WASTE SITE RECLASSIFICATION FORM

Operable Unit: 200-EA-1

Control No.: 2017-022

Waste Site Code(s)/Subsite Code(s):

UPR-200-E-101

Reclassification Category: Interim Final

Reclassification Status: Closed Out No Action Rejected
RCRA Postclosure Consolidated None

Approvals Needed: DOE Ecology EPA

Description of current waste site condition:

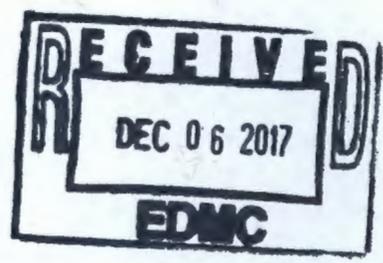

(What is the current physical state of the site? What activities have been performed?)

The UPR-200-E-101 site is an area located immediately north and northwest of the 242B Evaporator. Radiological contamination, including contaminated tumbleweeds, was previously identified at the surface in this area. The area was covered with soil stabilization in 1994, and is now within a larger underground radioactive material area associated with the 241B Tank Farm.

Basis for reclassification:

(How does the site meet the reclassification status?)

The UPR-200-E-101 waste site is being consolidated into the 200-E-120 waste site. The 200-E-120 waste site was created to address contaminated soil associated with releases at the 241B Tank Farm, including areas outside the fenceline perimeter. The UPR-200-E-101 waste site is entirely within the footprint of the 200-E-120 waste site.

WASTE SITE RECLASSIFICATION FORM

Operable Unit: 200-EA-1

Control No.: 2017-022

Waste Site Code(s)/Subsite Code(s):

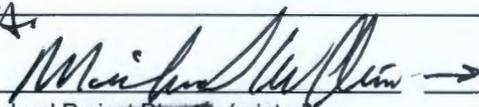

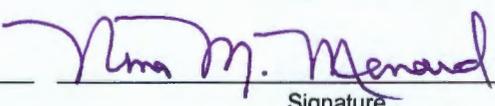

UPR-200-E-101

Project Manager comments:

Waste Site Controls:

Engineered Controls: Yes No Institutional Controls: Yes No O&M Requirements: Yes No

If any of the Waste Site Controls are checked Yes, specify control requirements including reference to the Record of Decision, TSD Closure Letter, or other relevant documents:
