

WASTE SITE RECLASSIFICATION FORM

Operable Unit: 300-FF-2

Control No.: 2013-098

Waste Site Code(s)/Subsite Code(s):

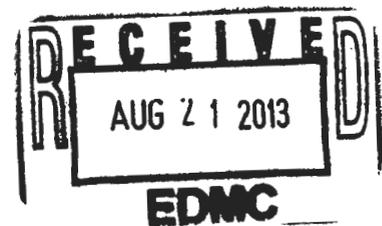

309-TW-2; 309 Holdup Tanks; 309-TW Tank #2

Reclassification Category: Interim Final
Reclassification Status: Closed Out No Action Rejected
 RCRA Postclosure Consolidated None
Approvals Needed: DOE Ecology EPA
Description of current waste site condition:

The 309-TW-2 waste site is synonymous with a component of the 309 Facility and located within the 300-FF-2 Operable Unit. Tank 309-TW-2 is the center tank in the 309 Holdup Tank System. All three tanks are located in a rectangular, underground concrete vault. A chain-link fence surrounds the vault. Pumps, vents, piping, a valve box and the top of the concrete vault are visible above grade. The tanks are empty and the line to the sewer is capped. Residual contamination is present in the tanks and piping. The tank is located at the center of a concrete vault on the north east side of the 309 Building. Contaminated liquid waste from the operation of the Plutonium Recycle Test Reactor was pumped to the holdup tanks prior to discharge to the radioactive liquid waste sewer.

Basis for reclassification:

The entire 309 facility is covered by a *Comprehensive Environmental Response, Compensation, and Liability Act of 1980* removal action and this tank does not represent a separate waste site under the TPA-MP-14 process. TPA-MP-14 Rev. 2 dated 9/1/2011 states that buildings/facilities which do not contain a TSD unit shall not be documented in WIDS. This facility contained no TSD units and does not meet MP-14 criteria. Therefore, the 309-TW-2 waste site has been reclassified as "Rejected".
