Distinct Detected Values in this data set. Note: It should be noted that even though bootstrap may be performed on this data set the resulting calculations may not be reliable enough to draw conclusions.
299-E25-3	non-Rad	Manganese	7439-96-5	5	1	4	20	µg/L	4.0	4.0	4.3	4.3	--	4.3	Maximum Detect	Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set! It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, BTU). The data set for variable Manganese was not processed!
299-E25-3	non-Rad	Nickel	7440-02-0	5	0	5	0	µg/L	4.0	13	--	--	--	--	--	Warning: All observations are Non-Detects (NDs), therefore all statistics and estimates should also be NDs! Specifically, sample mean, UCLs, UPLs, and other statistics are also NDs lying below the largest detection limit! The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTU).
299-E25-3	non-Rad	Nitrate	14797-55-8	5	5	0	100	µg/L	--	--	32,700	39,300	0.068	38,918	95% Student's-t UCL	Warning: There are only 5 Values in this data set. Note: It should be noted that even though bootstrap methods may be performed on this data set, the resulting calculations may not be reliable enough to draw conclusions.

699-32-22B	non-Rad	1,1-Dichloroethene	75-35-4	1	0	1	0	µg/L	0.085	0.085	--	--	--	--	--	Warning: This data set only has 1 observations! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable 1,1-Dichloroethene was not processed!
699-32-22B	non-Rad	Acetone	67-64-1	1	0	1	0	µg/L	0.56	0.56	--	--	--	--	--	Warning: This data set only has 1 observations! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Acetone was not processed!
699-32-22B	non-Rad	Antimony	7440-36-0	1	0	1	0	µg/L	4.0	4.0	--	--	--	--	--	Warning: This data set only has 1 observations! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Antimony was not processed!
699-32-22B	non-Rad	Arsenic	7440-38-2	1	0	1	0	µg/L	0.40	0.40	--	--	--	--	--	Warning: This data set only has 1 observations! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Arsenic was not processed!
699-32-22B	non-Rad	Barium	7440-39-3	5	5	0	100	µg/L	--	--	12	259	1.1	259	Maximum Detect	Recommended UCL Exceeds Maximum Concentration; EPC defaulting to Maximum Concentration since 97.5% and 99% Chebyshev (Mean, SD) UCLs also exceed maximum concentration.
699-32-22B	non-Rad	Beryllium	7440-41-7	5	0	5	0	µg/L	0.61	4.0	--	--	--	--	--	Warning: All observations are Non-Detects (NDs), therefore all statistics and estimates should also be NDs! Specifically, sample mean, UCLs, UPLs, and other statistics are also NDs lying below the largest detection limit! The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, IDV).
699-32-22B	non-Rad	Bis(2-ethylhexyl) phthalate	117-81-7	1	1	0	100	µg/L	--	--	1.0	1.0	--	1.0	Maximum Detect	Warning: This data set only has 1 observations! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Bis(2-ethylhexyl) phthalate was not processed!
699-32-22B	non-Rad	Bromodichloromethane	75-27-4	1	0	1	0	µg/L	0.088	0.088	--	--	--	--	--	Warning: This data set only has 1 observations! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Bromodichloromethane was not processed!
699-32-22B	non-Rad	Bromoform	75-25-2	1	0	1	0	µg/L	0.27	0.27	--	--	--	--	--	Warning: This data set only has 1 observations! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Bromoform was not processed!
699-32-22B	non-Rad	Bromomethane	74-83-9	1	0	1	0	µg/L	0.50	0.50	--	--	--	--	--	Warning: This data set only has 1 observations! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Bromomethane was not processed!
699-32-22B	non-Rad	Cadmium	7440-43-9	5	0	5	0	µg/L	0.91	4.0	--	--	--	--	--	Warning: All observations are Non-Detects (NDs), therefore all statistics and estimates should also be NDs! Specifically, sample mean, UCLs, UPLs, and other statistics are also NDs lying below the largest detection limit! The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, IDV).
699-32-22B	non-Rad	Carbon disulfide	75-15-0	1	0	1	0	µg/L	1.0	1.0	--	--	--	--	--	Warning: This data set only has 1 observations! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Carbon disulfide was not processed!
699-32-22B	non-Rad	Carbon tetrachloride	56-23-5	1	0	1	0	µg/L	0.042	0.042	--	--	--	--	--	Warning: This data set only has 1 observations! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Carbon tetrachloride was not processed!
699-32-22B	non-Rad	Chloroform	67-66-3	1	0	1	0	µg/L	0.080	0.080	--	--	--	--	--	Warning: This data set only has 1 observations! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Chloroform was not processed!
699-32-22B	non-Rad	Chromium	7440-47-3	5	0	5	0	µg/L	3.1	14	--	--	--	--	--	Warning: All observations are Non-Detects (NDs), therefore all statistics and estimates should also be NDs! Specifically, sample mean, UCLs, UPLs, and other statistics are also NDs lying below the largest detection limit! The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, IDV).

