3. Comment:

The waste site is the footprint of the demolished 233-S and 233-SA buildings, located north of 202-S. The building footprints were covered with concrete and two feet of gravel. They form a single, "L-Shaped" polygon. Contaminated soil, piping and ducting remain beneath the concrete and gravel cap. The footprint is located inside a locked, chain link fence. The chain link fence is posted with Underground Radioactive Material signs.

4. Is the site a Solid Waste Management Unit?

Any discernible location at the Facility where solid wastes have been placed at any time, irrespective of whether the location was intended for the management of solid or dangerous waste, and includes any area at the Facility at which solid wastes have been routinely and systematically released (for example through spills), and includes dangerous waste treatment, storage, and disposal units.

Yes
 No

5. Does the site need to be addressed under a regulatory program? Check first item that applies.
