CH2MHill Plateau Remediation Company

P.O. Box 1600

Richland, Washington 99352

August 18, 2017

Attention: Scot Fitzgerald

SDG : SL2590

Number of Samples : 7 samples / 2 water extractions

Sample Matrix : Soil

Data Deliverable : Summary

Date SDG Closed : July 18, 2017

**II. Introduction**

On July 18, 7 samples were received by TestAmerica - St. Louis for analysis. The samples were received within temperature criteria. See the COC and receipt checklists for documentation of any variations on receipt conditions and temperature. Upon receipt, samples were given laboratory IDs to correspond with specific client IDs. Please refer to the Sample Summary sheets attached to this case narrative. This report is incomplete without the narrative.

The following SAFs are associated with this SDG: F17-009

**Due to FedEx delay, cooler was received at 12.7 C. Cooler contained 4 ice packs that were thawed. Per SIR17-0836, the analyses were performed and reported.**

**III. Analytical Results/ Methodology**

The analytical results for this report are presented by analytical test. Each set of data includes sample identification information, analytical results and the appropriate detection limits. All results are based upon samples as they were received, i.e. wet weight, unless otherwise noted on the data sheets. See the attached Methods Summary Form for the methods used in this SDG.

MS/MSD/Dup analysis was done per the client requirements. Analytical batches that did not contain matrix QC were analyzed with an LCS/LCS duplicate.

Note: For Metals analyses, per standard practice, all 6020 water and soil samples are initially prepared at 2x dilution. This standard dilution does not affect reporting limits as MDL studies are also prepared in the same manner. These dilutions do not necessitate a narrative note; however, they are flagged "D" due to a limitation in the LIMS.

For solid matrices, all Metals analyses (including Hg) use a Standard Reference Material for the Laboratory Control Sample (LCS). Certificate for this source material may be obtained from TASL.

For Anion analysis, samples have been started at a 2x dilution per CHPRC direction. The samples are flagged accordingly with a "D" flag if sample concentration is above the MDL/RL. Non-conformance will be included in the below section only if dilution is greater than 2x.

For WTPH methods, the lab utilizes method 8015B. Per CHPRC direction, the method name in the electronic data has been modified to read WTPH in the place of 8015B.

Per CHPRC direction, due to the short hold times for Nitrate, Nitrite and Phosphate by IC (48 hours) as well as pH analysis (24 hours), a SIR request is not needed when samples are run outside 1x hold but within 2x hold. A narrative comment will be included below if a sample is run outside the lab-specified hold time for waters.

**Case Narrative**

Client: CH2M Hill Plateau Remediation Company  
 Project/Site: F17-009

TestAmerica Job ID: 160-23370-1  
 SDG: SL2590

**Job ID: 160-23370-1 (Continued)****Laboratory: TestAmerica St. Louis (Continued)**

For extractable and volatile organic analyses, several analytes are considered poor performers and will not meet CHPRC QC limits. Per CHPRC direction, the lab's statistical limits have been reported. Excursions outside these statistical limits will include a non-conformance in the sections below.

**IV. Definitions**

QCBLK-	Quality Control Blank, Method Blank
QCLCS-	Quality Control Laboratory Control Sample, Blank Spike
DUP-	Laboratory Duplicate
MS-	Matrix Spike
MSD-	Matrix Spike Duplicate

The term "Detection Limit" used in the analytical data report refers to either the lab's standard reporting limits or contractually required reporting limits, whichever is applicable.

The following data qualifiers may be applicable to the results in this report, as appropriate.

