**3. Comment:**

600-273 was a mound of red soil located near the Vernita Bridge, in the Riverland Area. During a site visit in 2001, it was determined that a magnet was able to pick up fine particles of the material, indicating high iron content. Similar material in the 100 B/C Area and another Riverland WIDS site (600-69) were examined with Xray fluorescence spectra analysis revealing large iron peaks with iron oxide.

The mound of material was removed as debris in 2011 during the North Slope Footprint Reduction project.

The mound was added to WIDS in 2001 with a recommended classification of Not Accepted.

**4. Is the site a Solid Waste Management Unit?**  Yes  
 No

Any discernible location at the Facility where solid wastes have been placed at any time, irrespective of whether the location was intended for the management of solid or dangerous waste, and includes any area at the Facility at which solid wastes have been routinely and systematically released (for example through spills), and includes dangerous waste treatment, storage, and disposal units.

**5. Does the site need to be addressed under a regulatory program? Check first item that applies.**
