Dear J.A. Lerch

Thank you for purchasing analytical testing services from IT Corporation. It is our intention to supply our clients with data packages which not only meet the industry's highest standards for quality, but are also easy to use. Features which we point out are:

- 1. A Data Summary Packet which allows you to review your data without searching through the complete data package.

Your Data Summary Packet contains the following items:

- Case Narrative: listing of sample identifications, analyses performed, explanation of any problem associated with samples, corrective action taken.
- Quality control sample identifications and analyses performed.
- Data summary.

- 2. A data package which meets the specific requirements you requested and is easy to use as well. The package is organized in accordance with the Table of Contents which you will find at the beginning of each section. Sections are separated by color-coded tabs, making it easy to find individual analytical parameters which may be of particular interest to you. The data package is custody-sealed at the laboratory - your assurance that parts of the package are not missing.

We are constantly searching for ways to improve our service to you. This current product has many of the features which you have told us are important to you. Your suggestions regarding additional improvements will be appreciated.

Please contact me with any questions or suggestions.

Sincerely,

*Sheree Schneider /sp*

## CERTIFICATE OF ANALYSIS

IT Corporation  
2800 George Washington Way  
Richland, WA 99352  
Attn: Van Pettey

May 26, 1994

Job Number: 351; 379; 381; 382

This is the Certificate of Analysis for the following samples:

SDG:	W0027
Client Project ID:	Westinghouse Hanford
Date Received by Lab:	April 13, 1994; April 15, 1994, April 16, 1994
Number of Samples:	Twenty (20)
Sample Type:	Water

### I. Introduction

On April 13, April 15, April 16, 1994, twenty (20) water samples arrived at ITAS-Richland, Washington and were transferred to ITAS-Knoxville for chemical analysis. The list of analytical tests performed, as well as date of receipt and analysis, can be found in the attached report.

### II. Analytical Results/Methodology

The analytical results for this report are presented by analytical test. Each set of data will include sample identification information and the analytical results.

The samples were analyzed for Target Analyte List (TAL) metals by cold vapor atomic absorption spectroscopy (CVAA), graphite furnace atomic absorption spectroscopy (GFAA), and inductively coupled plasma spectroscopy (ICP) in accordance with the EPA CLP ILM03 Statement of Work.

## II. Analytical Results/Methodology (Continued)

The samples were analyzed for total cyanide in accordance with the EPA CLP ILM03 Statement of Work.

The samples were analyzed for anions by ion chromatography using EPA method 300.0.

The alkalinity of the samples was determined using EPA method 310.1.

The samples were analyzed for nitrate-nitrite based on EPA method 353.2.

The samples were analyzed for sulfate based on EPA method 375.4.

The total dissolved solids (TDS) content of the samples was determined using EPA method 160.1.

## III. Quality Control

The samples for work order #351 were digested on May 3, 1994 for ICP and GFAA. The GFAA analyses for selenium and bismuth were performed from May 5 through May 14, 1994; the remaining metals were analyzed by ICP on May 4, 1994. All run QC was acceptable. Linear range for silicon was determined on May 24, 1994.

The samples for work order #379 were digested on May 3, 1994 for ICP and GFAA. The GFAA analyses for selenium and bismuth were performed from May 5 through May 14, 1994; the remaining metals were analyzed by ICP on May 5 and May 6, 1994. All run QC was acceptable. A duplicate/spike pair was prepared using sample numbers BOBNJ5 and BOBNJ6. Spike recovery (accuracy) results were within acceptance limits for all requested parameters. Duplicate RPD (precision) results were within acceptance limits for all requested parameters. Blank spikes were performed for cyanide, due to insufficient sample volume.

The samples for work order #381 were digested on May 4, 1994 for ICP and GFAA. The GFAA analyses for selenium and bismuth were performed from May 9 through May 16, 1994; the remaining metals were analyzed by ICP from May 5 through May 19, 1994. All run QC was acceptable. A duplicate/spike pair was prepared using sample numbers BOBNM1 and BOBNM2. Spike recovery (accuracy) results were within acceptance limits for all requested parameters for both samples. As the silicon concentration was greater than four times (4X) the spike added, spiking criteria did not apply for this analyte. Duplicate RPD (precision) results were within acceptance limits for all requested parameters for both samples except for iron on sample BOBNM1. Poor precision for iron appears to be attributable to contamination during the sample digestion procedure.

