Subject: Request for Public Comment - ERDF Leachate De-Listing Proposal

U.S. E.P.A.,

Environmental Restoration Disposal Facility Leachate De-Listing Proposal

What bearing does history have on the potential constituents of materials placed in the ERDF? That is to say, do the people who required "Listing" have a different opinion about the kinds of contaminants that could be placed in, and leach out of the ERDF in the future?

From the information provided in the Focus Sheet, I don't understand what difference de-listing will make. Leachate will continue to be used for dust suppression and waste compaction within the disposal trench and the excess would continue to be conveyed to the 200 Area Effluent Treatment Facility? So what makes de-listing so important?
