Subject: Proposed Changes for the Cleanup of Buried Wastes at the Hanford Site (M-91, M-16)

Dear Ms. Cusack and Messrs. French and Ceto,

We appreciate the opportunity to provide comments on the proposed action. In general, we support the milestones negotiated and recommend the agencies proceed. However, we do see areas needing additional negotiation. We agree with the consensus advice provided by the Hanford Advisory Board on this matter.

We are encouraged that the proposals provide:

- Enforceable schedules for the retrieval, treatment and storage of Mixed Low Level Waste,
- Increased emphasis on waste treatment, and
- Retrieval, designation and processing of post-1970 transuranic (TRU) waste.

**RECEIVED**  
FEB 13 2004  
**DOE-RL/RLCC**

We believe the proposed milestones fall short in some areas and additional work is needed. M-91 and M-16 are restricted in scope and fail to address the large amount of pre-1970 buried waste, both TRU and non-TRU. If these burial grounds must be exhumed for any reason, it is highly likely that they will result in the generation of a large quantity of TRU waste needing characterization and treatment.

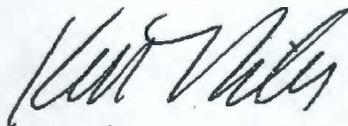

Additional Tri-Party Agreement milestones are needed to provide for characterization, retrieval, treatment and storage/disposition of all buried waste. By limiting the focus as M-91 and M-16 do, the agencies are left with many outstanding issues to resolve later. This makes it difficult to ensure that facilities are available when needed, and are of sufficient capacity and capability to handle all of the wastes that may be sent to them. We encourage the Tri-Parties to immediately begin negotiation on these larger issues to ensure that the funding is available and the plants are built when needed.

The Tri-Parties should:

- Include milestones for quantification, retrieval and disposition of pre-1970 TRU waste and require the work to be fully funded;
- Require DOE to aggressively obtain capacity to handle, characterize, treat and package wastes;
- Focus on the highest risk wastes first; and
- Ensure regulatory compliant storage of all wastes.

If you have questions regarding our comments, please contact Dirk Dunning at the Oregon Department of Energy (503) 378-3187.

Sincerely,

Ken Niles  
Assistant Director