### III. Quality Control (Continued)

The samples for work order # 382 were digested on May 3, 1994 for ICP and GFAA. The GFAA analyses for selenium and bismuth were performed from May 6 through May 16, 1994; the remaining metals were analyzed by ICP on May 6, 1994. All run QC was acceptable.

Data were reported with qualifiers as follows:

#### "C" Qualifiers

- U - Compound was analyzed for but not detected. The number is the detection limit for the sample.
- B - Value greater than instrument detection limit, but less than contract required quantitation limit.

#### "Q" Qualifiers

- \* - Duplicate analysis outside control limits.
- N - Spiked sample recovery outside control limits.
- W - Post-digestion spike for GFAA was out of control limits (85-115%), while sample absorbance was less than 50% of spike absorbance.
- S - The reported value was determined by method of standard additions.

#### "M" Qualifiers

- P - Analysis performed by ICP.
- V - Analysis performed by CVAA.
- F - Analysis performed by GFAA.
- C - Cyanide analysis by manual distillation/colorimetric determination.

#### Miscellaneous

- D - Duplicate.
- S - Spike.
- NR - Not required.
- G - Native analyte > 4 times spike added, therefore, acceptance criteria do not apply.
- X - Detection limits higher than normal due to sample matrix interferences.

Matrix spike/matrix spike duplicate analyses for anions, nitrate/nitrite and sulfate were performed on samples BOBNJ5 and BOBNM1 with acceptable results.

A duplicate analysis was performed for alkalinity on sample BOBNJ5 with acceptable results.

A duplicate analysis was performed for total dissolved solids on sample BOBNL7 with acceptable results.

### I. Introduction

On April 12, 14, and 15, 1994, ten water samples were received by ITAS-Richland for radiochemical analysis. Upon receipt, the samples were assigned the following laboratory ID numbers to correspond with the WHC specific IDs:

<u>ITAS-Richland ID</u>	<u>WHC ID</u>	<u>Matrix</u>	<u>Date of Receipt</u>
404199-01A	BOBNM1	Water	4/12/94

## II. Analytical Results/Methodology

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information, analytical results and the appropriate associated statistical errors.

The requested analyses were:

### **Alpha Spectroscopy**

Plutonium-238, -239/40 by method ITAS-RD-3209

### **Gamma Spectroscopy**

Gamma Scan by method ITAS-RD-3219

### **Gas Proportional Counting**

Gross Alpha by method ITAS-RD-3222

Gross Beta by method ITAS-RD-3222

Strontium-90 by method ITAS-RD-3204

### **Liquid Scintillation Counting**

Technetium-99 by method ITAS-IT-RS-0001

Tritium by method ITAS-RD-3205

### **Total Uranium**

Total Uranium by method ITAS-RD-4200

## III. Quality Control

The analytical results for each analysis performed under SDG W0027 include a minimum of one Laboratory Control Sample (LCS), one method (reagent) blank, and one duplicate. Any exceptions have been noted in the "Comments" section.

Quality control sample results are reported in the same units as sample results.

## IV. Comments

The initial radioactivity screening of the samples classified them as Category I, with the exceptions of samples BOBNM1 and BOBNL3 which were classified as Category III. A review of the screening data revealed that the samples initially identified as Category III were in fact Category I samples, therefore they were batched with the other Category I samples.

### **Alpha Spectroscopy**

#### Plutonium-238, -239/40 by method ITAS-RD-3209

The LCS, batch blank, sample and sample duplicate (duplicate of sample B0BNL7) results are within contractual requirements. Sample B0BNP1 from SDG W0038 was inadvertently batched with this SDG for this analysis. That sample will be reported with SDG W0038.

### **Gamma Spectroscopy**

#### Gamma Scan by method ITAS-RD-3219

The LCS, batch blank, sample and sample duplicate (duplicate of sample B0BNL3) results are within contractual requirements. Sample B0BNP1 from SDG W0038 was inadvertently batched with this SDG for this analysis. That sample will be reported with SDG W0038.