- **B** - For inorganic/radiochemistry analyses, the sample result is greater than the MDL/MDC but less than the RL.
- **B** - For organic analyses, Method Blank contamination. The Method Blank contains the target analyte above the MDL/RL and Method Blank is greater than 5% of the sample concentration.
- **B** - For inorganics and radiochemistry, Method Blank reported above the MDC/MDL.
- **J** - For organic analyses, the sample is estimated and less than the RL. If on Method Blank, indicates Method Blank contamination.
- **C** - For inorganics and radiochemistry analyses, Method Blank contamination. The Method Blank contains the target analyte at a concentration above the MDL/RL and Method Blank concentration is greater than 5% of the sample concentration.
- **D** - For all analyses, the sample result was obtained from the analysis of a dilution. For ICPMS Metals analyses, per standard practice, all samples are initially prepared at a 2x dilution. This standard dilution does not affect reporting limits as MDL studies are also prepared in the same manner and will not be narrated below. Only dilutions above 2x will be narrated and considered a true dilution for these samples.
- **N** - For inorganics, rad and GC analyses, the spike/spike duplicate recoveries are outside QC limits.
- **T** - For GCMS analyses, the spike/spike duplicate recoveries are outside QC limits.
- **O** - For all analyses, the LCS (LCSD) recoveries are outside QC limits.
- **P** - For organic analyses (PCB/Pests only), the aroclor target analyte has greater than 25% difference for detected concentrations between the two GC columns.
- **X**- Organics and Anions IC - Sample concentration over calibration and/or surrogate recovery outside QC limits.
- **X**- Inorganics - The analyte present in the original sample is > 4x the spike concentration.
- **X**- Radiochemistry - Carrier or Tracer recovery is outside limits.
- **Z**- Sample was prepped or analyzed beyond the specified sample holding time.
- **y** - RPD is outside established limits.

**Water Extraction**

As per client request, the following soil samples are to be run as water extractions necessitating a DI-prep to be performed. Samples were prepped at 1:1 ratio in a 1L poly container. Amount of sample and DI water used listed in attached DI-prep document in the Level IV data. Samples were then shaken by hand to break up any large soil clumps before placing on a shaker table for 15 minutes. Samples were then allowed to settle for 1 hour before decanting the supernatant into a new 500 mL poly container. After preparation, samples were made available to the lab for analysis. B3BMR4 (160-23370-7), B3BMN1 (160-23370-9) and B3BMV1 (160-23591-5)

**Semivolatiles**

**Batch: 319010**

The continuing calibration verification (CCV) associated with batch 160-319010 recovered above the upper control limit for surrogate Nitrobenzene-d5. The QC controls and all samples associated with this CCV were within the control limits for the affected analyte; therefore, the data have been reported. The following samples are impacted: B3BMN0 (160-23370-1), B3BMN7 (160-23370-2), B3BMP2 (160-23370-3), B3BMP7 (160-23370-4), B3BMR3 (160-23370-5), (CCVIS 160-319010/3), (LCS 160-318471/2-A), (MB 160-318471/1-A),

**Case Narrative**

Client: CH2M Hill Plateau Remediation Company  
 Project/Site: F17-009

TestAmerica Job ID: 160-23370-1  
 SDG: SL2590

**Job ID: 160-23370-1 (Continued)****Laboratory: TestAmerica St. Louis (Continued)**

(160-23370-B-1-B MS) and (160-23370-B-1-C MSD).

The surrogate recovery for the Blank was outside the upper control limit for Terphenyl-d14. The samples are outside of the 2X holding window and thus will not be re-prepped and re-analyzed. (MB 160-318471/1-A)

The % recovery for tributyl phosphate (TBP) in the LCS is outside of the advisory QC limits of 70-130 %. These limits are advisory limits only until there are sufficient data points to generate in house QC limits. Results are provided with this narrative. B3BMN0 (160-23370-1), B3BMN7 (160-23370-2), B3BMP2 (160-23370-3), B3BMP7 (160-23370-4), B3BMR3 (160-23370-5), (LCS 160-318471/2-A) This analyte has been qualified accordingly with an "o" flag in the associated samples.

Surrogate recoveries in the LCS are outside the lower QC limits for 2,4,6-Tribromophenol, 2-Fluorobiphenyl, 2-Fluorophenol, Phenol-d5, and Terphenyl-d14. The samples are outside of the 2X holding window and thus will not be re-prepped and re-analyzed. B3BMN0 (160-23370-1), B3BMN7 (160-23370-2), B3BMP2 (160-23370-3), B3BMP7 (160-23370-4), B3BMR3 (160-23370-5), (LCS 160-318471/2-A), (MB 160-318471/1-A), (160-23370-B-1-B MS) and (160-23370-B-1-C MSD)

**ICP Metals****Batch: 321957**

The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 160-321216 and analytical batch 160-321957 were outside control limits for Aluminum. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits. (160-23370-A-9-B MS) and (160-23370-A-9-C MSD) This analyte has been qualified accordingly with an "N" flag in the associated samples.

