Subject: 100 Area PAS Contaminant Group

Jamie

I have read through, line by line, page by page, table by table, map by map
and taken about 10 pages of notes on the following documents #

DOE/RL-94- 139

DOE/RL -94-138

DOE/RL-93-47

DOE/RL 94-44

I have started making a table using the exact format of the 1100 area PAS table 3, Summary of Hazardous Substances Released (entering Maximum Numbers into table not ranges). I can't put in cleanup numbers as I can't find them and most of the sites remain in a not investigated category. I still need to read the Riverland and McGee Ranch information that we have. My question is this, is there any other final documentation for cleanup of landfills on North Slope other than the information contained in 94-139. DOE 94- 44 doesn't have any useful information in it as regards actual cleanup. I can't find any summary or compendium final documents of the field notes, records of sampling during excavation of the 4 land fills and analytical records and cleanup levels. All of the other sites on the north slope that had identified anomalies during phase two are not documented as to final disposition. I hope there is more data available for this PAS. Let me know what you find out.

Tom