### **Gas Proportional Counting**

#### Gross Alpha by method ITAS-RD-3222

The LCS, batch blank, sample and sample duplicate (duplicates of samples B0BNL7 and B0BNP1) results are within contractual requirements. Sample B0BNP1 from SDG W0038 was inadvertently batched with this SDG for this analysis. That sample will be reported with SDG W0038.

#### Gross Beta by method ITAS-RD-3222

The LCS, batch blank, sample and sample duplicate (duplicates of samples B0BNL7 and B0BNP1) results are within contractual requirements. Sample B0BNP1 from SDG W0038 was inadvertently batched with this SDG for this analysis. That sample will be reported with SDG W0038.

#### Strontium-90 by method ITAS-RD-3204

The LCS, batch blank, sample and sample duplicate (duplicate of sample B0BNL3) results are within contractual requirements.

Westinghouse Hanford Company  
June 3, 1994  
Page 4

---

### **Liquid Scintillation Counting**

#### Technetium-99 by method ITAS-IT-RS-0001

Three matrix spikes were analyzed with the batch. The sample results were not yield corrected by the average matrix spike chemical yield. The LCS, matrix spike, batch blank, sample and sample duplicate (duplicate of sample BOBNM1) results are within contractual requirements. The result for the duplicate of sample BOBNK3 was just outside of the 3 sigma control limit. The duplicate difference is attributed to sediment in the sample and the batch is accepted and reported based on two acceptable LCS results, two acceptable batch blank results, four acceptable instrument blank results, three acceptable matrix spike results and one acceptable duplicate result.

#### Tritium by method ITAS-RD-3205

The LCS, batch blank, sample and sample duplicate (duplicate of sample BOBNM1) results are within contractual requirements.

### **Total Uranium**

#### Total Uranium by method ITAS-RD-4200

Two matrix spikes were analyzed with the batch. Neither spike produced useable data due the high activity (matrix effect) present in the sample. The samples were spiked with .09  $\mu\text{g}$  of natural uranium and the activity for each of the samples measured 4.3  $\mu\text{g/L}$  and 5.5  $\mu\text{g/L}$ . No matrix spike yield correction was performed. The LCS, batch blank, sample and sample duplicate (duplicates of samples BOBNL7 and BOBNJ5) results are within contractual requirements. Sample BOBNP1 from SDG W0038 was inadvertently batched with this SDG for this analysis. That sample will be reported with SDG W0038.

Dear Karl,

Attached is the data validation report for analytical results for 200-BP-5 Groundwater Operable Unit (SDG W0027-ITC-036). The package was received by Los Alamos Technical Associates on July 20, 1994. Validation of this package began on July 28, and was completed on August 15, 1994.

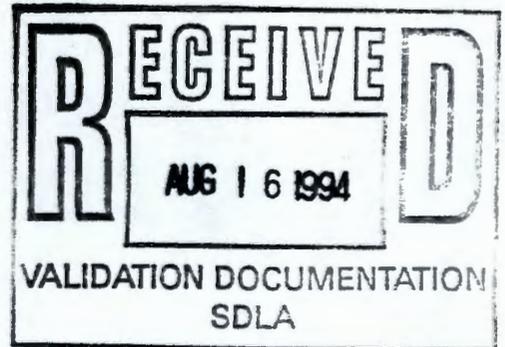

If you have any questions, please let me know.

Sincerely,

A handwritten signature in cursive script that reads "Donald J. Smith".

**200-BP-5 Groundwater Operable Unit  
Data Validation Narrative**

**INTRODUCTION**

All samples in Sample Delivery Group (SDG) W0027-ITC-036 were validated at level "D" as defined in the Data Validation Procedures for Chemical Analysis (WHC-SD-EN-SPP-002) and Data Validation Procedures for Radiochemical Analyses (WHC-SD-EN-SPP-001).

The data package was received by Los Alamos Technical Associates (LATA) on July 15, 1994. Validation began on July 20, 1994 and was completed on August 15, 1994.

The chemical and radiochemical analyses were performed by International Technology Corporation, ITAS.

