Description of Change

Modify the text to make the use of surface casing, its diameter, depth, optional based on the site specific drilling conditions and data needs. The field team leader shall make the decisions including the site data up to the time of drilling including the site specific safety plan, radiation work permit, dose assessment, and data needs as stated in the work plan and sampling and analysis plan.

Note: Include affected page number Pg SAP/FSP 33, WP-150

Justification and Impacts of Change

The current text is overly restrictive. There are cases where larger diameter casing will be required to achieve adequate contamination control during drilling and other data needs. On the opposite end of the spectrum, drilling in the 600 Area generally does not require large diameter starter casing. Therefore, both safety and cost benefits can be realized by implementing this change. No data needs will be lost.
