Waste Site Reclassification Form

Date Submitted: 8/4/1998	Operable Unit(s): 300-FF-2	Control Number: 98-056
Originator: C. E. Corriveau, Jr., MSIN H0-17	Waste Site ID: 300-201	
Phone: 372-9565	Type of Reclassification Action: Rejected <input checked="" type="radio"/> Closed-Out <input type="radio"/> No Action <input type="radio"/>	

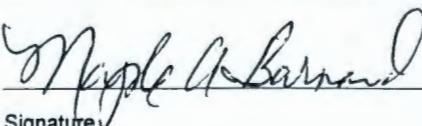

This form documents agreement among the parties listed below authorizing classification of the subject unit as rejected, closed-out, or no action and authorizing backfill of the site, if appropriate. Final removal from the NPL of no action or closed-out sites will occur at a future date.

Description of current waste site condition:

The site is a 1 meter (3 foot) diameter concrete pipe in the gravel roadway. A 5 centimeter (2 inch) steel pipe comes in at the bottom, from the direction of the 3762 Building. The bottom of the drain is 0.5 meters (1.5 feet) deep, and covered with small rocks and sand. The drain is protected by a yellow steel barrier made of pipes, which has been bent by traffic over the years. The drain is covered by a galvanized steel plate with 4 vent holes. The site is listed in the "Inventory of Miscellaneous Streams", Revision 3, as source #491.

Basis for reclassification:

The site is an inactive structure that received less than 0.038 liters (0.01 gallons) per minute steam condensate only. This site received steam condensate only. Steam was produced from sanitary water that had been sent through a water softener system to remove minerals (calcium and magnesium). The treated water was introduced into boilers to produce steam. This steam was superheated before distribution to facilities for heating and process use. Disposal sites received steam condensate from the steam distribution lines. When used for heating purposes, this was a seasonal discharge. Non-regulated chemicals were added to dechlorinate the water, prevent scale, and control corrosion.