**ANALYSES REQUESTED**

Twenty (20) water samples numbered B0BNH9, B0BNJ0, B0BNJ1, B0BNJ2, B0BNJ5, B0BNJ6, B0BNJ7, B0BNJ8, B0BNK3, B0BNK4, B0BNK5, B0BNK6, B0BNL3, B0BNL4, B0BNL7, B0BNL8, B0BNM1, B0BNM2, B0BNN7, and B0BNN8 were collected on April 11, 12, 13, 14 1994 by WHC and transferred to International Technology Corporation (ITC) for analysis.

A subset of the SDG included ten (10) water samples B0BNH9, B0BNJ1, B0BNJ5, B0BNJ7, B0BNK3, B0BNK5, B0BNL3, B0BNL7, B0BNM1 and B0BNN7. The following determinations were conducted:

Metals:	ICP	Method CLP
	Selenium	Method CLP
Total Cyanide		Method CLP
Sulfate		Method 375.4
Total Dissolved Solids		Method 160.1
Alkalinity		Method 310.1
Nitrate+Nitrite		Method 353.2
Anions (F, Cl, SO <sub>4</sub> , NO <sub>2</sub> , PO <sub>4</sub> )		Method 300.0
Tritium		Method ITAS-RD-3205
Gross Alpha/Beta		Method ITAS-RD-3222
Plutonium 238, 239/240		Methods ITAS-RD-3209
Strontium 89/90		Method ITAS-RD-3204
Total Uranium		Method ITAS-RD-4200
Gamma Spectrometry		Methods ITAS-RD-3219

**ANALYSES REQUESTED (CONT.)**

A second subset of the SDG included ten (10) water samples BOBNJ0, BOBNJ2, BOBNJ6, BOBNJ8, BOBNK4, BOBNK6, BOBNL4, BOBNL8, BOBNM2, and BOBNN8.

Metals:	ICP	Method CLP Filtered
	Selenium	Method CLP Filtered

**DATA QUALITY OBJECTIVES**

The data quality objectives for 200-BP-5 Groundwater Operable Unit are specified in the *Quality Assurance Program Plan for the 200-BP-5 Groundwater Operable Unit* (DOE/RL 88-32, Rev. 1). Precision, accuracy, and detection limit requirements for the project have been derived from *USEPA Contract Laboratory Program Statement of Work for Inorganic Analyses* (EPA 1989a).

The primary objective of the data validation effort was to ensure these data quality objectives were met, and that the data are usable and defensible. This was accomplished through a detailed examination of the data package to recreate the analytical process and verify that proper and acceptable analytical techniques had been applied. The data package was checked for correct submission of required deliverables, correct transcription of raw data to the summary forms, and for proper calculation of a number of parameters. Data qualifiers are assigned to any results that have been determined to be deficient. These are discussed below.

<b>Precision.</b>	Goals for precision were met with the exception of those items discussed under " <b>Minor Deficiencies</b> ".
<b>Accuracy.</b>	Goals for accuracy were met with the exception of those items discussed under " <b>Minor Deficiencies</b> ".
<b>Sample Result Verification.</b>	All sample results were supported in the raw data.
<b>Detection Limits.</b>	Detection limit goals were met for all requested analyses.
<b>Completeness.</b>	The data package was 95% complete for the requested analyses.

**MAJOR DEFICIENCIES (REJECTED DATA)**

The following major deficiencies were identified during validation which required qualification of data as unusable.

1. The analyses for nitrite by IC and phosphate by IC exceeded the maximum hold time by greater than two times the limit. All undetected sample results were qualified as unusable (UR).

**MINOR DEFICIENCIES**

The following minor deficiencies were discovered. These minor shortcomings are not expected to significantly affect the overall quality of the data.

