

Waste Site Reclassification Form

Date Submitted: 05/05/2008	Operable Units: 200-MG-1	Control Number: 2008-032
Originator: J Hulstrom	Waste Site ID: UPR-200-W-69	
Phone:	Type of Reclassification Action:	
	Closed Out: <input type="checkbox"/> Interim Closed Out: <input type="checkbox"/>	
	No Action: <input type="checkbox"/> RCRA Postclosure: <input type="checkbox"/>	
	Rejected: <input checked="" type="checkbox"/> Consolidated: <input type="checkbox"/>	

This form documents agreement among parties listed authorizing classification of the subject unit as Closed Out, Interim Closed Out, No Action, RCRA Postclosure, Rejected, or Consolidated. This form also authorizes backfill of the waste management unit, if appropriate, for Closed Out and Interim Closed out units. Final removal from the NPL of No Action and Closed Out waste management units will occur at a future date.

Description of Current Waste Site Conditions:

(Summarize status of investigation/remediation of the waste sites.)

A Radiation Occurrence report was issued on March 2, 1973 that documented loss of control of contamination from a radiation zone at 204-S. A radiation survey starting at the 204-S Unloading Station led to the discovery of a beta-gamma contamination spread north and northeast of the unloading station. Contamination was identified between the 204-S Unloading Station and the REDOX railroad cut embankment. Numerous spots of ground contamination of 2,000 to 50,000 counts per minute were noted with infrequent spots of 20 to 100 millirads/hour. The suspected cause of the ground contamination was high winds spreading material from a contaminated drain pit near the 204-S unloading station.

Basis for Reclassification:

(For closeout, reference supporting documentation, as listed in Table 3.)

The Radiation Monitoring Monthly Activity Report for November 1974 states that an area of spotty radioactive contamination, located north of 203-S and east of 204-S tanker unloading station, was bladed into windrows in November 1974. The contaminated soil was taken to a 200 West Area burial ground. The site was then released from Radiation Zone status. It is recommended this Unplanned Release be Reclassified to Rejected, based on the contaminated soil removal that occurred in 1974.

Waste Site Controls

Engineered Controls: Yes No Institutional Controls: Yes No O&M requirements: Yes No

If any of the Waste Site Controls are checked Yes specify control requirements including reference to the Record of Decision, TSD Closure Letter, or other relevant documents.