Table 7-1E. 200-PQ-1 Operable Unit Well-Specific Exposure Point Concentration Summary

Well Name	Analyte Group	Analyte	CAS No.	Total Samples	Non-Detects	Total Non-Detects	Frequency of Detection (%)	Units	Minimum Detection Limit	Maximum Detection Limit	Minimum Detected Result	Maximum Detected Result	Coefficient of Variation	Exposure Point Concentration	Exposure Point Concentration Basis	Comment
699-32-22B	non-Rad	Cobalt	7440-48-4	4	0	4	0	µg/L	4.0	4.0	--	--	--	--	--	Warning: This data set only has 4 observations! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Cobalt was not processed!
699-32-22B	non-Rad	Copper	7440-50-8	5	0	5	0	µg/L	4.0	6.0	--	--	--	--	--	Warning: All observations are Non-Detects (NDs), therefore all statistics and estimates should also be NDs! Specifically, sample mean, UCLs, UPLs, and other statistics are also NDs lying below the largest detection limit! The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, EDV).
699-32-22B	non-Rad	Dibromochloromethane	124-48-1	1	0	1	0	µg/L	0.17	0.17	--	--	--	--	--	Warning: This data set only has 1 observation! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Dibromochloromethane was not processed!
699-32-22B	non-Rad	Ethyl methacrylate	97-63-2	1	0	1	0	µg/L	0.39	0.39	--	--	--	--	--	Warning: This data set only has 1 observation! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Ethyl methacrylate was not processed!
699-32-22B	non-Rad	Ethylbenzene	100-41-4	1	0	1	0	µg/L	0.061	0.061	--	--	--	--	--	Warning: This data set only has 1 observation! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Ethylbenzene was not processed!
699-32-22B	non-Rad	Fluoride	16984-48-8	5	5	0	100	µg/L	--	--	1,100	1,200	0.033	1,176	95% Student's-t UCL	Warning: A sample size of 'n' = 5 may not be adequate enough to compute meaningful and reliable test statistics and estimates! It is suggested to collect at least 8 to 10 observations using these statistical methods! If possible compute and collect Data Quality Objectives (DQO) based sample size and analytical results.
699-32-22B	non-Rad	Hex Chromium (Cr-Filtered)	18540-29-9	3	0	3	0	µg/L	10	14	--	--	--	--	--	Warning: This data set only has 3 observations! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Chromium was not processed!
699-32-22B	non-Rad	Iron	7439-89-6	5	5	0	100	µg/L	--	--	538	7,890	0.95	5,897	95% Student's-t UCL	Warning: There are only 5 Values in this data Note: It should be noted that even though bootstrap methods may be performed on this data set, the resulting calculations may not be reliable enough to draw conclusions.
699-32-22B	non-Rad	Lead	7439-92-1	1	1	0	100	µg/L	--	--	0.81	0.81	--	0.81	Maximum Detect	Warning: This data set only has 1 observation! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Lead was not processed!
699-32-22B	non-Rad	Manganese	7439-96-5	5	5	0	100	µg/L	--	--	7.6	462	1.5	462	Maximum Detect	Recommended UCL Exceeds Maximum Concentration; EPC defaulting to Maximum Concentration since 97.5% and 99% Chebyshev(Median, 5) UCLs also exceed maximum concentration.
699-32-22B	non-Rad	Methylene chloride	75-09-2	1	0	1	0	µg/L	0.091	0.091	--	--	--	--	--	Warning: This data set only has 1 observation! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Methylene chloride was not processed!
699-32-22B	non-Rad	Nickel	7440-02-0	5	0	5	0	µg/L	4.0	67	--	--	--	--	--	Warning: All observations are Non-Detects (NDs), therefore all statistics and estimates should also be NDs! Specifically, sample mean, UCLs, UPLs, and other statistics are also NDs lying below the largest detection limit! The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, EDV).
699-32-22B	non-Rad	Nitrate	14797-55-8	5	0	5	0	µg/L	38	274	--	--	--	--	--	Warning: All observations are Non-Detects (NDs), therefore all statistics and estimates should also be NDs! Specifically, sample mean, UCLs, UPLs, and other statistics are also NDs lying below the largest detection limit! The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, EDV).
699-32-22B	non-Rad	Nitrite	14797-65-0	5	1	4	20	µg/L	9.9	118	325	325	--	325	Maximum Detect	Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set! It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, EDV). The data set for variable Nitrite was not processed!
699-32-22B	non-Rad	Silver	7440-22-4	4	0	4	0	µg/L	4.0	7.0	--	--	--	--	--	Warning: This data set only has 4 observations! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Silver was not processed!
699-32-22B	non-Rad	Strontium	7440-24-6	5	5	0	100	µg/L	--	--	22	170	0.81	126	95% Student's-t UCL	Warning: There are only 5 Values in this data Note: It should be noted that even though bootstrap methods may be performed on this data set, the resulting calculations may not be reliable enough to draw conclusions.
699-32-22B	non-Rad	Tetrachloroethene	127-18-4	1	0	1	0	µg/L	0.14	0.14	--	--	--	--	--	Warning: This data set only has 1 observation! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Tetrachloroethene was not processed!
699-32-22B	non-Rad	Thallium	7440-28-0	1	0	1	0	µg/L	0.050	0.050	--	--	--	--	--	Warning: This data set only has 1 observation! Data set is too small to compute reliable and meaningful statistics and estimates! The data set for variable Thallium was not processed!