1. The iron results for samples BOBNM1, BOBNM2, BOBNL3, and BOBNL4 were qualified as estimated (J/BJ) because the duplicate precision was outside acceptance criteria.
2. The iron results for samples BOBNL8, BOBNH9, BOBNJ0, BOBNJ1, BOBNJ2, BOBNJ5, BOBNJ6, BOBNJ7, BOBNJ8, BOBNK3, BOBNK4, BOBNK6, BOBNN7, and BOBNN8 were qualified as undetected (U). Iron was detected in the preparation blank and sample results were not greater than five times the blank result.
3. The manganese results for samples BOBNL7, BOBNK3, BOBNK4, and BOBNJ8 were qualified as undetected (U) because sample results were not greater than five times the blank values.
4. The technetium results for BOBNM1, BOBNL3, BOBNL7, BOBNJ5, BOBNJ7, BOBNK3, BOBNN7, BOBNJ1, and BOBNH9 were qualified as estimated because the duplicate precision was outside of acceptance criteria.
5. The holding time was exceeded by less than two times the limit for alkalinity. The results were qualified as estimate (J) for samples BOBNL7, BOBNM1, and BOBNL3.
6. The holding time was exceeded by less than two times the limit for total dissolved solids. The results were qualified as estimated (J) for samples BOBNM1, BOBNL3, and BOBNH9.
7. The holding time was exceeded by greater than two times the limit for phosphate. The detected sample results were qualified as estimated (J).
8. The analytical spike recovery for selenium was < 85% in BOBNN8. The results are qualified as estimated (UJ).

**COMMENTS**

1. The uranium results were reported in pCi/L instead of the correct units of  $\mu\text{g/L}$ . The correct units were added to the Form Is.
2. The total uranium RPD had transcription errors. All total uranium results were checked for transcription errors.
3. The metals analysis was not performed on BOBNK5 because the container was received broken or leaking. See the attached laboratory Variance Report.

**DATA VALIDATION APPLIED QUALIFIERS**

Qualifiers which may be applied by data validators in compliance with the procedures herein are as follows.

- U- Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.
- UJ- Indicates the compound or analyte was analyzed for and not detected in the sample. Due to a QC deficiency identified during data validation, the associated quantitation limit is an estimate.
- J- Indicates the compound or analyte was analyzed for and detected. The associated concentration is an estimate, but the data are usable for decision making purposes.
- BJ- Applied to inorganic analyses only. Indicates the analyte concentration was greater than the IDL but less than the CRDL and is considered an estimated value.
- R- Indicates the compound or analyte was analyzed for, detected, and due to an identified QC deficiency the data are unusable.
- UR- Indicates the compound or analyte was analyzed for and not detected in the sample. Additionally, the data are unusable due to an identified QC deficiency.
- JN- Indicates a tentatively identified compound (TIC) that has been determined to be valid in terms of identification and quantitation.
- UJN- Indicates a tentatively identified compound (TIC) that has been determined to be presumptive and valid (JN) in terms of identification and quantitation and has been qualified as undetected (U) due to associated blank contamination.
- NJ- Indicates presumptive evidence of a compound at an estimated value. The data may not be valid for some specific application (i.e., usable for decision making purposes).
- N- Indicates presumptive evidence of a compound. The data may not be valid for some specific applications (i.e., usable for decision making purposes).

**LABORATORY APPLIED QUALIFIERS**

Qualifiers which may be applied by the laboratory in compliance with applicable requirements are as follows.

**Organic Data Qualifiers**

- U- Indicates the compound or analyte was analyzed for and not detected in the sample. The value reported is the sample quantitation limit corrected for sample dilution and moisture content by the laboratory.
- J- Indicates an estimated value. This flag is used when estimating concentrations of tentatively identified compounds (TICs) or when the presence of a TCL compound is confirmed at a concentration of less than the CRQL but greater than the IDL.
- N- Indicates presumptive evidence of a compound. This flag is used only by the laboratory for TIC results when the identification is based on a mass spectral library search.
- P- This flag is used for pesticide/Aroclor target analytes when there is greater than 25% difference for detected values between the quantitation and confirmation GC columns. The lower of the two concentrations is reported on the report form and the result is flagged with a "P".
- C- This flag applies to pesticide results where the identification has been confirmed by GC/MS. This flag should not be used by the laboratory if GC/MS confirmation was attempted but unsuccessful, in which case, the laboratory should use an "X" flag as defined below. The "X" flag is then defined in the SDG narrative.
- B- This flag applies to results in which the analyte was detected in both the sample and the associated blank. The combination of the "B" flag with the "U" flag ("BU" or "UB") is expressly prohibited in the analytical SOW.
- E- This flag identifies compounds whose concentrations exceed the calibrated range of the GC/MS instrument.
- D- This flag identifies compounds identified in an analysis at a secondary dilution factor.
- A- Indicates a TIC which is a suspected aldol-condensate product.
- X- This is a non-specific flag used to properly define the results. If used, this flag must be properly defined within the body of the SDG.

