Waste Site Reclassification Form

Date Submitted: 6/2/2004	Operable Unit(s): 200-UR-1	Control Number: 2004-068
Originator: C. R. Webb	Waste Site ID: 200-W-73	
Phone: 373-5573	Type of Reclassification Action:	
	Rejected: <input type="radio"/>	
	No Action: <input checked="" type="radio"/>	
	Interim Closed Out: <input type="radio"/>	
	Closed Out: <input type="radio"/>	

This form documents agreement among the parties listed below authorizing classification of the subject unit as rejected, closed-out, or no action and authorizing backfill of the site, if appropriate. Final removal from the NPL of no action or closed-out sites will occur at a future date.

Description of current waste site condition:

In April 2000, contaminated material was identified partly inside and partly outside of a previously posted Contamination Area. The posted area appeared to be very old and abandoned. The site consisted of contaminated wood and metal debris. The maximum direct contamination found on the metal was 12,000 disintegrations per minute. The area was properly reposted and logged into the Contamination Area logbook.

Basis for reclassification:

The site is recommended for reclassification to No Action. The contaminated material was removed in June 2000. The metal that exhibited no detectable radiological contamination was recycled. Contaminated iron and scrap wood was processed as Low-level Waste (LLW). After the debris was removed the area was radiologically surveyed. No contamination was identified in the soil or vegetation. Six inches of gravel was spread over the area and the posting was changed from Contamination Area to Underground Radioactive Material.