**Batch: 322161**

The following samples were diluted to bring the concentration of target analytes within the calibration range: B3BMN1 (160-23370-9), (160-23370-A-9-B MS ^) and (160-23370-A-9-A SD ^). Elevated reporting limits (RLs) are provided. These analytes have been qualified accordingly with a "D" flag in the associated samples.

Due to the high concentration of Silicon, the matrix spike / matrix spike duplicate (MS/MSD) for preparation batch 160-321216 and analytical batch 160-322161 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria. (160-23370-A-9-B MS ^) and (160-23370-A-9-C MSD)

**Batch: 322135**

The following sample was diluted to bring the concentration of target analytes within the calibration range: B3BMR4 (160-23370-7). Elevated reporting limits (RLs) are provided. These analytes have been qualified accordingly with a "D" flag in the associated samples.

**ICPMS Metals****Batch: 321571**

The serial dilution performed for the following samples associated with batch preparation batch 160-321254 and analytical batch 160-321571 was outside control limits for Nickel which indicates potential matrix interference. (160-23370-A-1-D SD)

Due to the high concentration of Aluminum, the matrix spike / matrix spike duplicate (MS/MSD) for preparation batch 160-321254 and analytical batch 160-321571 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria (160-23370-A-1-E MS) and (160-23370-A-1-F MSD)

Due to a sequence error a CCVL, CCV, CCB occurred between the ICSA and the ICSAB instead of after the ICSAB. All recoveries were within established limits. B3BMN0 (160-23370-1), B3BMN7 (160-23370-2), B3BMP2 (160-23370-3), B3BMP7 (160-23370-4), B3BMR3 (160-23370-5), (CCB 160-321571/14), (CCB 160-321571/27), (CCB 160-321571/40), (CCV 160-321571/13), (CCV 160-321571/26), (CCV 160-321571/39), (CCVL 160-321571/12), (CCVL 160-321571/25), (CCVL 160-321571/38), (CRI 160-321571/10), (IC 160-321571/5), (IC 160-321571/6), (IC 160-321571/7), (ICB 160-321571/9), (ICSA 160-321571/11), (ICSAB 160-321571/15), (ICV 160-321571/8), (LCS

**Case Narrative**

Client: CH2M Hill Plateau Remediation Company  
 Project/Site: F17-009

TestAmerica Job ID: 160-23370-1  
 SDG: SL2590

**Job ID: 160-23370-1 (Continued)****Laboratory: TestAmerica St. Louis (Continued)**

160-321254/2-A), (LCSSRM 160-321254/3-), (LRC 160-321571/1), (LRC 160-321571/2), (LRC 160-321571/3), (MB 160-321254/1-A), (160-23370-A-1-E MS), (160-23370-A-1-F MSD) and (160-23370-A-1-D SD)

**Batch: 321728**

The following samples were diluted due to the nature of the sample matrix. Samples are high in salts which can cause instrument and QC failures when ran at a lesser dilution: B3BMN0 (160-23370-1), B3BMN7 (160-23370-2), B3BMP2 (160-23370-3), B3BMP7 (160-23370-4), B3BMR3 (160-23370-5), (160-23370-A-1-H MS), (160-23370-A-1-I MSD) and (160-23370-A-1-G SD). Elevated reporting limits (RLs) are provided. This analyte has been qualified accordingly with a "D" flag in the associated samples.

**Mercury****Batch: 318984**

The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for preparation batch 160-318875 and analytical batch 160-318984 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits. This result was verified using the same standards and samples in a new calibration with similar results. Original results are reported. This analyte has been qualified accordingly with an "N" flag in the associated samples.