**LABORATORY APPLIED QUALIFIERS****Inorganic Qualifiers**

- U- Indicates the analyte was analyzed for but not detected in the sample.
- B- Indicates the analyte concentration is less than the CRDL but greater than the IDL.
- E- Indicates the value reported is estimated due to the presence of interference.
- M- Indicates duplicate injection precision criteria were not met during graphite furnace (GFAA) analysis.
- N- Indicates spiked sample recovery was not within the control limits.
- S- Indicates the reported value was determined by the Method of Standard Additions (MSA).
- W- Indicates post-digestion spike for GFAA analysis is outside control limits and the sample absorbance is less than 50% of the spike absorbance.
- \*- Indicates duplicate analysis was not within control limits.
- + - Indicates the correlation coefficient (r) for the MSA was less than 0.995.

CONCS = concentration off calibration curve (mg/L)

DFS = dilution factor (if any)

VOL = volume of final extract (ml)

WS = weight of sample (g)

SS = dry weight conversion factor [(100 - %moisture) × 100]

Do results meet the CRDLs? ..... (Yes) No N/A

## LATA RADIOCHEMISTRY DATA VALIDATION CHECKLIST

## VALIDATION SUMMARY

## MAJOR DEFICIENCIES:

None

## MINOR DEFICIENCIES:

1. TC99 results were qualified as indicated (T105) because the duplicate precision was outside acceptance criteria.

## COMMENTS:

1. MDA for Tritium had to be calculated
2. MDAs were not reported on the Form 2s
3. Uranium results reported in pCi/l instead of mg/l
4. The RPD for U-total had a date entry error.

Because of the above items, this package took longer to validate.

### I. Introduction

On April 12, 14, and 15, 1994, ten water samples were received by ITAS-Richland for radiochemical analysis. Upon receipt, the samples were assigned the following laboratory ID numbers to correspond with the WHC specific IDs:

<u>ITAS-Richland ID</u>	<u>WHC ID</u>	<u>Matrix</u>	<u>Date of Receipt</u>
404199-01A	B0BNM1	Water	4/12/94

## II. Analytical Results/Methodology

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information, analytical results and the appropriate associated statistical errors.

The requested analyses were:

**Alpha Spectroscopy**

Plutonium-238, -239/40 by method ITAS-RD-3209

**Gamma Spectroscopy**

Gamma Scan by method ITAS-RD-3219

**Gas Proportional Counting**

Gross Alpha by method ITAS-RD-3222

Gross Beta by method ITAS-RD-3222

Strontium-90 by method ITAS-RD-3204

**Liquid Scintillation Counting**

Technetium-99 by method ITAS-IT-RS-0001

Tritium by method ITAS-RD-3205

**Total Uranium**

Total Uranium by method ITAS-RD-4200

## III. Quality Control

The analytical results for each analysis performed under SDG W0027 include a minimum of one Laboratory Control Sample (LCS), one method (reagent) blank, and one duplicate. Any exceptions have been noted in the "Comments" section.

Quality control sample results are reported in the same units as sample results.

## IV. Comments

The initial radioactivity screening of the samples classified them as Category I, with the exceptions of samples B0BNM1 and B0BNL3 which were classified as Category III. A review of the screening data revealed that the samples initially identified as Category III were in fact Category I samples, therefore they were batched with the other Category I samples.

### Alpha Spectroscopy

#### Plutonium-238, -239/40 by method ITAS-RD-3209

The LCS, batch blank, sample and sample duplicate (duplicate of sample B0BNL7) results are within contractual requirements. Sample B0BNP1 from SDG W0038 was inadvertently batched with this SDG for this analysis. That sample will be reported with SDG W0038.

### Gamma Spectroscopy

#### Gamma Scan by method ITAS-RD-3219

The LCS, batch blank, sample and sample duplicate (duplicate of sample B0BNL3) results are within contractual requirements. Sample B0BNP1 from SDG W0038 was inadvertently batched with this SDG for this analysis. That sample will be reported with SDG W0038.

