3. **Comment:**

The waste site is an underground, 10 centimeter (4 inch) diameter carbon steel pipeline. It transferred turbine fan steam condensate and 291-Z floor drainage the 291-Z building to the 216-Z-14 french drain.

In July 2017, the 291-Z Stack was demolished. No other effluent stream is associated with this pipeline.

4. **Is the site a Solid Waste Management Unit?**

Any discernible location at the Facility where solid wastes have been placed at any time, irrespective of whether the location was intended for the management of solid or dangerous waste, and includes any area at the Facility at which solid wastes have been routinely and systematically released (for example through spills), and includes dangerous waste treatment, storage, and disposal units.

5. **Does the site need to be addressed under a regulatory program? Check first item that applies.**