**Ammonia as N****Batch: 321814**

The following matrix spike (MS) recoveries for Ammonia preparation batch 160-321695 and analytical batch 160-321814 were outside control limits: (160-23370-C-1-F MS). Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits. This analyte has been qualified accordingly with an "N" flag in the associated samples.

**Conductivity****Batch: 320264**

Specific Conductance was detected in method blank MB 160-320264/2 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "B". If the associated sample reported a result above the MDL and/or RL and if the method blank is greater than 5% the sample concentration, the result has been flagged "C".

**TOC****Batch: 321358**

The following samples in TOC batch 160-321358 were analyzed without a duplicate (DU) or a matrix spike (MS) in the batch in order to limit the number of reps performed on these samples (and thereby protect the instrument), due to these leachates containing some suspended solids that would not settle: B3BMR4 (160-23370-7) and B3BMN1 (160-23370-9) To demonstrate acceptable duplication in the batch, a laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) were analyzed and both recovered within acceptance limits.

The following samples in TOC batch 160-321358 were analyzed at dilution to start, based on suspected high concentrations of the target analyte and to limit the volume of sample analyzed, due to suspended solids in the leachates: B3BMR4 (160-23370-7) and B3BMN1 (160-23370-9) All sample results are above the adjusted reporting limit (RL) at dilution. This analyte has been qualified accordingly with a "D" flag in the associated samples.

**Batch: 321701**

The RPD value for TOC batch 321701 is outside established QC limits. RPD determinations are not applicable to values near the reporting limit; therefore, the data has been reported.

## FedEx® Tracking

**779661019271**

Ship date:

Mon 7/17/2017

Actual delivery:

Tue 7/18/2017 9:01 am

RICHLAND, WA US

**Delivered***Signed for by: B.DANIELS*

EARTH CITY, MO US

### Travel History

Date/Time	Activity	Location
■ 7/18/2017 - Tuesday		
9:01 am	Delivered	EARTH CITY, MO
7:22 am	On FedEx vehicle for delivery	EARTH CITY, MO
7:14 am	At local FedEx facility	EARTH CITY, MO
5:41 am	At destination sort facility	BERKELEY, MO
4:53 am	Departed FedEx location	MEMPHIS, TN
12:16 am	Arrived at FedEx location	MEMPHIS, TN
■ 7/17/2017 - Monday		
4:59 pm	Left FedEx origin facility	PASCO, WA
3:16 pm	Picked up	PASCO, WA
11:25 am	Shipment information sent to FedEx	

### Shipment Facts

Tracking number	779661019271	Service	FedEx Standard Overnight

**Definitions/Glossary**

Client: CH2M Hill Plateau Remediation Company  
 Project/Site: F17-009

TestAmerica Job ID: 160-23370-1  
 SDG: SL2590

**Qualifiers****GC/MS Semi VOA**

<b>Qualifier</b>	<b>Qualifier Description</b>
o	LCS, LCSD: Recovery exceeds upper or lower control limits.
U	Analyzed for but not detected.
X	See case narrative notes for explanation of the 'X' flag

**GC Semi VOA**

<b>Qualifier</b>	<b>Qualifier Description</b>
U	Analyzed for but not detected.

**Metals**

<b>Qualifier</b>	<b>Qualifier Description</b>
N	Recovery exceeds upper or lower control limits
U	Analyzed for but not detected.
D	The reported value is from a dilution.
X	See case narrative notes for explanation of the 'X' flag
y	Duplicate analysis not within control limits.
B	Estimated result. Result is less than the RL, but greater than MDL

**General Chemistry**

<b>Qualifier</b>	<b>Qualifier Description</b>
U	Analyzed for but not detected.
N	MS, MSD: Spike recovery is outside acceptance limits.
B	Estimated result. Result is less than the RL, but greater than MDL
y	Duplicate analysis not within control limits.
D	The reported value is from a dilution.

**Glossary****Abbreviation** **These commonly used abbreviations may or may not be present in this report.**

□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

**Method Summary**

Client: CH2M Hill Plateau Remediation Company  
 Project/Site: F17-009