### Gas Proportional Counting

#### Gross Alpha by method ITAS-RD-3222

The LCS, batch blank, sample and sample duplicate (duplicates of samples B0BNL7 and B0BNP1) results are within contractual requirements. Sample B0BNP1 from SDG W0038 was inadvertently batched with this SDG for this analysis. That sample will be reported with SDG W0038.

#### Gross Beta by method ITAS-RD-3222

The LCS, batch blank, sample and sample duplicate (duplicates of samples B0BNL7 and B0BNP1) results are within contractual requirements. Sample B0BNP1 from SDG W0038 was inadvertently batched with this SDG for this analysis. That sample will be reported with SDG W0038.

#### Strontium-90 by method ITAS-RD-3204

The LCS, batch blank, sample and sample duplicate (duplicate of sample B0BNL3) results are within contractual requirements.

### Liquid Scintillation Counting

#### Technetium-99 by method ITAS-IT-RS-0001

Three matrix spikes were analyzed with the batch. The sample results were not yield corrected by the average matrix spike chemical yield. The LCS, matrix spike, batch blank, sample and sample duplicate (duplicate of sample B0BNM1) results are within contractual requirements. The result for the duplicate of sample B0BNK3 was just outside of the 3 sigma control limit. The duplicate difference is attributed to sediment in the sample and the batch is accepted and reported based on two acceptable LCS results, two acceptable batch blank results, four acceptable instrument blank results, three acceptable matrix spike results and one acceptable duplicate result.

#### Tritium by method ITAS-RD-3205

The LCS, batch blank, sample and sample duplicate (duplicate of sample B0BNM1) results are within contractual requirements.

### Total Uranium

#### Total Uranium by method ITAS-RD-4200

Two matrix spikes were analyzed with the batch. Neither spike produced useable data due to the high activity (matrix effect) present in the sample. The samples were spiked with .09  $\mu\text{g}$  of natural uranium and the activity for each of the samples measured 4.3  $\mu\text{g/L}$  and 5.5  $\mu\text{g/L}$ . No matrix spike yield correction was performed. The LCS, batch blank, sample and sample duplicate (duplicates of samples B0BNL7 and B0BNJ5) results are within contractual requirements. Sample B0BNP1 from SDG W0038 was inadvertently batched with this SDG for this analysis. That sample will be reported with SDG W0038.

Job Number: 351; 379; 381; 382

This is the Certificate of Analysis for the following samples:

SDG:	W0027
Client Project ID:	Westinghouse Hanford
Date Received by Lab:	April 13, 1994; April 15, 1994, April 16, 1994
Number of Samples:	Twenty (20)
Sample Type:	Water

---

### I. Introduction

On April 13, April 15, April 16, 1994, twenty (20) water samples arrived at ITAS-Richland, Washington and were transferred to ITAS-Knoxville for chemical analysis. The list of analytical tests performed, as well as date of receipt and analysis, can be found in the attached report.

### II. Analytical Results/Methodology

The analytical results for this report are presented by analytical test. Each set of data will include sample identification information and the analytical results.

The samples were analyzed for Target Analyte List (TAL) metals by cold vapor atomic absorption spectroscopy (CVAA), graphite furnace atomic absorption spectroscopy (GFAA), and inductively coupled plasma spectroscopy (ICP) in accordance with the EPA CLP ILM03 Statement of Work.

## II. Analytical Results/Methodology (Continued)

The samples were analyzed for total cyanide in accordance with the EPA CLP ILM03 Statement of Work.

The samples were analyzed for anions by ion chromatography using EPA method 300.0.

The alkalinity of the samples was determined using EPA method 310.1.

The samples were analyzed for nitrate-nitrite based on EPA method 353.2.

The samples were analyzed for sulfate based on EPA method 375.4.

The total dissolved solids (TDS) content of the samples was determined using EPA method 160.1.

## III. Quality Control

The samples for work order #351 were digested on May 3, 1994 for ICP and GFAA. The GFAA analyses for selenium and bismuth were performed from May 5 through May 14, 1994; the remaining metals were analyzed by ICP on May 4, 1994. All run QC was acceptable. Linear range for silicon was determined on May 24, 1994.

The samples for work order #379 were digested on May 3, 1994 for ICP and GFAA. The GFAA analyses for selenium and bismuth were performed from May 5 through May 14, 1994; the remaining metals were analyzed by ICP on May 5 and May 6, 1994. All run QC was acceptable. A duplicate/spike pair was prepared using sample numbers BOBNJ5 and BOBNJ6. Spike recovery (accuracy) results were within acceptance limits for all requested parameters. Duplicate RPD (precision) results were within acceptance limits for all requested parameters. Blank spikes were performed for cyanide, due to insufficient sample volume.

The samples for work order #381 were digested on May 4, 1994 for ICP and GFAA. The GFAA analyses for selenium and bismuth were performed from May 9 through May 16, 1994; the remaining metals were analyzed by ICP from May 5 through May 19, 1994. All run QC was acceptable. A duplicate/spike pair was prepared using sample numbers BOBNM1 and BOBNM2. Spike recovery (accuracy) results were within acceptance limits for all requested parameters for both samples. As the silicon concentration was greater than four times (4X) the spike added, spiking criteria did not apply for this analyte. Duplicate RPD (precision) results were within acceptance limits for all requested parameters for both samples except for iron on sample BOBNM1. Poor precision for iron appears to be attributable to contamination during the sample digestion procedure.

### III. Quality Control (Continued)

The samples for work order # 382 were digested on May 3, 1994 for ICP and GFAA. The GFAA analyses for selenium and bismuth were performed from May 6 through May 16, 1994; the remaining metals were analyzed by ICP on May 6, 1994. All run QC was acceptable.

Data were reported with qualifiers as follows:

#### "C" Qualifiers

- U - Compound was analyzed for but not detected. The number is the detection limit for the sample.
- B - Value greater than instrument detection limit, but less than contract required quantitation limit.

#### "O" Qualifiers

- \* - Duplicate analysis outside control limits.
- N - Spiked sample recovery outside control limits.
- W - Post-digestion spike for GFAA was out of control limits (85-115%), while sample absorbance was less than 50% of spike absorbance.
- S - The reported value was determined by method of standard additions.

#### "M" Qualifiers

- P - Analysis performed by ICP.
- V - Analysis performed by CVAA.
- F - Analysis performed by GFAA.
- C - Cyanide analysis by manual distillation/colorimetric determination.

#### Miscellaneous

- D - Duplicate.
- S - Spike.
- NR - Not required.
- G - Native analyte > 4 times spike added, therefore, acceptance criteria do not apply.
- X - Detection limits higher than normal due to sample matrix interferences.

Matrix spike/matrix spike duplicate analyses for anions, nitrate/nitrite and sulfate were performed on samples BOBNJ5 and BOBNM1 with acceptable results.

A duplicate analysis was performed for alkalinity on sample BOBNJ5 with acceptable results.

A duplicate analysis was performed for total dissolved solids on sample BOBNL7 with acceptable results.

Condition Upon Receipt Variance Report  
ITAS - Knoxville Laboratory/Middlebrook Facility

Location: ITAS - Richland  
Product No: Westinghouse Hanford  
Analysis Requested: Anions + Metals  
Sample Numbers Affected: W40425709B + W40425707A

Date: 4-15-94  
Initiated by: KAK  
RFA/COC Numbers: 340373

Condition/Variance (Check all that apply):

- Not enough sample received for proper analysis.  
Received approximately: \_\_\_\_\_
- Sample received broken/leaking.
- Sample received without proper preservative.
  - Cooler temperature not within 4°C ± 2°C  
Record temperature: \_\_\_\_\_
  - pH \_\_\_\_\_
  - other: \_\_\_\_\_
- Sample received in improper container.
- Sample received without proper paperwork. Explain: \_\_\_\_\_
- Paperwork received without sample.
- No sample ID on sample container.
- 8.  Custody tape disturbed/broken/missing.
- 9.  Sample splits performed by lab.
- 10.  Volatile sample received with approximately \_\_\_\_\_ mm headspace.
- 11.  Sample ID on container does not match sample ID on paperwork. Explain: \_\_\_\_\_
- 12.  All coolers on airbill not received with shipment.
- 13.  Other (explain below): \_\_\_\_\_
